### Machine Learning Paradigms

2018-07-03 George A. Tsihrintzis This book explores some of the emerging scientific and technological areas in which the need for data analytics arises and is likely to play a significant role in the years to come. At the dawn of the 4th Industrial Revolution, data analytics is emerging as a force that drives towards dramatic changes in our daily lives, the workplace and human relationships. Synergies between physical, digital, biological and energy sciences and technologies, brought together by non-traditional data collection and analysis, drive the digital economy at all levels and offer new, previously-unavailable opportunities. The need for data analytics arises in most modern scientific disciplines, including engineering; natural-

Bichitra: The Making of an Online Tagore Variorum

2016-02-12 Sukanta Chaudhuri

This book documents the creation of the Bichitra Online Tagore Variorum, a publicly accessible database of Rabindranath Tagore's complete works in Bengali and English totaling some 140,000 pages of primary material. Chapters cover innovative aspects of the site, all replicable in other projects: a hyperbibliography; a search engine and hyperconcordance working across the database; and a unique collation program comparing variant texts at three levels. There are also chapters on the special problems of processing manuscripts, and on planning the website. Early chapters take readers through the history of the project, an overview of Tagore's works, and the Bengali writing system with the challenges of adapting it to electronic form. The name

Bengali, alludes both to the great variety of Tagore's works and to their various stages of composition. Beyond their literary excellence, they are notable for their sheer quantity, the number of variant forms of a great many items, and their afterlife in translation, often the poet's own. Seldom if ever has the same writer revised his material and recast it across genres on such a scale. Tagore won the Nobel Prize in 1913. By its value-added presentation of this range of material, Bichitra can be a model for future databases covering an author's complete works or other major corpus of texts. It offers vastly expanded access to Tagore's writings, and enables new kinds of research including computational text analysis. The "book of the website" shows in technical and human terms how researchers with interests in art, literature and technology can collaborate on cultural informatics projects.
