The Northstar motor, produced by General Motors (GM) from 1993 until 2011, was a high-quality 90° V engine series and GM's first production V-8 with overhead camshafts¹. However, in spite of its first achievement, the Northstar engine has been connected with a number of problems over the years.

One of the most usual troubles is overheating, which can lead to significant harm to the engine block. Another issue is oil use, which can lead to poor fuel efficiency and costly repairs. A lot of Northstar engine operators also note problems with head gaskets, which can result in overheating issues and lead to pricey repairs.

Specifically, the Northstar engine years from 1993 to 2005 have been documented to have leakage troubles, damaged seals, broken head gaskets, extra oil loss, harmed valve cover, malfunctioning water pumps, and carbon buildup. These issues are not major, but the price to resolve the troubles was considerably higher than a lot of other engines due to the detailed engineering.

And no one noticed them, no one heard them, no one identified who they were. They left no sign, no lead, no evidence. They disappeared into the darkness, with the African Star. And the enigma of the missing diamond began.
