save our environment. Illustrating the power of committed individuals and the necessity for collaborative government and private-sector climate action, the book focuses on three essential areas: The technological dimension: move to 100% clean renewable energy as fast as we possibly can through innovations like clean-steel, "green" cement, and carbon-reuse companies; The ecological dimension: enhance and protect natural ecosystems, forests, and agricultural lands to safely store greenhouse gases and restore soils, transforming how we grow, process, and consume food; The social dimension: update and create new laws, policies and economic measures to recenter human values and reduce environmental and social injustice. Based on more than 6 years of research, Berger traveled the nation and abroad to interview governors, mayors, ranchers, scientists,

engineers, business leaders, energy experts, and financiers as well as carbon farmers, solar and wind innovators, forest protectors, non-profit leaders, and activists. With real world examples, an explanation of cutting-edge technologies in solar and wind, and political organizing tactics, Solving the Climate Crisis provides a practical road map for how we effectively combat climate change. Replacing the fossil-fuel system with a newly invigorated, modernized, clean-energy economy will produce tens of millions of new jobs and save trillions of dollars. Protecting the climate is thus potentially the greatest economic opportunity of our time.

Future Powertrain Technologies Stephan Rinderknecht 2020-12-17 Among the various factors greatly influencing the development process of future powertrain technologies, the trends in climate change and digitalization are of huge public interest. To handle these trends, new disruptive technologies are integrated into the development process. They open up space for diverse research which is distributed over the entire vehicle design process. This book contains recent research articles which incorporate results for selecting and designing

The field of investigation spans from the identification of ecologically optimal transformation of the existent vehicle fleet to the development of machine learning-based operating strategies and the comparison of complex hybrid electric vehicle topologies to reduce CO2 emissions.

Antistatic Sprays

National Aeronautics and Space Adm Nasa

2018-10-25 Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass

spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process.

Carlos Villa Mark Dean Johnson 2022-01-25
"Carlos Villa has been described as the preeminent Filipino American artist--a legend in artistic circles for his groundbreaking approaches and his influence on countless artists--but he remains little known to many fans and scholars of modern and contemporary art. Carlos Villa: Worlds in Collision is the first museum retrospective of his work, presented at the San Francisco Art Institute and the Asian Art Museum of San Francisco. Villa was trained at the San Francisco Art Institute in the 1950s as an abstract expressionist, and over time he transformed his practice to address issues of ethnic and cultural diversity. He concurrently assumed a leadership role in 'Third World' and 'multicultural' international art movements, and his large-scale works reference non-Western traditions, including tattoo, scarification, ritual, and ceremony. He was also an important theorist, curator, and organizer of public forums that he called 'actions.' This book traces the arc of his career from 1969 until his death in 2013, with emphasis on his feathered works from the 1970s, as well as later works that address aspects of the history of Filipinos in the United States. It illuminates the social and cultural roots--and global importance--of Villa's art and teaching career as he sought to forge a new kind of art-world inclusion that reflected his own experience, commitment to diversity, and

Success requires a continuous influx of new ideas, new challenges, and critical thought, and the interpersonal climate must not suppress, silence, ridicule or intimidate. Not every idea is good, and yes there are stupid questions, and yes dissent can slow things down, but talking through these things is an essential part of the creative process. People must be allowed to voice half-finished thoughts, ask questions from left field, and brainstorm out loud; it creates a culture in which a minor flub or momentary lapse is no big deal, and where actual mistakes are owned and corrected, and where the next left-field idea could be the next big thing. This book explores this culture of psychological safety, and provides a blueprint for bringing it to life. The road is sometimes bumpy, but succinct and informative scenario-based explanations provide a clear path forward to constant learning and
