Architects of American Air Supremacy Dik A. Daso 2002-04-01 The United States Air Force is the most technologically advanced service in the world. Stealth, precision, global range, and space systems are only a few of the hallmarks of the USAF technology. Airborne laser weapons, super-accurate sensors, and hypersonic aircraft are already in the early stages of development. Creations such as these are not the product of stagnant minds or idle hands. It was in 1944 that General of the Army Henry H. "Hap" Arnold established the Army Air Forces (AAF) Scientific Advisory Group (SAG) under the direction of Dr. Theodore von Karman. The SAG meticulously created the first science and technology forecast ever accomplished in military history. The study predicted many of the developments in aviation technology which, today, most Americans take for granted. Some of the more outstanding of these are supersonic flight, precision weaponry, accurate radar, and the development of

intercontinental ballistic missiles (ICBM). In *Architects of American Air Supremacy*, Dik Daso tells the story of the founding of the scientific and technical base of today's USAF. But this work is much more than simply a history of technology. The SAG was a culminating point reached only after many years of building interpersonal relationships, developing industrial bonds, and tapping the wisdom of America's most influential scientists. In large measure this book reflects the symbiotic nature of the military and the society which it serves. This book is an introduction to the very nature of the USAF - a service founded in aviation science and technology and built by great commanders, innovators, and dedicated men and women in the service of their nation. The Secret Sean Kelly & Ted Mann & Byron Preiss 2014-03-18 The tale begins over three-hundred years ago, when the Fair People—the goblins, fairies, dragons, and other fabled and fantastic creatures of a dozen lands—fled the Old World for the New, seeking haven from the ways of Man. With them came their precious jewels: diamonds, rubies, emeralds, pearls... But then the Fair People vanished, taking with them their twelve fabulous treasures. And they remained hidden until now... Across North America, these twelve treasures, over ten-thousand dollars in precious jewels in 1982

dollars, are buried. The key to finding each can be found within the twelve full-color paintings and verses of THE SECRET. Are you smart enough? THE SECRET: A TREASURE HUNT was published in 1982. The year before publication, the author and publisher Byron Preiss had traveled to 12 locations in the continental U.S. (and possibly Canada) to secretly bury a dozen ceramic casques. Each casque contained a small key that could be redeemed for one of 12 jewels Preiss kept in a safe deposit box in New York. The key to finding the casques was to match one of 12 paintings to one of 12 poetic verses, solve the resulting riddle, and start digging. Since 1982, only two of the 12 casques have been recovered. The first was located in Grant Park, Chicago, in 1984 by a group of students. The second was unearthed in 2004 in Cleveland by two members of the Quest4Treasure forum.

The picture we are presenting here of the current theory in phenolic resin chemistry and the technical application of phenolic resins is based on day-to-day experiences in research, production and marketing, however, with the background of economic relevance. This book, then, is not to be regarded as a systematic collection and evaluation of the literature, although the literature up to July, 1978 has generally been taken into consideration. The audience to which this book is directed is wide-ranging: chemists, engineers, marketing professionals and students. We show where the first fully synthetic polymers, phenolic resins, stand today and what their future is.
