The field of Engineering Economics and Cost Estimation is an essential aspect of any engineering project. It involves present and future economic factors, making it essential to obtain dependable estimates of future costs, benefits, and other economic parameters. Engineers often deal with projects whose scale, complexity, and uncertainty call for complex approaches to planning and budgeting[²][1]. Various methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates[¹][2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. A number of models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate usually increases as the resources allocated to developing the estimate increase.

The Mystery of the Missing Diamond

It was a gloomy and stormy night. The rain was pouring down, and the wind was whistling. In the center of the town, there was a exhibition, where a precious diamond was on display. The diamond was called the African Star, and it was the biggest and most stunning diamond in the globe. It was guarded by a sophisticated security mechanism, and a group of armed guards. No one could pilfer it, or so they assumed. But somebody did. Someone succeeded to bypass the protection, to evade the watchmen, to break the pane, and to take the diamond. And no one noticed them, no one overheard them, no one recognized who they were. They departed from no sign, no clue, no evidence. They disappeared into the night, with the African Star. And the enigma of the vanished diamond started.
