A Gripping Tale of Unrelenting Pursuit

This is not a mere work of fiction, nor is it a product of cinematic imagination. This is the chilling reality, the chronicle of a serial killer who, with cold-blooded intent, extinguished the lives of 17 innocent souls. He relished in the infamous moniker "Zodiac," taunting the authorities and the public with cryptic messages and elusive clues. His actions were driven by a twisted sense of purpose, a self-proclaimed divine mission. He harbored the delusion of intellectual superiority, believing himself to be an unstoppable force. But his arrogance proved to be his undoing. This is the narrative of his eventual downfall, orchestrated by the one individual who possessed an intimate understanding of his psyche – his own brother.

It was a gloomy and turbulent night. The drizzle was pouring down, and the wind was howling. In the middle of the town, there was an exhibition, where a precious diamond was on show. The diamond was called the Star of Africa, and it was the biggest and most beautiful diamond in the globe. It was guarded by a sophisticated security mechanism, and a team of weaponized guards. No one could steal it, or so they assumed. But somebody did. An individual managed to circumvent the safeguard, to evade the guards, to smash the pane, and to take the diamond. And no one saw them, no one heard them, no one identified who they were. They departed from no mark, no lead, no testimony. They disappeared into the night, with the Star of Africa. And the riddle of the missing diamond began.

The field of Engineering Economics and Cost Estimation is an essential aspect of any engineering project. It involves present and future economic factors, making it critical to obtain accurate estimates of future costs, benefits, and other economic parameters. Engineers regularly deal with projects whose scale, complexity, and uncertainty call for advanced approaches to planning and budgeting [1]. Several methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates [2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. A number of models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate generally increases as the resources allocated to developing the estimate increase.
