Cambridge International AS & A Level Biology Student's Book 2nd edition 2020-05-04 C. J. Clegg This title is endorsed by Cambridge Assessment International Education to support the full syllabus for examination from 2022. Confidently navigate the updated Cambridge International AS & A Level Biology (9700) syllabus with a structured approach

ensuring that the link between theory and practice is consolidated, scientific skills are applied, and analytical skills developed. - Enable students to monitor and build progress with short 'self-assessment' questions throughout the student text, with answers at the back of the book, so students can check their understanding as they work their way through the chapters. - Build scientific communication skills and vocabulary in written responses with a variety of exam-style questions. - Encourage understanding of historical context and scientific applications with extension boxes in the student text. - Have confidence that lessons cover the syllabus completely with a free Scheme of Work available online. - Provide additional practice with the accompanying write-in Practical Skills Workbooks, which once completed, can also be used to recap learning for revision.

OCR as and a Level Computer Science 2016-09-12 P M Heathcote The aim of this book is to provide detailed coverage of the topics in the new OCR AS and A Level Computer Science specifications H046 / H446. The book is divided into twelve sections and within each section, each chapter covers material that can comfortably be taught in one or two lessons. Material that is applicable only to the second year of the full A Level is clearly marked. Sometimes this may include an entire chapter and at other times, just a small part of a chapter. Each chapter contains exercises and questions, some new and some from past examination questions. Answers to all these are available to teachers only in a free Teacher's Pack which can be ordered from our website www.pgonline.co.uk. This book has been written to cover the topics which will be examined in the written papers at both AS

and A Level. Sections 10, 11 and 12 relate principally to problem solving skills, with programming techniques covered in sufficient depth to allow students to answer questions in Component 02. Pseudocode, rather than any specific programming language, is used in the algorithms given in the text. Sample Python programs which implement many of the algorithms are included in a folder with the Teacher's Pack.

Contemporary contexts are discussed throughout enhancing the relevance and interest for learners.

Biotechnology and Cloning 2011 Lisa Firth
Recent advances in science have provoked debate about where cloning will take us. This book considers the social and ethical considerations of cloning, including whether cloning humans is acceptable, whether people are willing eat cloned food, and whether we should take advantage of medical therapies associated with cloning.

Evolution and Disease 1915 James Thomas Charles Nash

Antibiotics and Antibiotic Resistance 2016 Lynn L. Silver One of the greatest medical accomplishments of the past century was the introduction of antibiotics into the clinic. However, the use of these lifesaving drugs rapidly led to the emergence of antibiotic-resistant pathogens, which have become increasingly difficult and expensive to eradicate. Antibiotic resistance now severely limits our ability to curb infectious diseases

and is therefore a major global health concern. Written and edited by experts in the field, this collection from Cold Spring Harbor Perspectives in Medicine examines the major classes of antibiotics, together with their modes of action and mechanisms of resistance. Well-established antibiotics (e.g., -lactams) are covered, as are lesser-used drugs that have garnered recent interest (e.g., polymyxins) and new compounds in the development pipeline. The contributors describe the mechanisms by which the agents disrupt cell wall assembly and maintenance, membrane synthesis and integrity, DNA and RNA metabolism, protein synthesis, and the folate cycle. They also examine how bacteria evolve ways to resist these disruptions by modifying the drug or drug target or by controlling access of the drug to the cell. The authors also explore the environmental origins of antibiotic

resistance and provide guidance on the rational development and therapeutic application of new antibiotics. This volume is therefore an essential reference for microbiologists, pharmacologists, infectious disease biologists, and all concerned with this medical crisis.

Managing Worry and Anxiety 2020-01-21
Jean Holthaus Scripture says "be anxious for nothing," yet most of us find ourselves increasingly worried and anxious--about our families, our jobs, our finances, our security, and so much more. We're even worried about our level of anxiety! Integrating both the psychological and spiritual aspects of anxiety, therapist Jean Holthaus offers this research-driven and faith-informed approach to understanding why we experience anxiety and shows us how to effectively manage it by developing three essential skills: - living in the present

moment - suspending judgment - believing yourself to be competent and equipped by God Our world is never going to be a completely safe and understandable place. But with Holthaus's help, our hearts and minds can experience greater and lasting peace.

(Wellington, January 1994). The papers, rigorously scrutinized by an international board of referees, cover some recent aspects of current research in earthquake hazard and seismic risk. They address the algorithms and methodology used in seismological applications, the reliability of these techniques with the decreasing level of probability and uncertainty associated with various seismotectonic settings, the physical and statistical nature of earthquake occurrences, strong ground motions and effects of surface seismogeological conditions. A special effort has been made to include papers that illustrate the assessment of earthquake hazard and seismic risk through applications at sites in either inter-plate or intra-plate tectonic settings. Of particular interest is hazard assessment in regions of rare large earthquakes. The book is suitable for those interested in earthquake hazard and seismic

risk research as well as a more general audience of seismologists, geophysicists and Earth scientists. It is also useful for authorities responsible for public safety and natural hazard mitigation plans and for insurance companies.

The Language of Genes 1995-06-01 Steve Jones Did you know that two of every three people reading this book will die for reasons connected with the genes they carry? That our DNA gradually changes with age, which is why older parents are more likely to give birth to children with genetic defects than younger parents? That each individual is a kind of living fossil, carrying within a genetic record that goes back to the beginnings of humanity? In *The Language of Genes*, renowned geneticist Steve Jones explores the meanings and explodes the myths of human genetics, offering up an extraordinary picture of what we are, what we were, and what we may become. "An essential book for anyone interested in the development and possible future of our

species.”—Kirkus Reviews “This is one of the most insightful books on genetics to date and certainly the most entertaining.”—The Wall Street Journal

Sasanian Persia 2017-06-05 Eberhard Sauer
Details Persias growing military and economic power in the late antique world
The Sasanian Empire (3rd-7th centuries) was one of the largest empires of antiquity, stretching from Mesopotamia to modern Pakistan and from Central Asia to the Arabian Peninsula. This mega-empire withstood powerful opponents in the steppe and expanded further in Late Antiquity, whilst the Roman world shrunk in size. Recent research has revealed the reasons for this success: notably population growth in some key territories, economic prosperity, and urban development, made possible through investment in agriculture and military infrastructure on a scale

unparalleled in the late antique world. Our volume explores the empires relations with its neighbours and key phenomena which contributed to its wealth and power, from the empires armed forces to agriculture, trade and treatment of minorities. The latest discoveries, notably major urban foundations, fortifications and irrigations systems, feature prominently. An empire whose military might and culture rivalled Rome and foreshadowed the caliphate will be of interest to scholars of the Roman and Islamic world. Challenges our Eurocentric world view by presenting a Near-Eastern empire whose urban culture and military apparatus rivalled that of Rome Covers the latest discoveries on foundations, fortifications and irrigation systems Includes case studies on Sasanian frontier walls and urban culture in the Sasanian Empire

Francis Crick 2012-01-17 Matt Ridley Francis Crick—the quiet genius who led a revolution in biology by discovering, quite literally, the secret of life—will be bracketed with Galileo, Darwin, and Einstein as one of the greatest scientists of all time. In his fascinating biography of the scientific pioneer who uncovered the genetic code—the digital cipher at the heart of heredity that distinguishes living from non-living things—acclaimed bestselling science writer Matt Ridley traces Crick's life from middle-class mediocrity in the English Midlands through a lackluster education and six years designing magnetic mines for the Royal Navy to his leap into biology at the age of

thirty-one and its astonishing consequences. In the process, Ridley sheds a brilliant light on the man who forever changed our world and how we understand it.
