Chapter 4 of Holt Chemistry, titled "Periodic Table", provides a thorough look of the periodic table and its elements. The chapter opens with a conversation on the properties of groups and periods, clarifying how the Russian chemist Mendeleev ordered elements by their atomic weight in increasing order<sup>1</sup>. It then delves into the concept of outer electrons and levels of energy of atoms, highlighting the part of these electrons in chemical

reactions and transformations to atoms and molecules.

The chapter further differentiates between transition elements and main elements, expounding on their features and traits. It also explains the idea of ionization energy and its tendencies among groups and periodic groups on the table of elements<sup>1</sup>. The chapter talks about atom's and ionic, and how these can be anticipated based on an element's place on the periodic table.

Electronegativity, which quantifies an element's inclination to attract a pair of bonding electrons, is another crucial theme discussed in this section<sup>1</sup>. The chapter concludes with a dialogue on the relationship diagonally, metallic character, and boiling point of elements.

In terms of practice questions, the chapter provides a range of questions and standardized test preparation resources to bolster the concepts studied. These questions cover a range of themes, from understanding the order of components to investigating the tendencies in the periodic table.
