**Dark Side of the Light** Louis Sala-Molins 2006 Enlightenment thinkers such as Rousseau and Montesquieu are best known for their humanist theories and liberating influence on Western civilization. But as renowned French intellectual Louis Sala-Molins shows, Enlightenment discourses and scholars were also complicit in the Atlantic slave trade, becoming instruments of oppression and inequality. Translated into English for the first time, *Dark Side of the Light* scrutinizes Condorcet's Reflections on Negro Slavery and the works of Montesquieu, Rousseau, and Diderot side by side with the Code Noir (the royal document that codified the rules of French Caribbean slavery) in order to uncover attempts to uphold the humanist project of the Enlightenment while simultaneously justifying slavery. Wielding the pen of both the ironist and the moralist, Sala-Molins demonstrates the flawed nature of these attempts and the reasons given for this denial of rights, from the imperatives of public order to the incomplete humanity of the slave (and thus the need for his progressive humanization through slavery), to the economic prosperity that depended on his labor. At the same time, Sala-Molins uses the techniques of literature to give equal weight to the perspective of the "barefooted, the starving, and the slaves" through expository prose and scenes between slave and philosopher, giving moral agency and flesh-and-blood dimensions to issues most often treated as abstractions. Both an urgent critique and a measured analysis, *Dark Side of the Light* reveals the moral paradoxes of Enlightenment philosophies and their world-changing consequences. Louis Sala-Molins is a moral and political philosopher and emeritus professor at the University of Toulouse. He is the author of many books, including *Le Code Noir*, *ou Le calvaire de Canaan* and *L'Afrique aux Amériques*. John Conteh-Morgan is associate professor of French and Francophone, African-American, and African studies at Ohio State University. He is the author of *Theatre and Drama in Francophone Africa: A Critical Introduction*.

**Renewable Energy** Organisation for Economic Co-operation and Development 2004 Renewable Energy - Market and Policy Trends in IEA Countries reviews the experience of IEA countries after the oil crisis in the 1970s initiated a surge of investments in renewables research and development. While use of renewables has grown rapidly, they still account for only a small portion of the IEA energy mix. Hydropower, bioenergy and geothermal energy are mature technologies that contribute about 5 - 6% to primary energy supply. Solar, wind, and other new renewables have experienced rapid technology development, but as yet they represent only a small share. This work examines policies and measures that have been introduced in IEA countries to increase the cost effective deployment of renewables, reviews the objectives behind these policies, and evaluates the results. The aim is to identify best practices in order to assist governments in making future policy decisions.

**Egypt on the Pentateuch's Ideological Map** Franz V. Greifenhagen 2003-04-01 This book explores the references to Egypt in the Pentateuch--twice as dense as in the rest of the Hebrew Bible--in the context of the production of the text's final form during the Persian period. Here, as Greifenhagen shows, Egypt functions ideologically as the primary "other" over against which Israel's identity is constructed, while its role in Israel's formation appears as subsidiary and as a superseded stage in a master narrative which locates Israel's ethnic roots in Mesopotamia. But the presentation of this powerful neighbour is equivocal: a dominant anti-Egyptian stance coexists with alternative, though subordinate, pro-Egyptian views, suggesting that the Pentateuchal narrative was produced within a context of ideological conflict over attitudes towards a land that provided a home for Jewish fugitives and emigrants.

**Holley Carburetors** Mike Mavrigian 2016-01-15 During the muscle car wars of the 1960s, Holley carburetors emerged as the carbs to have because of their easy-to-tune design, abundance of parts, and wide range of sizes. The legendary Double Pumper, the universal 600-cfm 1850 models, the Dominator, and now the Avenger have stood the test of time and are the leading carburetors in the high-performance engine market. Veteran engine building expert and automotive author Mike Mavrigian guides you through each important stage of the rebuilding process, so you have the best operating carburetor for a particular engine and application. In addition, he explains carb identification as well as idle, mid-range and high-speed circuit operation, specialty tools, and available parts. You often need to replace gaskets, worn parts, and jets for the prevailing weather/altitude conditions or a different engine setup. Mavrigian details how to select parts then disassemble, assemble, and calibrate all of the major Holley carburetors. In an easy-to-follow step-by-step format, he shows you each critical stage for cleaning sensitive components and installing parts, including idle screws, idle air jets, primary/secondary main jets, accelerator pumps, emulsion tubes, and float bowls. He also includes the techniques for getting all of the details right so you have a smooth-running engine. Holley carburetor owners need a rebuilding guide for understanding, disassembling, selecting parts, and reassembling their carbs, so the carb then delivers exceptional acceleration, quick response, and superior fuel economy. With Holley Carburetors: How to Rebuild you can get the carb set up and performing at its best. And, if desired, you can move to advanced levels of tuning and modifying these carbs. If you're looking for the one complete book that helps you quickly and expertly rebuild your Holley and get back on the road, this book is a vital addition to your performance library.

**Modern Engine Blueprinting Techniques** Mike Mavrigian 2013 Engine production for the typical car manufactured today is a study in mass production. Benefits in the manufacturing process for the manufacturer often run counter to the interests of the end user. What speeds up production and saves manufacturing costs results in an engine that is made to fall within a wide set of standards and specifications, often not optimized to meet the original design. In short, cheap and fast engine production results in a sloppy final product. Of course, this is not what enthusiasts want out of their engines. To maximize the performance of any engine, it must be balanced and blueprinted to the exact tolerances that the factory should have adhered to in the first place. Four cylinder, V-8, American or import, the performance of all engines is greatly improved by balancing and blueprinting. Dedicated enthusiasts and professional racers balance and blueprint their engines because the engines will produce more horsepower and torque, more efficiently use fuel, run cooler and last longer. In this book, expert engine builder and veteran author Mike Mavrigian explains and illustrates the most discriminating engine building techniques and perform detailed procedures, so the engine is perfectly balanced, matched, and optimized. Balancing and blueprinting is a time consuming and exacting process, but the investment in time pays off with superior performance. Through the process, you carefully measure, adjust, machine and fit each part together with precision tolerances, optimizing the design and maximizing performance. The book covers the block, crankshaft, connecting rods, pistons, cylinder heads, intake manifolds, camshaft, measuring tools and final assembly techniques. For more than 50 years, balancing and blueprinting has been an accepted and common practice for maximi
