The Innovation Imperative in Health Care Organisations  
Peter Spurgeon 2012-01-01  
Healthy organisations are twice as likely to get better results than unhealthy ones, and this could be a matter of life and death if your business is healthcare. Whatever way you look at it, HR has a key role to play and the authors once again points the way. ð Clare Chapman, Group People Director, BT (British Telecoms)  
If healthcare systems around the world are to respond to the growing demands of an ageing population and advances in technology, then healthcare workforces will need to managed with imagination, agility and innovation. This important book sets out some of these challenges in a thoughtful and accessible way, allowing the reader to tap into the research pedigree of its authors and to draw out lessons and evidence which will inform both strategy and practice. ð Stephen Bevan, Director, Centre for Workforce Effectiveness, The Work Foundation  
This insightful book discusses vital concepts of system sustainability in terms of productivity, quality improvement, innovation and cost control in the context of maximising the potential of staff in the health care sector through effective human resource management. Health systems in the western world face increasingly intense pressure to contain or reduce costs, while countries such as China and India move towards universal coverage. The contributors illustrate that radical gains in efficiency and innovative practice are required internationally in

health care systems. They argue that the high proportion of health care system costs invested in staffing place the human resource function at the forefront of meeting this challenge. Sustained system change and productivity gains, more effective management of staff and work climate are essential elements of reform and are all covered in this book. The book provides practical examples as to how health service managers can rise to the challenge of sustaining services against greater pressures than ever before. It will strongly appeal to academics and students of health service management and public sector management. Health service managers, HR professionals in health as well as clinical staff will also find plenty of informative information in this enriching compendium.

But leadership is rather complex, and as such, it tends to lead to an increased interest within and across different disciplines. This book is an attempt to provide theoretical and empirical framework to better understand leadership challenges in various contexts. The authors cover an array of themes that span from an individual level to an organizational and societal level. In this volume, two sections are presented. The first section based on individual level focuses on different leadership styles and abilities, and the other section provides theories to understand leadership in public administration, in industrial settings and in nonprofit organizations. Critical-Care Nurses' Perceived Leadership Practices, Organizational Commitment, and Job Satisfaction Ngozi I. Moneke 2016-12-28 My writing of this book has evolved over the past thirty-six years of professional nursing practice. These were my first efforts as an author, which were published in 2013: Promoting a Culture of Safety: Preventing Central Line Infections in Weill Cornell Medical Center, which used a performance improvement process to lower the rate at which critically ill patients in cardiac care developed central line infections, and Factors Influencing Critical Nurses' Perception of their Overall Job Satisfaction: An Empirical Study, which used a correctional approach and was statistically analyzed to determine the perception of critical-care nurses of their manager's leadership style and its effect on their job satisfaction. Having been on the receiving end of

Leadership behaviors gave me a firsthand opportunity to observe these diverse nurse leaders at both extremes of the spectrum from laissez-faire leadership style to dictatorial leadership style and everything in between. Each encounter has enriched my life immeasurably. My personal and professional experiences, as well as the knowledge I gained from completing my dissertation, all compelled me to write this book to share with novice managers and those aspiring for a leadership role an awareness and provide them with some valuable information needed as they forge their career paths into a leadership role, knowing that one of the keys to effective leadership is the ability to stay intellectually curious and committed to learning with the understanding that new knowledge can come from variety of sources and to make it a point of duty to be always on a lookout for new knowledge.

*The Future of Nursing* Institute of Medicine 2011-02-08  
The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in

delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
