investment proposals, build a factory, develop a supplier base to meet localization regulations, create a sales and service network, and develop and launch a peoples car that would sell 100,000 a year, in a sector where Indian expertise was limited. And to do this as a public sector company, having to follow all governmental systems and procedures, and having to please both its masters in the government and Suzuki Motor Corporation. However, the Maruti project succeeded, and in ways that were unimaginable in 1983. The car revolutionized the industry and put a country on wheels. Suddenly, ordinary middle-class men and women could aspire to own a reliable, economical and modern car, and the steep sales targets were easily met. Twenty-six years later, the company, now free of government controls,

*Automotive FDI in Emerging Europe* A. J. Jacobs 2017-06-19

This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period.

Drawing on case studies of 25 current and former foreign-run assembly plants, ~~the author~~

presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

### **Dependent Growth: Foreign Investment and the Development of the Automotive Industry in East-Central Europe**

Petr Pavlínek  
2017-04-07 This book offers a critical analysis of recent developments in the automotive industry of East-Central Europe (ECE). Economists, industry specialists and national governments have considered the rapid development of the automotive industry in ECE in the past twenty years an unqualified success. This rapid growth has been based on large inflows of foreign direct investment (FDI) from Western Europe, North America, Japan and South Korea, and it significantly contributed to GDP growth, created thousands of new jobs, and completely transformed the previously existing automotive industry in the region. This volume offers an analysis that goes beyond uncritical celebratory accounts of this rapid growth. It is based on original, detailed firm-level research conducted by the author in Czechia and Slovakia between 2009 and 2015 that covered assembly firms and the networks of component suppliers. Theoretically and conceptually, the analysis will draw on the global production networks and global value chains perspectives. Drawing on the original empirical data and on additional available information, this volume concentrates on several important questions related to the development of the automotive industry in ECE in the 2000s:

*The Next Everest* Jim Davidson 2021-04-20 A dramatic account of the deadly avalanche on Everest—and a return to reach the summit. On April 25, 2015, Jim Davidson was climbing Mount Everest when a 7.8-magnitude earthquake released avalanches all around him and his team, destroying their only escape route and trapping them at nearly 20,000 feet. It was the largest earthquake in Nepal in eighty-one years and killed nearly 8,900 people. That

day also became the deadliest in the history of Everest, with eighteen people losing their lives on the mountain. After spending two unsettling days stranded on Everest, Davidson's team was rescued by helicopter. The experience left him shaken, and despite his thirty-three years of climbing and serving as an expedition leader, he wasn't sure that he would ever go back. But in the face of risk and uncertainty, he returned in 2017 and finally achieved his dream of reaching the summit. Suspenseful and engrossing, *The Next Everest* portrays the experience of living through the biggest disaster to ever hit the mountain. Davidson's background in geology and environmental science makes him uniquely qualified to explain why the seismic threats lurking beneath Nepal are even greater today. But this story is not about "conquering" the world's highest peak. Instead, it reveals how embracing change, challenge, and uncertainty prepares anyone to face their next "Everest in life."

largest German motor-vehicle manufacturer when the company was formed in the town of Chemnitz in 1932. The rings symbolised the indissoluble character of the entity created by the merger of four motor-vehicle brands from the German state of Saxony: Audi, DKW, Horch and Wanderer. This emblem summarised the tradition of car and motorcycle construction in that region, already many decades old, and was also evidence of the companies' determination to continue shaping the future of the motor vehicle. Today, Audi AG makes the same statement with its four-ring emblem: awareness of tradition, orientation toward the future. 'Four Rings:The Audi Story' presents the history of Audi comprehensively and in a stimulating, highly informative manner, and includes company and product history data. The reader will be taken on a journey through a century of modern history and will experience the profound economic changes that occurred during this period.

PROBABILITY, AND STATISTICS FOR THE LIFE SCIENCES shows students how calculus relates to biology, with a style that maintains rigor without being overly formal. The text motivates and illustrates the topics of calculus with examples drawn from many areas of biology, including genetics, biomechanics, medicine, pharmacology, physiology, ecology, epidemiology, and evolution, to name a few. Particular attention has been paid to ensuring that all applications of the mathematics are genuine, and references to the primary biological literature for many of these has been provided so that students and instructors can explore the applications in greater depth. Although the focus is on the interface between mathematics and the life sciences, the logical structure of the book is motivated by the mathematical material. Improving the effectiveness of catalysts is the best way to ensure cleaner, more efficient industrial processes for a wide range of applications. *Catalyst Preparation: Science and Engineering* explores the optimization of catalytic materials through traditional and novel methods of catalyst preparation, characterization, and monitoring on laboratory and industrial scales. The book presents many key principles of heterogeneous catalyst preparation and the methods used to synthesize a catalyst with a particular composition and morphology. The first chapters examine the synthesis of bulk materials including amorphous and mesoporous

An ideal companion for scientists exploring the preparation of application-specific catalysts based on desired catalytic properties, *Catalyst Preparation: Science and Engineering* provides a balanced overview of important synthesis parameters to consider for good catalyst design.

readers quickly understand the  
relevant knowledge in the field.  
Emphasis has been placed on  
the independently developed  
hot stamping process and  
equipment, which help  
describe the theoretical and  
experimental research on key  
problems involving stress field,  
thermal field and phase  
transformation field in hot  
stamping process. Also, a

elevated temperature and the numerical simulation algorithms for high strength steel hot stamping is given in combination with the experiments. Finally, the book presents some application cases of hot stamping technology such as the lightweight car body design using hot stamping components and gradient hardness components, and the cooling design of the stamping

tool. This book is intended for researchers, engineers and graduate students in vehicle engineering, mechanical engineering, especially in the field of advanced manufacturing technology. The book also provides a useful reference for other new technology related temperature and phase transformation, such as aluminum-magnesium alloy hot stamping.
