Chapter 4 of the Holt Chemistry textbook, titled "Periodic Table", provides a thorough overview of the table of elements and its constituents. The chapter starts

with a discussion on the traits of groupings and periods, clarifying how the Russian chemist Mendeleev ordered elements by their weight in increasing order<sup>1</sup>. It then delves into the concept of valence electrons and levels of energy of atoms, highlighting the function of these electrons in reactions and alterations to atomic structures and molecular structures.

The chapter further distinguishes between transition metals and main elements, elaborating on their features and characteristics. It also explains the notion of ionization energy and its patterns among groupings and periods on the periodic table<sup>1</sup>. The chapter discusses atomic and radii, and how these can be forecasted based on an atom's position on the periodic table.

The concept of electronegativity, which measures an atom's inclination to attract a pair of bonding electrons, is another key theme discussed in this section<sup>1</sup>. The chapter finishes with a conversation on the relationship diagonally, character of metals, and boiling point of elements.

In terms of questions, the chapter provides a range of practice questions and standardized test preparation supplies to reinforce the notions studied. These exercises cover a variety of subjects, from grasping the organization of constituents to investigating the trends in the table of elements.
