The chapter opens with a discussion on the traits of groupings and periods, explaining how the Russian chemist Mendeleev ordered elements by their atomic weight in increasing order¹. It then delves into the notion of outer electrons and energy levels of atoms, highlighting the function of valence electrons in reactions and transformations to atomic structures and molecules.

The chapter moreover differentiates between transition metals and main group elements, elaborating on their properties and traits. It also clarifies the notion of energy of ionization and its trends among groups and periods on the periodic table¹.
