Global Supply Chain Management and International Logistics

2008-12-19 Alan E. Branch The development of international trade is driven by international logistics and management and the provision of the global supply chain. The ultimate objective of global supply chain management is to link the market place, distribution network, manufacturing/processing/assembly process, and procurement activity in such a way that customers are serviced at a higher level yet lower cost. Overall this has introduced a new breed of management in a computer literate environment operating in a global infrastructure. Addressing this complex topic, Alan Branch's new book fulfills two clear objectives: to provide a concise, standard work on the subject, written in lucid language that embraces all the ingredients of a notoriously complex subject with a strategic focus to extol best practices and focus on all areas of the industrial and consumer sectors and their interface with changing international market needs. Until now, no book dedicated to international logistics and supply chain management was available. Practically-oriented, this book features numerous case studies and diagrams from logistic operators. An ideal resource for management students, academics and managers who need a succinct treatment of global operations, Branch's book skillfully illustrates his ideas in practice. It is a book which should be on the shelf of every practitioner and student of the subject. Also available from Routledge: Elements of Shipping, Eighth Edition, Alan E. Branch. The Manual for Conquering Deadly Sin will help you do just that in your own life. In any struggle, you must know your enemy. Hence, Part I : Defines sin and distinguishes between mortal and venial sins. - Examines each of the classical seven deadly sins: lust, gluttony, avarice, sloth, anger, envy, and pride. - Reveals their causes, manifestations, and more. - Provides specific advice and remedies for conquering each deadly sin in your own life. - Identifies those corresponding virtues which must be cultivated in order to rid yourself of deadly sin. Part II, features a compilation of passages from Church teaching and Scripture, along with quotes from the saints that complement and give life to the reflections in Part I. As Fr. Koliński makes clear-- the truest medicine is found in the sacramental life of the Church. Operations Management in Automotive Industries

2013-10-23 Marco Gobetto This book has proved its worth over the years as a text for courses in Production Management at the Faculty of Automotive Engineering in Turin, Italy, but deserves a wider audience as it presents a compendium of basics on Industrial Management, since it covers all major topics required. It treats all subjects from product development and "make or buy"-decision strategies to the manufacturing systems setting and management through analysis of the main resources needed in production and finally exploring the supply chain management and the procurement techniques. The very last chapter recapitulates the previous ones by analyzing key management indicators to pursue the value creation that is the real purpose of every industrial enterprise. As an appendix, a specific chapter is dedicated to the basics of production management where all main relevant definitions, techniques and criteria are treated, including some numerical examples, in order to provide an adequate foundation for understanding the other chapters. This book will be of use not only to Automotive Engineering students but a wide range of readers who wish to gain insight in the world of automotive engineering and the automotive industry in general.

Speaking about Godard

1998-07-01 Kaja Silverman Probably the most prominent living filmmaker, and one of the foremost directors of the postwar era, Jean Luc-Godard has received astonishingly little critical attention in the United States. With Speaking about Godard, leading film theorist Kaja Silverman and filmmaker Harun Farocki have made one of the most significant contributions to film studies in recent memory: a lively set of conversations about Godard and his major films, from Contempt to Passion. Combining the insights of a feminist film theorist with those of an avant-garde filmmaker, these eight dialogues--each representing a different period of Godard's film production, and together spanning his entire career--get at the very heart of his formal and theoretical innovations, teasing out, with probity and grace, the ways in which image and text inform one another throughout Godard's oeuvre. Indeed, the dialogic format here serves as the perfect means of capturing the rhythm of Godard's ongoing conversation with his own medium, in addition to shedding light on how a critic and a director of films respectively interpret his work. As it takes us through Godard's films in real time, Speaking about Godard conveys the sense that we are at the movies with Silverman and Farocki, and that we, as both student and participant, are the ultimate beneficiaries of the performance of this critique. Accessible, informative, witty, and, most of all, entertaining, the conversations assembled here form a testament to the continuing power of Godard's work to spark intense debate, and reinvigorate the study of one of the great artists of our time.

Automotive Embedded Systems Handbook

2017-12-19 Nicolas Navet A Clear Outline of Current Methods for Designing and Implementing Automotive Systems Highlighting requirements, technologies, and business models, the Automotive Embedded Systems Handbook provides a comprehensive overview of existing and future automotive electronic systems. It presents state-of-the-art methodological and technical solutions in the areas of in-vehicle architectures, multipartner development processes, software engineering methods, embedded communications, and safety and dependability assessment. Divided into four parts, the book begins with an introduction to the design constraints of automotive-embedded systems. It also examines AUTOSAR as the emerging de facto standard and looks at how key technologies, such as sensors and wireless networks, will facilitate the conception of partially and fully autonomous vehicles. The next section focuses on networks and protocols, including CAN, LIN, FlexRay, and TTCAN. The third part explores the design processes of electronic embedded systems, along with new design methodologies, such as the virtual platform. The final section presents validation and verification techniques relating to safety issues. Providing domain-specific solutions to various technical challenges, this handbook serves as a reliable, complete, and well-documented source of information on automotive embedded systems.
