*National Geographic Readers: Wildfires* Kathy Furgang 2015-07-14 Learn all about wildfires—how they happen, why they're important, and when they're dangerous—in this fascinating level 3 reader. It's sure to ignite your interest, with color photographs, interesting facts, and more.

*Garfield at Large* Jim Davis 1980 Like every great lasagna, Garfield was born in the kitchen of an Italian restaurant on a winter's night in 1978, while snow fell outside like grated parmesan cheese. He weighed five pounds, six ounces at birth--that's big for a kitten!--and right from the start showed a passion for Italian food. The restaurant owner, forced to choose between Garfield and closing his doors for lack of pasta, sold Garfield to a pet store. Garfield thought he was a goner until Jon Arbuckle walked in the door. The rest is history.

**FORTRAN 90 for Scientists and Engineers** Brian Hahn 1994-04-07 The introduction of the Fortran 90 standard is the first significant change in the Fortran language in over 20 years. This book is designed for anyone wanting to learn Fortran for the first time or for a programmer who needs to upgrade from Fortran 77 to Fortran 90. Employing a practical, problem-based approach this book provides a comprehensive introduction to the language. More experienced programmers will find it a useful update to the new standard and will benefit from the emphasis on science and engineering applications.

**Centennial Conversations** Daniel Shannon 2015-03-01 This collection of essays from leading thinkers in the field of continuing education guides readers through the recent transformation from traditional to dynamic new forms of practice. This volume has been edited into topical conversations; it demonstrates how universities are reinventing themselves in order to meet the needs of the 21st century as well as the nontraditional students they serve. Centennial Conversations is a valuable resource for campus leaders, higher education researchers, and policy makers.

*Springer Handbook of Science and Technology Indicators* Wolfgang Glänzel 2019-10-30 This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system. Focusing on various aspects of the development and application of indicators derived from data on scholarly publications, patents and electronic communications, the individual chapters, written by leading experts, discuss theoretical and methodological issues, illustrate applications, highlight their policy context and relevance, and point to future research directions. A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources, presenting both traditional and advanced approaches. It addresses the main bibliographic metrics and indexes, such as the journal impact factor and the h-index, as well as altmetric and webometric indicators and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance as well as their impact on research policy and society. It also presents and critically discusses various national research evaluation systems. Complementing the sections reflecting on the science system, the

technology section includes multiple chapters that explain different aspects of patent statistics, patent classification and database search methods to retrieve patent-related information. In addition, it examines the relevance of trademarks and standards as additional technological indicators. The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners, scientists and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance.

**Ecosystem-Based Fisheries Management** Jason Link 2010-10-07 Responsible fisheries management is of increasing interest to the scientific community, resource managers, policy makers, stakeholders and the general public. Focusing solely on managing one species of fish stock at a time has become less of a viable option in addressing the problem. Incorporating more holistic considerations into fisheries management by addressing the trade-offs among the range of issues involved, such as ecological principles, legal mandates and the interests of stakeholders, will hopefully challenge and shift the perception that doing ecosystem-based fisheries management is unfeasible. Demonstrating that EBFM is in fact feasible will have widespread impact, both in US and international waters. Using case studies, underlying philosophies and analytical approaches, this book brings together a range of interdisciplinary topics surrounding EBFM and considers these simultaneously, with an aim to provide tools for successful implementation and to further the debate on EBFM, ultimately hoping to foster enhanced living marine resource management.

**Eat Like a Human** Dr. Bill Schindler 2021-11-16 An archaeologist and chef explains how to follow our ancestors' lead when it comes to dietary choices and cooking techniques for optimum health and vitality. "Read this book!" (Mark Hyman, MD, author of Food) Our relationship with food is filled with confusion and insecurity. Vegan or carnivore? Vegetarian or gluten-free? Keto or Mediterranean? Fasting or Paleo? Every day we hear about a new ingredient that is good or bad, a new diet that promises everything. But the secret to becoming healthier, losing weight, living an energetic life, and healing the planet has nothing to do with counting calories or feeling deprived—the key is re-learning how to eat like a human. This means finding food that is as nutrient-dense as possible, and preparing that food using methods that release those nutrients and make them bioavailable to our bodies, which is exactly what allowed our ancestors to not only live but thrive. In Eat Like a Human, archaeologist and chef Dr. Bill Schindler draws on cutting-edge science and a lifetime of research to explain how nutrient density and bioavailability are the cornerstones of a healthy diet. He shows readers how to live like modern “hunter-gatherers” by using the same strategies our ancestors used—as well as techniques still practiced by many cultures around the world—to make food as safe, nutritious, bioavailable, and delicious as possible. With each chapter dedicated to a specific food group, in-depth explanations of different foods and cooking techniques, and concrete takeaways, as well as 75+ recipes, Eat Like a Human will permanently change the

way you think about food, and help you live a happier, healthier, and more connected life.

*Principles of Accounting Volume 1 - Financial Accounting* Mitchell Franklin 2019-04-11 The text and images in this book are in grayscale. A hardback color version is available. Search for ISBN 9781680922929. Principles of Accounting is designed to meet the scope and sequence requirements of a two-semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar ways to build a strong foundation that can be applied across business fields. Each chapter opens with a relatable real-life scenario for today's college student.

Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization.

**Personalized Learning** Peggy Grant 2014-06-21 Personalized Learning: A Guide for Engaging Students with Technology is designed to help educators make sense of the shifting landscape in modern education. While changes may pose significant challenges, they also offer countless opportunities to engage students in meaningful ways to improve their learning outcomes. Personalized learning is the key to engaging students, as teachers are leading the way toward making learning as relevant, rigorous, and meaningful inside school as outside and what kids do outside school: connecting and sharing online, and engaging in virtual communities of their own. Renowned author of the Heck: Where the Bad Kids Go series, Dale Basye, and award winning educator Peggy Grant, provide a go-to tool available to every teacher today—technology as a way to 'personalize' the education experience for every student, enabling students to learn at their various paces and in the way most appropriate to their learning styles.

The Third Bank of the River Chris Feliciano Arnold 2018-06-05 During the 2014 World Cup, an isolated Amazonian tribe emerged from the jungle on the misty border of Peru and Brazil, escaping massacre at the hands of illegal loggers. A year later, in the jungle capital of Manaus, a bloody weekend of reprisal killings

inflames a drug war that blurs the line between cops and kingpins. Both events reveal the dual struggles of those living in and around the vast, endangered Amazon jungle. As indigenous tribes lose their ancestral territory every day to loggers and drug runners, local communities in cities such as Manaus, are plagued by intense violence due to the ongoing drug wars and entrenched corruption within the police and government. The chaos and violence echo the atrocities that have haunted the rain forest since Europeans first arrived in the New World. Following doctors and soldiers, environmental activists and indigenous Olympic archers, among others, The Third Bank of the River traces development in the Amazon from the arrival of the first Spanish flotilla. Veteran journalist Chris Arnold grounds his story in rigorous first-hand reporting and in-depth research, revealing a portrait of Brazil and the Amazon that is complex, bloody, and often tragic.

*Conspicuous Compassion* Patrick West 2004 "We live in an age of conspicuous compassion. We sport empathy ribbons, send flowers to recently deceased celebrities, weep in public over murdered children, apologize for historical misdemeanors, wear red noses for the starving, go on demonstrations to proclaim 'Drop the Debt' or 'Not in My Name.' We feel each other's pain. We desperately seek a common identity and new social bonds to replace those that have withered in the post-war era - the family, the church, the nation and neighborhood. Mourning sickness is a religion for the lonely crowd that no longer subscribes to orthodox churches. Its flowers and teddies are its rites, its collective minutes' silences its liturgy and mass. This book's thesis is that such displays of empathy do not change the world for the better: they do not help the poor, diseased, dispossessed or bereaved. Our culture of ostentatious caring is about projecting your ego, and informing others what a deeply caring individual you are. It is about feeling good, not doing good, and illustrates not how altruistic we have become, but how selfish. And, as Patrick West shows in this witty but incisive monograph, sometimes it can be cruel."

**The Colby Sisters of Pittsburgh, Pennsylvania** Adam Bock 2014-07-10 Nobody knows us. They think they do. But they don't. In a world of champagne and canapés, the five Colby sisters are the glamorous faces of New York high society. With wealth, style and desirable husbands, they appear to have it all. But privately, the sisters' squabbles distort the picture of this perfect family. Image is everything and struggling to maintain it could have life-changing consequences. This black comedy by OBIE award-winning Canadian playwright Adam Bock received its world premiere at the Tricycle Theatre, London, on 19 June 2014.

Scientific Writing Jennifer Peat 2013-07-01 This comprehensive and practical book covers the basics of grammar as well as the broad brush issues such as writing a grant application and selling to your potential audience. The clear explanations are expanded and lightened with helpful examples and telling quotes from the giants of good writing. These experienced writers and teachers make scientific writing enjoyable.

Human Communication Sherwyn P. Morreale 2001 This book offers a unique and unified approach to competence and the basic processes of human communication backed by skill assessment. Beginning with the premise that all forms of communication have

the potential to be viewed as competent depending on the context or situation, the text helps readers develop a framework for choosing among communication messages that will allow them to act competently. The theoretically-based and skills-oriented framework emphasizes the basic themes of motivation, knowledge and skills across interpersonal communication, electronically mediated communication, small group communication, and public speaking.

Theatrical Worlds (Beta Version) Charles Mitchell 2014 "From the University of Florida College of Fine Arts, Charlie Mitchell and distinguished colleagues from across America present an introductory text for theatre and theoretical production. This book seeks to give insight into the people and processes that create theater. It does not strip away the feeling of magic but to add wonder for the artistry that make a production work well." -- Open Textbook Library.

*Just My Type* Simon Garfield 2011-09-01 A hugely entertaining and revealing guide to the history of type that asks, What does your favorite font say about you? Fonts surround us every day, on street signs and buildings, on movie posters and books, and on just about every product we buy. But where do fonts come from, and why do we need so many? Who is responsible for the staid practicality of Times New Roman, the cool anonymity of Arial, or the irritating levity of Comic Sans (and the movement to ban it)? Typefaces are now 560 years old, but we barely knew their names until about twenty years ago when the pull-down font menus on our first computers made us all the gods of type. Beginning in the early days of Gutenberg and ending with the most adventurous digital fonts, Simon Garfield explores the rich history and subtle powers of type. He goes on to investigate a range of modern mysteries, including how Helvetica took over the world, what inspires the seeming ubiquitous use of Trajan on bad movie posters, and exactly why the all-type cover of Men are from Mars, Women are from Venus was so effective. It also examines why the "T" in the Beatles logo is longer than the other letters and how Gotham helped Barack Obama into the White House. A must-have book for the design conscious, *Just My Type's* cheeky irreverence will also charm everyone who loved *Eats, Shoots & Leaves* and *Schott's Original Miscellany*.

**A Century of Artists Books** Riva Castleman 1997-09 Published to accompany the 1994 exhibition at The Museum of Modern Art, New York, this book constitutes the most extensive survey of modern illustrated books to be offered in many years. Work by artists from Pierre Bonnard to Barbara Kruger and writers from Guillaume Apollinaire to Susan Sontag. An important reference for collectors and connoisseurs. Includes notable works by Marc Chagall, Henri Matisse, and Pablo Picasso.

**Heart and Brain** The Awkward Yeti 2015-10-20 Boasting more than two million pageviews per month, TheAwkwardYeti.com has become a webcomic staple since its creation in 2012. In addition to tons of fan favorites, Heart and Brain contains more than 75 brand new comics that have never been seen online. From paying taxes and getting up for work to dancing with kittens and starting a band, readers everywhere will relate to the ongoing struggle between Heart and Brain.

Closing the School Discipline Gap Daniel J. Losen 2015 Educators remove over 3.45 million students from school annually for disciplinary reasons, despite strong evidence that school suspension policies are harmful to students. The research presented in this volume demonstrates that disciplinary policies and practices that schools control directly exacerbate today's profound inequities in educational opportunity and outcomes. Part I explores how suspensions flow along the lines of race, gender, and disability status. Part II examines potential

remedies that show great promise, including a district-wide approach in Cleveland, Ohio, aimed at social and emotional learning strategies. Closing the School Discipline Gap is a call for action that focuses on an area in which public schools can and should make powerful improvements, in a relatively short period of time. Contributors include Robert Balfanz, Jamilia Blake, Dewey Cornell, Jeremy D. Finn, Thalia González, Anne Gregory, Daniel J. Losen, David M. Osher, Russell J. Skiba, Ivory A. Toldson "Closing the School Discipline Gap can make an enormous difference in reducing disciplinary exclusions across the country. This book not only exposes unsound practices and their disparate impact on the historically disadvantaged, but provides educators, policymakers, and community advocates with an array of remedies that are proven effective or hold great promise. Educators, communities, and students alike can benefit from the promising interventions and well-grounded recommendations." –Linda Darling-Hammond, Charles E. Ducommun Professor of Education, Stanford University "For over four decades school discipline policies and practices in too many places have pushed children out of school, especially children of color. Closing the School Discipline Gap shows that adults have the power—and responsibility—to change school climates to better meet the needs of children. This volume is a call to action for policymakers, educators, parents, and students." –Marian Wright Edelman, president, Children's Defense Fund

On the Map Simon Garfield 2013 Maps fascinate us. They chart our understanding of the world and they log our progress, but above all they tell our stories. From the early sketches of philosophers and explorers through to Google Maps and beyond, Simon Garfield examines how maps both relate and realign our history. With a historical sweep ranging from Ptolemy to Twitter, Garfield explores the legendary, impassable (and non-existent) mountains of Kong, the role of cartography in combatting cholera, the 17th-century Dutch craze for Atlases, the Norse discovery of America, how a Venetian monk mapped the world from his cell and the Muppets' knack of instant map-travel. Along the way are pocket maps of dragons, Mars, murders and more, with plenty of illustrations and prints to signpost the route. From the bestselling and widely-adored author of *Just My Type*, *On The Map* is a witty and irrepressible examination of where we've been, how we got there and where we're going.

**Groundhog Day** Ryan Gilbey 2019-07-25 It is becoming clearer and clearer that *Groundhog Day* (1993), directed by Harold Ramis, is one of the masterpieces of 1990s Hollywood cinema. One of the first films to use a science-fiction premise as the basis for romantic comedy, it tells the story of a splenetic TV weatherman, Phil Connors (Bill Murray at his disreputable best), who finds himself repeating indefinitely one drab day in the milk-and-cookies town of Punxsutawney, Pennsylvania. At first glance it seems like a feel-good parable in the tradition of Frank Capra's *It's a Wonderful Life* (1943). But on closer inspection it is a deeply ambivalent fable, with strong echoes of Samuel Beckett: before he finds redemption Phil must plumb the depths of suicidal despair - and even after he has survived this, the film offers no guarantees that he will live happily ever after. Ryan Gilbey begins his account of *Groundhog Day* with the long and unlucky gestation of the script by Danny Rubin (who was interviewed specially for this book) which formed the basis of the finished film. Gilbey celebrates the inspired casting of Murray, alongside Andie MacDowell and less well-known actors such as Stephen Tobolowsky (who plays the reptilian sa

*The Long Tail* Chris Anderson 2006-07-11 What happens when the bottlenecks that

stand between supply and demand in our culture go away and everything becomes available to everyone? "The Long Tail" is a powerful new force in our economy: the rise of the niche. As the cost of reaching consumers drops dramatically, our markets are shifting from a one-size-fits-all model of mass appeal to one of unlimited variety for unique tastes. From supermarket shelves to advertising agencies, the ability to offer vast choice is changing everything, and causing us to rethink where our markets lie and how to get to them. Unlimited selection is revealing truths about what consumers want and how they want to get it, from DVDs at Netflix to songs on iTunes to advertising on Google. However, this is not just a virtue of online marketplaces; it is an example of an entirely new economic model for business, one that is just beginning to show its power. After a century of obsessing over the few products at the head of the demand curve, the new economics of distribution allow us to turn our focus to the many more products in the tail, which collectively can create a new market as big as the one we already know. The Long Tail is really about the economics of abundance. New efficiencies in distribution, manufacturing, and marketing are essentially resetting the definition of what's commercially viable across the board. If the 20th century was about hits, the 21st will be equally about niches.

**The Thousand-mile War** Brian Garfield 2004 The 1942 Japanese invasion of two of the Aleutian Islands, the thousand-mile archipelago west of Alaska, represents the only time in modern history that American territory has been occupied by a foreign power. The ensuing fifteen-month campaign, memorialised in John Huston's extraordinary documentary film, was 'the weirdest war ever waged': a terrible, elemental and always three-sided battle, between the Americans, the Japanese and the weather. Frozen puddles of oil could be lifted like boards. Servicemen turned summer clothing for fuel. Aircrews flew amidst icy rain, driven side-down by gales. The eventual liberation of the island of Attu was second only to Iwo Jima in the percentage of American casualties. Brian Garfield's book, never before published in the UK, is the definitive history of this 'Forgotten War'.

**Timekeepers** Simon Garfield 2016-09-15 Not so long ago we timed our lives by the movement of the sun. These days our time arrives atomically and insistently, and our lives are propelled by the notion that we will never have enough of the one thing we crave the most. How have we come to be dominated by something so

arbitrary? The compelling stories in this book explore our obsessions with time. An Englishman arrives back from Calcutta but refuses to adjust his watch. Beethoven has his symphonic wishes ignored. A moment of war is frozen forever. The timetable arrives by steam train. A woman designs a ten-hour clock and reinvents the calendar. Roger Bannister becomes stuck in the same four minutes forever. A British watchmaker competes with mighty Switzerland. And a prince attempts to stop time in its tracks. **Timekeepers** is a vivid exploration of the ways we have perceived, contained and saved time over the last 250 years, narrated in the highly inventive and entertaining style that bestselling author Simon Garfield is fast making his own. As managing time becomes the greatest challenge we face in our lives, this multi-layered history helps us tackle it in a sparkling new light.

**Principles of Management** Openstax 2022-03-25 Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters.
