The field of Engineering Economics and Cost Estimation is a vital aspect of any engineering project. It involves present and future economic factors, making it vital to obtain accurate estimates of future costs, benefits, and other economic parameters. Engineers regularly deal with projects whose scale, complexity, and uncertainty call for complex approaches to planning and budgeting [1]. Various methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates [2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Several models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating.
