Chapter 4 of the Holt Chemistry textbook, titled “Periodic Table”, provides a detailed overview of the periodic table and its elements. The chapter begins with a discussion on the properties of groupings and periods, clarifying how Russian chemist Dmitri Mendeleev organized elements by their weight in ascending order¹. It then dives into the notion of outer electrons and levels of energy of atoms, underscoring the part of these electrons in chemical reactions and changes to atoms and molecular structures.

The chapter further differentiates between transition metals and main elements, detailing on their properties and attributes. It also explains the concept of ionization energy and its tendencies among groups and periods on the periodic table¹. The chapter converses about atom’s and radii, and how these can be anticipated based on an element’s position on the periodic table. Electronegativity, which measures an atom’s inclination to pull a bonding pair of electrons, is another crucial topic discussed in this chapter¹. The chapter finishes with a discussion on the diagonal relationship, metallic character, and point of boiling of components.
