This book traces the history and development of a mutual organization in the financial sector called SWIFT, the Society for Worldwide Interbank Financial Telecommunication. Over the last forty years, SWIFT has served the financial services sector as proprietary communications platform, provider of products and services, standards developer, and conference organizer ("Sibos"). Founded to create efficiencies by replacing telegram and telex (or 'wires') for international payments, SWIFT now forms a core part of the financial services infrastructure. It is widely regarded as the most secure trusted third party network in the world serving 212 countries and over 10,000 banking organizations, securities institutions and corporate customers. Through every phase of its development, SWIFT has maintained the status of industry cooperative thus presenting an opportunity to study broader themes of globalization and governance in the financial services sector. The combination of workflow audit trails with data warehouse technology and operational business data allows for complex analyses that can support managers in their assessment of an organization's performance. The increasing maturity of business process management and data warehouse systems enables the design and development of advanced process-oriented management information systems. Michael zur Muehlen discusses the integration of workflow audit trail data with existing data warehouse structures and develops a reference architecture for process-oriented management information systems. Bank Principles for Effective Insolvency and Creditor Rights Systems. The study offers an overview of out-of-court restructuring, which is not seen as fundamentally opposed to formal insolvency procedures. Actually, the study contemplates different restructuring techniques as forming a continuum to the treatment of financial difficulties. Thus, from the purely contractual or informal arrangements for debt rescheduling between the debtor and its creditors, to the fully formal reorganization or liquidation procedures, there are numerous intermediate solutions. In the study, these solutions are identified by the terms of enhanced procedures where the contractual arrangements are supported by norms or principles for workouts; and hybrid procedures where the contractual arrangements are supported by the intervention of the courts or an administrative authority. The study discusses the advantages

debt restructuring techniques, and concludes, in this regard, that a legal system may contain a number of options a menu that can cover different sets of circumstances. In the end, the law may offer a toolbox with very different instruments that the parties may use depending on the specific facts of the case. A substantial part of the study is devoted to the analysis of the enabling regulatory environment for out-of-court restructuring. It is evident that debt restructuring does not operate in a vacuum: in fact, the general legal system influences and to a certain extent determines the possibilities for debt restructuring in any given jurisdiction. The study provides a checklist that can be used to examine the features of a legal system that bear a direct influence on debt restructuring activities. The different characteristics of informal restructurings, and of enhanced and hybrid debt restructurings are covered by the study. The different approaches to debt restructuring aim at containing

Over twenty case studies describe the real story of choosing and implementing various KM tools and techniques, and experts analyse the trends in the evolution of these technologies and tools, along with opportunities and challenges facing companies harnessing them. Lessons from successes and failures are drawn, along with roadmaps for companies beginning or expanding their KM practice. The introductory chapter presents a taxonomy of KM tools, identifies IT implications of KM practices, highlights lessons learned, and provides tips and recommendations for companies using these tools. Relevant literature on KM practices and key findings of market research groups and industry consortia such as IDC, Gartner and APQC, are presented. The majority of the book is devoted to case studies, featuring clients and vendors along the entire spectrum of solutions: hardware (e.g. handheld/wearable devices),

Each chapter is structured along the "8Cs" framework developed by the author: connectivity, content, community, commerce, community, capacity, culture, cooperation and capital. Vendor history, product/service offerings, implementation details, client testimonials, ROI reports, and future trends are highlighted.
