It presents the major ideas and principles that relate to the teaching and learning of vocabulary and evaluates a wide range of practical activities designed to help boost students' vocabulary acquisition. Key questions which are answered include:

- How many words

- should students learn at a time, and how often?
- How much classroom time should be spent teaching vocabulary?
- What is the best way to group vocabulary for learning?
- Is it useful to provide students with the L1 translations of unknown words?
- Why do some students make greater progress than others?

stuart webb is Professor in Applied Linguistics at the University of Western Ontario, Canada. paul nation is Emeritus Professor in Applied Linguistics at Victoria University of Wellington, New Zealand. Teachers will find answers to many of their perennial questions about vocabulary learning—as well as some they had not yet thought to ask!

you avoid common learner errors. English Collocations in Use presents and practises hundreds of collocations in typical contexts. It is ideal for students at good intermediate level and above.

New Headway iTools makes it easy to use

interactive whiteboards and digital technology with

Headway. Everything about these resources is

user-friendly and supportive - and here's

why. First, you don't need any special

equipment. Just use what you already have in the

school - an interactive whiteboard, a computer, a

data projector, an ebeam. New Headway iTools

works on all of these, and it doesn't matter which

brand of whiteboard you have. Second, you get a

full-colour Teacher's Guide in the pack. This

shows you when and how to use the activities in

the lesson, and includes whiteboard tips so you're never without support. The Guide also appears on the disc, for easy access during the lesson. New Headway iTools saves you time, too. How? Pre-selection ... the activities on the disc are pre-selected from the Student's Book. This means you don't need to go through the book deciding which activities are most suitable for the interactive whiteboard - they've already been researched and chosen for that very reason. Just go ahead and use them in class, with confidence.

Discrete Choice Methods with Simulation Kenneth Train 2009-07-06 This book describes the new generation of discrete choice methods, focusing on the many advances that are made possible by simulation. Researchers use these statistical methods to examine the choices that consumers, households, firms, and other agents make. Each of the major models is covered: logit, generalized extreme value, or GEV (including nested and cross-nested logits), probit, and mixed logit, plus

a variety of specifications that build on these basics. Simulation-assisted estimation procedures are investigated and compared, including maximum simulated likelihood, method of simulated moments, and method of simulated scores. Procedures for drawing from densities are described, including variance reduction techniques such as antithetics and Halton draws. Recent advances in Bayesian procedures are explored, including the use of the Metropolis-Hastings algorithm and its variant Gibbs sampling. The second edition adds chapters on endogeneity and expectation-maximization (EM) algorithms. No other book incorporates all these fields, which have arisen in the past 25 years. The procedures are applicable in many fields, including energy, transportation, environmental studies, health, labor, and marketing.
