Electrochemical Biosensors

2015-01-26 Serge Cosnier Since four decades, rapid detection and monitoring in clinical and food diagnostics and in environmental and biodefense have paved the way for the elaboration of electrochemical biosensors. Thanks to their adaptability, ease of use in relatively complex samples, and their portability, electrochemical biosensors now are one of the mainstays of analytical chemistry. In particular, electrochemistry has played a pivotal role in the development of transduction methods for biological processes and biosensors. In parallel, the explosion of activity in nanoscience and nanotechnology and their huge success have profoundly affected biosensor technology, opening new avenues of research for electrode materials and transduction. This book provides an overview of biosensors based on amperometry, conductimetry, potentiometry, square-wave voltammetry, impedance, and electrochemiluminescence and describes the use of ultramicroelectrodes for the real-time monitoring and understanding of exocytosis. Areas of particular interest are the use of silver and gold nanoparticles for signal amplification, photocurrent transduction, and aptamer design. Moreover, advanced insights in the innovative concept of self-powered biosensors derived from biofuel cells are also discussed.

Circulating Molecular Biomarkers: Next-Generation Tools for Monitoring Minimal Residual Disease in Cancer Patients

2023-08-16 Zohreh Amoozgar Traditional cancer diagnosis relies on tissue biopsy, blood testing as well as medical imaging. By the detection moment, in most cases the tumor size may reach several millimeters and the risk of distant metastasis is unavoidable. Even, following drug treatment, there is no accurate and timely way to follow up the success of treatment. New reliable tumor-specific biomarkers/tools that allow non-invasive early cancer detection as well as monitoring of anti-cancer therapeutic regime is highly demanded. To tackle limitations of traditional cancer management, liquid biopsy has emerged which screen bodily fluids using ultrasensitive biosensing systems capable of simultaneous capturing and studying horizontal gene transfer (HGT) materials including circulating tumor cells (CTCs), exosomes, cell-free DNA, and apoptotic bodies. These are messengers and/or delivery systems by which tumor cells are communicating as well as transforming/sharing new phenotypes with each other resulting in drug resistance, distant metastatic outbreaks, and cancer recurrence. Acting as next-generation prognostic and therapeutic tools call for understanding the molecular mechanisms by which HGT works to tran

Early Detection of Breast Cancer

2012-12-06 S. Br nner The enormous expansion seen over the last decade in the mammo graphic detection of breast cancer lesions, especially the use of screen ing procedures for the early detection of clinically unsuspected tumors, has made it necessary to summarize the experience made by various centers in the world. The 2nd International Copenhagen Symposium on Detection of Breast Cancer afforded an opportunity of gathering scientists from all over the world to discuss the various problems of early breast cancer detection with special reference to screening procedures. This book forms a synthesis of the information presented by leading scientists from many of the world's mammo graphic centers, particularly those in Sweden and the USA. Hence, the reader will have the opportunity to study the outstanding work carried out by various institutes and centers of breast cancer screening. It is our sincere hope that a study of this volume will encourage other scientists to join in the work on screening procedures. S. Brunner B. Langfeldt P. E. Andersen Contents S. A. Emphasizes the Importance of Volatile Markers in Early Cancer Diagnosis Presents noninvasive early molecular markers in urological cancers Describes gynecological and endocrine cancer markers Details noninvasive markers of breast, ovarian, cervical, and thyroid cancers Addresses hematological malignancies Contains information on noninvasive molecular markers in myelodysplastic syndromes, acute myeloid leukemia, Hodgkin's lymphoma, and multiple myeloma Provides comprehensive information on diagnostic and prognostic biomarkers in cutaneous melanoma This text considers molecular technologies for biomarker development, noninvasive or minimally invasive sources of molecular markers, and quality control and ethical issues in cancer biomarker discovery.

Molecular Diagnostics of Cancer

2012-12-06 Christoph Wagener Present and potential future applications of new diagnostic strategies basedon the direct or indirect detection of cancer genes are delineated in this volume. Among the methodological aspects covered are enzymatic target amplification by the polymerase chain reaction and related techniques, DNA fingerprinting, transfer of putative cancer genes in appropriate recipient cells, and recent developments inthe application of monoclonal antibodies in immunohistochemistry and immunoscintigraphy. The diagnostic and functional implications of mutations in cancer genes such as ras and p53 are described. The characterization of cancer genes and their products is correlated with growth control anddissemination of tumour cells by in vitro or clinical evidence. The contributions in the present volume update the information available on established or newly described cancer genes, and may help manage the transition from basic research to clinical practice.

The Northstar motor, produced by General Motors (GM) from 1993 until 2011, was a premium 90° V engine range and GM's first production V-8 with overhead camshafts¹. However, in spite of its first achievement, the Northstar engine has been associated with a variety of troubles over the years.

One of the most usual issues is getting too hot, which can cause substantial destruction to the engine block. A different trouble is oil consumption, which can result in bad fuel efficiency and pricey repairs. Numerous Northstar engine owners also report problems with head gaskets, which can lead to getting too hot troubles and lead to costly repairs.

Specifically, the Northstar engine years from 1993 to 2005 have been noted to have leakage issues, broken seals, damaged head gaskets, extra oil loss, damaged valve cover, faulty water pumps, and carbon collection. These troubles are not major, but the price to repair the problems was significantly greater than most other engines due to the detailed engineering.

Investment cancer biomarkers minimal and noninvasive early diagnosis.The field of Engineering Economics and Cost Estimation is a crucial aspect of any engineering project. It involves present and future economic factors, making it essential to obtain reliable estimates of future costs, benefits, and other economic parameters. Engineers frequently deal with projects whose scale, complexity, and uncertainty call for advanced approaches to planning and budgeting^[1]. A number of methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates^[2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. A number of models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate usually increases as the resources allocated to developing the estimate increase.
