### Preservação documental: uma mensagem para o futuro

2012-01-01 Rubens Ribeiro Gonçalves da Silva Este livro, que apresenta muito mais que aspectos técnicos, é resultado do trabalho de profissionais e pesquisadores do campo da preservação documental e patrimonial da humanidade, que, no período de março a abril de 2010, reuniram-se intensamente em uma rede sociotécnica on-line. O primeiro capítulo discute o papel dos documentos na construção da memória social; o segundo apresenta um estudo sobre aspectos interdisciplinares da preservação; o terceiro, por sua vez, trata da temática da repetição e da diferença; o quarto capítulo considera o movimento da ciência em outras direções; o quinto aborda questões sobre a conscientização de manutenção dos acervos; os capítulos seguintes discorrem sobre grandezas físicas presentes em formas de degradação de acervos e reúnem elementos para provar que, sob certos cuidados, o papel pode ser consultado durante várias gerações.

### **Environment and Sustainable Development**

---

2013-10-04 M.H. Fulekar Global society in the 21st century is facing challenges of improving the quality of air, water, soil and the environment and maintaining the ecological balance. Environmental pollution, thus, has become a major global concern. The modern growth of industrialization, urbanization, modern agricultural development and energy generation has resulted in the indiscriminate exploitation of natural resources for fulfilling human desires and needs, which has

contributed in disturbing the ecological balance on which the quality of our environment depends. Human beings, in the truest sense, are the product of their environment. The man-environment relationship indicates that pollution and deterioration of the environment have a social origin. The modern technological advancements in chemical processes/operations have generated new products, resulting in new pollutants in such abundant levels that they are above the self-cleaning capacity of the environment. One of the major issues in recent times is the threat to human lives due to the progressive deterioration of the environment from various sources. The impact of the pollutants on the environment will be significant when the accumulated pollutants load will exceed the carrying capacity of the receiving environment. Sustainable development envisages the use of natural resources, such as forests, land, water and fisheries, in a sustainable manner without causing changes in our natural world. The Rio de Janeiro-Earth Summit, held in Brazil in 1992, focused on sustainable development to encourage respect and concern for the use of natural resources in a sustainable manner for the protection of the environment. This book will be beneficial as a source of educational material to post-graduate research scholars, teachers and industrial personnel for maintaining the balance in the use of natural sources for sustainable development.

Engineering Economics and Cost Estimation is a crucial aspect of any engineering project. It involves present and future economic factors, making it essential to obtain accurate estimates of future costs, benefits, and other economic parameters. Engineers regularly deal with projects whose scale, complexity, and uncertainty call for advanced approaches to planning and budgeting<sup>[2]</sup>[1]. A number of methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates<sup>[1]</sup>[2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Several models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate generally increases as the resources allocated to developing the estimate increase.
