Blue Space, Health and Wellbeing Ronan Foley 2019-03-04 Health geography makes critical contributions to contemporary and emerging interdisciplinary agendas of nature-based health and health-enabling places. Couched in theory and critical empirical work on nature and health, this book addresses questions on the relationships between water, health and wellbeing. Water and blue space is a key focus in current health geography research and a new hydrophilic turn has emerged with a particular focus on the aspects of water which are affective, life-enhancing and health-enabling. Research considers the benefits and risks associated with blue space, from access to safe and clean water in the Global South, to health promoting spaces found around urban waters, to the deeper implications of climate change for water-based livelihoods and indigenous cultures. This book reflects recent theoretical debates within health geography, drawing from research in the public health, anthropology and psychology sectors. Broad thematic sections focus on interdisciplinary, experiential and equity-based elements of blue space, with individual chapters that consider indigenous and global health, water's healing properties, leisure and blue yogic culture, coastal landscapes, surfing, swimming and sailing, along with more contested hydrophobic dimensions. The interdisciplinary lens means this book will be extremely valuable to human geographers and cultural geographers. It will also appeal to practitioners and researchers interested in environmental health, leisure and tourism, health inequalities and public health more broadly.

Encyclopedia of World Problems and Human Potential Union of International Associations 1994 The destruction of wildlife habitats ... organized crime ... AIDS ... illiteracy ... acid rain -- these are among the 130,000 topics documented and discussed in the new edition of the Encyclopedia. But its truly unique goal is to present this complex set of issues in ways that facilitate an organized response. To this end, the book also focuses on the complex relationship between problems and society's own ideological relationship with these problems. How do human priorities and perceptions aggravate or enable problems? What are the established and alternative responses? The Encyclopedia contains over 158,000 cross-references between entries, an extensive 91,000 practical key term index, bibliographies, and full cross-referencing to the Yearbook of International Organizations. For anyone concerned with the world community, here are the means to explore and participate in today's most crucial endeavors. Volume 2, Human Potential: Transformation and Values, contains 7,700 entries reflecting a spectrum of problem-solving approaches based on such human development issues as self-learning, creativity, and modes of awareness. The volume also focuses on specific religious beliefs, value systems, and thought patterns.

Social History of Nineteenth Century Mathematics Mehrtens 2012-12-06 During the last few decades historians of science have shown a growing interest in science as a cultural activity and have regarded science more and more as part of the general developments that have occurred in society. This trend has been less evident among historians of mathematics, who traditionally concentrate primarily on tracing the development of mathematical knowledge itself. To some degree this restriction is connected with the special role of mathematics compared with the other sciences; mathematics typifies the most objective, most coercive type of knowledge, and therefore seems to be least affected by social influences. Nevertheless, biography, institutional history and history of national developments have long been elements in the historiography of mathematics. This interest in the social aspects of mathematics has widened recently through the study of other themes, such as the relation of mathematics to the development of the educational system. Some scholars have begun to apply the methods of historical sociology of knowledge to mathematics; others have attempted to give a Marxist analysis of the connection between mathematics and productive forces, and there have been philosophical studies about the communication processes involved in the production of mathematical knowledge. An interest in causal analyses of historical processes has led to the study of other factors influencing the development of mathematics, such as the formation of

mathematical schools, the changes in the professional situation of the mathematician and the general cultural milieu of the mathematical scientist.

The Future Internet Jenifer Winter 2015-12-14 Readers seeking to gain a handle on the internet's global expansion will find this book rich in scholarly foundations combined with cutting-edge discussion of emerging ICTs and services and the complex societal contexts in which they are embedded. To explore possibilities to the fullest extent, a sociotechnical systems approach is employed, focusing on the interplay of technical, social, cultural, political, and economic dynamics to explore alternative futures (ones that are not part of the dominant discourse about the internet). These shared perspectives are not well addressed elsewhere in current discussions. Awareness of these dynamics, and the fluidity of the future, is important, as humankind moves forward into the uncertain future. Due to the sociotechnical complexity of the Internet, policymakers, businesspeople, and academics worldwide have struggled to keep abreast of developments. This volume's approach is intended to stimulate dialogue between academics and practitioners on a topic that will affect most aspects of human life in the near-term future.

The Scottish Book R. Daniel Mauldin 2015-11-26 The second edition of this book updates and expands upon a historically important collection of mathematical problems first published in the United States by Birkhäuser in 1981. These problems serve as a record of the informal discussions held by a group of mathematicians at the Scottish Café in Lwów, Poland, between the two world wars. Many of them were leaders in the development of such areas as functional and real analysis, group theory, measure and set theory, probability, and topology. Finding solutions to the problems they proposed has been ongoing since World War II, with prizes offered in many cases to those who are successful. In the 35 years since the first edition published, several more problems have been fully or partially solved, but even today many still remain unsolved and several prizes remain unclaimed. In view of this, the editor has gathered new and updated commentaries on the original 193 problems. Some problems are solved for the first time in this edition. Included again in full are transcripts of lectures given by Stanislaw Ulam, Mark Kac, Antoni Zygmund, Paul Erdős, and Andrzej Granas that provide amazing insights into the mathematical environment of Lwów before World War II and the development of The Scottish Book. Also new in this edition are a brief history of the University of Wrocław's New Scottish Book, created to revive the tradition of the original, and some selected problems from it. The Scottish Book offers a unique opportunity to communicate with the people and ideas of a time and place that had an enormous influence on the development of mathematics and try their hand on the unsolved problems. Anyone in the general mathematical community with an interest in the history of modern mathematics will find this to be an insightful and fascinating read.

Der betrogene Patient Gerd Reuther 2019-06-17 Nie waren die Heilungsversprechen größer als heute und doch ist die ärztliche Behandlung zu unserer häufigsten Todesursache geworden. Wer den Therapieempfehlungen der Mediziner rückhaltlos vertraut, schadet sich häufiger, als er sich nützt. Erschreckend viele Behandlungen sind ohne nachgewiesene Wirksamkeit und oft wäre das Abwarten des Spontanverlaufs sogar wirksamer und nachhaltiger. Schonungslos ehrlich seziert Dr. med. Gerd Reuther nach 30 Jahren als Arzt seinen Berufsstand. Er deckt auf, dass die Medizin häufig nicht auf das langfristige Wohlergehen der Kranken abzielt, sondern in erster Linie die Kasse der Kliniken und Praxen füllen soll. Seine Abrechnung ist aber nicht hoffnungslos, denn er zeigt auch auf, wie eine neue, bessere Medizin aussehen könnte. Sie müsste mit einer anderen Vergütung medizinischer Dienstleistungen beginnen und Geld dürfte nicht mehr über Leben und Tod bestimmen. Mit der Expertise eines Mediziners geschrieben, verliert das Buch trotzdem nie den Patienten aus dem Blick. Durch seine präzise Analyse der herrschenden Verhältnisse wird es zu einer Überlebensstrategie für Kranke, die ihr Leid nicht durch Medizin vergrößern wollen.

Safety and Security Issues in Technical Infrastructures Rehak, David 2020-04-17 In the modern age of urbanization, the mass population is becoming progressively reliant on technical infrastructures. These industrial buildings provide integral services to the general public including the delivery of energy, information and communication technologies, and maintenance of transport networks. The safety and security of these structures is crucial as new threats are continually emerging. *Safety and Security Issues in Technical Infrastructures* is a pivotal reference source that provides vital research on the modernization of occupational security and safety practices within information technology-driven buildings. While highlighting topics such as explosion process safety, nanotechnology, and infrastructural risk analysis, this publication explores current risks and uncertainties and the raising of comprehensive awareness for experts in this field. This book is ideally designed for security managers, safety personnel, civil engineers, architects, researchers, construction professionals, strategists, educators, material scientists, property owners, and students.

Universale Logik in heterogenen Kulturräumen Linda Kerner 2019-02-21 Linda Kerner untersucht den Zusammenhang zwischen Logik und Kultur bei Individuen in internationalen Organisationen. Internationale Organisationen agieren in Länder(märkte)n, die durch soziokulturelle Unterschiede bei den Einstellungen zu Machtverteilung, Gemeinwohl, Risiko und Zeit gekennzeichnet sind. Aber wie sieht es mit der Logik aus? Ist etwas, das von Individuen eines Kulturraums als logisch erachtet wird auch zwingend logisch für Individuen eines anderen Kulturraums? Nein. Denn weder die Logik, als Bedingungen folgerichtigen Denkens, noch ihr Gebrauch sind – wie bislang unangefochten behauptet – als universal anzusehen.

The Fourth Industrial Revolution Klaus Schwab 2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

The Conservation of Medieval Polychrome Wood Sculpture Michele D. Marincola 2020-08-18 The first English-language book to comprehensively discuss the history and methodology of conserving medieval polychrome wood sculpture. Medieval polychrome wood sculptures are highly complex objects, bearers of histories that begin with their original carving and adornment and continue through long centuries of repainting, deterioration, restoration, and conservation. Abundantly illustrated, this book is the first in English to offer a comprehensive overview of the conservation of medieval painted wood sculpture for conservators, curators, and others charged with their care. Beginning with an illuminating discussion of the history, techniques, and meanings of these works, it continues with their examination and documentation, including chapters on the identification of both the wooden support and the polychromy itself—the paint layers, metal leaf, and other materials used for these sculptures. The volume also covers the many aspects of treatment: the process of determining the best approach; consolidation and adhesion of paint, ground, and support; overpaint removal and surface cleaning; and compensation. Four case studies on artworks in the collection of The Cloisters in New York, a comprehensive bibliography, and a checklist to aid in documentation complement the text.

Flying beyond the stall Douglas A. Joyce 2014 The X-31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed, manufactured, and flight tested as an international collaboration. It was also the only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. *Flying Beyond the Stall* begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic parameter estimation, and a "tailless" study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information.

Racializing Humankind: Interdisciplinary Perspectives on Practices of 'Race' and Racism Julian T. D. Gärtner 2022-02-14 Debates on historical and contemporary racism have recently become the subject of increasing public interest. The Black Lives Matter movement as well as the Covid-19 pandemic have underlined the importance and urgent necessity of examining racism in society from a multidisciplinary angle. The many facets of racism in the past and present also challenge the way we deal with history ("historical culture") in a globalized world. Rather than focusing on the history of ideas and its discursive development, this volume will focus on the practices of actors. It examines how and which practices,

especially practices of comparing, are constitutive in the construction of 'race' and manifestations of racism. This edited volume brings together interdisciplinary contributions from history, sociology, political science, American studies, literary studies, and media studies. An important focus lies on the social asymmetries created by racialization, including inequalities and violence. The chapters foreground historical and contemporary practices of racism and discuss their appearance in different epochs and locations.

The Command of the Air Giulio Douhet 2009-08-26 The Italian General Giulio Douhet reigns as one of the twentieth century's foremost strategic air power theorists. As such scholars as Raymond Flugel have pointed out, Douhet's theories were crucial at a pivotal pre-World War II Army Air Force institution, the Air Corps Tactical School.
