Environmental Movements and Politics of the Asian Anthropocene Paul Jobin 2021-05-24 "This collection provides a powerful and sophisticated analysis of how environmental movements influence politics in Asia, and how politics influences movements." -- John S. Dryzek, Centenary Professor, University of Canberra "This important book reflects the challenges and questions currently foremost in scholars', activists' and policy-makers' minds-the Anthropocene, environmental justice, China's Belt and Road Initiative, and post-politics-all addressed through the lens of environmental movements in Asia. -- Jonathan Rigg, Professor at the School of Geographical Sciences, University of Bristol "How have authoritarianism, democratization and political change affected environmentalism in East and Southeast Asia? How have environmental mobilization and demands for environmental justice at the grassroots influenced politics there? These are among the vital questions answered by this insightful and well-crafted volume." --Paul G. Harris, Chair Professor of Global and Environmental Studies, Education University of Hong Kong "This book shows convincingly that the concept of Anthropocene is as relevant in Asia as anywhere." -- Philip Hirsch, Emeritus Professor of Human Geography, University of Sydney "Despite its claims to universality, the Anthropocene concept remains largely a Western phenomenon. This book is crucial in correcting this view by putting environmental movements in Asia center stage." -- Eva Horn, Professor of Literature and Cultural History, University of Vienna

Fluid Mechanics, Heat Transfer, and Mass Transfer K. S. Raju 2011-04-20 This broad-based book covers the three major areas of Chemical Engineering. Most of the books in the market involve one of the individual areas, namely, Fluid Mechanics, Heat Transfer or Mass Transfer, rather than all the three. This book presents this material in a single source. This avoids the user having to refer to a number of books to obtain information. Most published books covering all the three areas in a single source emphasize theory rather than practical issues. This book is written with emphasis on practice with brief theoretical concepts in the form of questions and answers, not adopting stereo-typed question-answer approach practiced in certain books in the market, bridging the two areas of theory and practice with respect to the core areas of chemical engineering. Most parts of the book are easily understandable by those who are not experts in the field. Fluid Mechanics chapters include basics on non-Newtonian systems which, for instance find importance in polymer and food processing, flow through piping, flow measurement, pumps, mixing technology and fluidization and two phase flow. For example it covers types of pumps and valves, membranes and areas of their use, different equipment commonly used in chemical industry and their merits and drawbacks. Heat Transfer chapters cover the basics involved in conduction, convection and radiation, with emphasis on insulation, heat exchangers, evaporators, condensers, reboilers and fired heaters. Design methods, performance, operational issues and maintenance problems are highlighted. Topics such as heat pipes, heat pumps, heat tracing, steam traps, refrigeration, cooling of electronic devices, NOx control find place in the book. Mass transfer chapters cover basics such as diffusion, theories, analogies, mass transfer coefficients and mass transfer with chemical reaction, equipment such as tray and packed columns, column internals including structural packings, design, operational and installation issues, drums and separators are discussed in good detail. Absorption, distillation, extraction and leaching with applications and design methods, including emerging practices involving Divided Wall and Petluk column arrangements, multicomponent separations, supercritical solvent extraction find place in the book.
