CINEMA BHOJPURI Avijit Ghosh 2010-05-22 Cruel landlords; crafty moneylenders; corrupt politicians; righteous heroes and uninhibited dancing girls—just some of the characters of a successful Bhojpuri film. Often considered kitschy and crude by ‘polite’ society; Bhojpuri cinema has had astounding success from the 1990s onwards; which can only be explained by its overwhelming popularity among the other half of new India. What is it that makes Bhojpuri cinema tick? What is the logic of its aesthetics? And most importantly; how did these regional language films become a profitable industry? Answering many of these questions and written with a deep sensitivity for the genre; Cinema Bhojpuri is the one of the first studies of the history and themes of Bhojpuri cinema—the poor cousin of Bollywood. Basing his research on extensive personal interviews and analyses of trade journals from the 1960s onwards; Avijit Ghosh’s fascinating study unveils much about Bhojpuri cinema—from the making of the first Bhojpuri film; Ganga Maiya Tohe Piyari Chhachhaib; to the terrible lows of the 1980s when Bhojpuri cinema all but died; and right down to the present when the breathlessly-paced masala entertainers of Manoj Tiwari; Ravi Kishan and Dinesh Lal Yadav ‘Nirahua’ gave life to what Hindi cinema had left behind—rural India.

Machine Learning in Finance Matthew F. Dixon 2020-07-01 This book introduces machine learning methods in finance. It presents a unified treatment of machine learning and various statistical and computational disciplines in quantitative finance, such as financial econometrics and discrete time stochastic control, with an emphasis on how theory and hypothesis tests inform the choice of algorithm for financial data modeling and decision making. With the trend towards increasing computational resources and larger datasets, machine learning has grown into an important skillset for the finance industry. This book is written for advanced graduate students and academics in financial econometrics, mathematical finance and applied statistics, in addition to quants and data scientists in the field of quantitative finance. Machine Learning in Finance: From Theory to Practice is divided into three parts, each part covering theory and applications. The first presents supervised learning for cross-sectional data from both a Bayesian and frequentist perspective. The more advanced material places a firm emphasis on neural networks, including deep learning, as well as Gaussian processes, with examples in investment management and derivative modeling. The second part presents supervised learning for time series data, arguably the most common data type used in finance with examples in trading, stochastic volatility and fixed income modeling. Finally, the third part presents reinforcement learning and its applications in trading, investment and wealth management. Python code examples are provided to support the readers’ understanding of the methodologies and applications. The book also includes more than 80 mathematical and programming exercises, with worked solutions available to instructors. As a bridge to research in this emergent field, the final chapter presents the frontiers of machine learning in finance from a researcher’s perspective, highlighting how many well-known concepts in statistical physics are likely to emerge as important methodologies for machine learning in finance.

Infectious Disease Informatics Vitali Sintchenko 2014-09-11 There are several reasons to be interested in infectious disease informatics. First, it is of practical significance to understand how the technology revolution has been reshaping infectious disease research and management, as rapid advances in geno- associated technologies have changed the very nature of the questions we can ask. Second, the emerging evidence has confirmed that the application of information technologies in healthcare enhances our ability to deal with infectious diseases. Finally, the implementation of electronic health records has created new and exciting opportunities for secure, reliable and ethically sound clinical decision support and biosurveillance guided by the genomics of pathogens with epidemic potential. This volume addresses the growing need for the critical overview of recent developments in microbial genomics and biomedical informatics relevant to the control of infectious diseases. This field is rapidly expanding, and attracts a wide audience of clinicians, public health professionals, biomedical researchers and computer scientists who are fascinated by the complex puzzle of infectious disease. This book takes a multidisciplinary approach with a calculated move away from the traditional health informatics topics of computerized protocols for antibiotic p- scribing and pathology testing. Instead authors invite you to explore the emerging frontiers of bioinformatics–guided pathogen profiling, the system microbiolo- enabled intelligent design of new drugs and vaccines, and new ways of real-time biosurveillance and hospital infection control. Throughout the book, references are made to different products supplied by public sources and commercial vendors, but this is not an endorsement of these products or vendors.

In Human behavior, including stress and other factors, plays an important role in neoplasia, although too little is known addition, variables which affect cancer development as well on the reasons for such development. Carcinogens, which as some endogenous factors can be better delineated help initiate the neoplastic process, may be either synthetic through such investigations. The topics of this volume encompass premalignant non or naturally-occurring. Cancer causation may be ascribed to invasive lesions, species-specific aspects of carcinogenicity, certain chemicals, physical agents, radioactive materials, viruses, parasites, the genetic make-up of the organism, and radiation, viruses, a quantum theory of carcinogenesis, onco bacteria. Humans, eumetazoan animals and vascular plants genes, and selected environmental carcinogens. are susceptible to the first six groups of cancer causes, whee ras the last group, bacteria, seems to affect only vascular plants. Neoplastic development may begin with impairment ofImdy defenses by a toxic material (carcinogen) which acts as an initiator, followed by promotion and progression to an overt neoplastic state. Thinking with Things Esther Pasztor 2005-08-01 "At its heart, Pasztor's thesis is simple and yet profound. She asserts that humans create things (some of which modern Western society chooses to call "art") in order to work out our ideas - that is, we literally think with things. Pasztor draws on examples from many societies to argue that the art-making impulse is primarily cognitive and only secondarily aesthetic. She demonstrates that "art" always reflects the specific social context in which it is created, and that as societies become more complex, their art becomes more rarefied."--Jacket.
