Formulated by Lloyd M. Dunn and Douglas M. Dunn, the test is made to measure vocabulary comprehension for Standard American English. It is fast and simple to carry out, conserving precious time so that attention can be set on implementing intelligent strategies.

The PPVT-4 evaluation content covers a extensive scope of receptive vocabulary grades, spanning from preschool through adulthood. The test items widely sample words that portray 20 content areas (e.g., actions, vegetables, tools), speech parts (nouns, verbs, attributes), and home and educational vocabulary.

The assessment provides two equivalent editions which contain distinct vocabulary words, making sure that the individual has not “learned” the evaluation. One version can be employed prior to intervention implementation to measure individuals’ vocabulary comprehension and the other form can be utilized for re-testing to evaluate and document progress. The PPVT-4 also includes a unique Growth Scale Value (GSV) which is reactive to slight changes with time.
