Technologies for Sustainable Development Jean-

Claude Bolay 2013-08-04 Whilst scientific

research can be crucial in guiding innovation and development throughout the world, it can be too detached from real world applications, particularly in developing and emerging countries.

Technologies for Sustainable Development brings together the best 20 papers from the 2012 Conference of the EPFL-UNESCO Chair in Technologies for Development with the aim to explore and discuss ways to link scientific research with development practices to assist

practitioners and reply directly to social needs. In order for technologies to be adopted it is not sufficient that they are low cost and affordable but also socially, culturally and environmentally accepted by the intended users. Technologies for Sustainable Development aims to explore and answer the following three questions: • What is an appropriate technology? • How can we ensure a sustainable, integrated development? • What are the conditions for co-creation and transfer of such technologies? Focusing on the importance of improving working relationships between stakeholders; researchers and decision-makers;

between scientists and industrial sectors; between academics and the population; Technologies for Sustainable Development opens a dialogue necessary to create and implement the best solutions adapted to social demands.

Edible Identities: Food as Cultural Heritage Ronda L. Brulotte 2016-04-29 Food - its cultivation, preparation and communal consumption - has

long been considered a form of cultural heritage. A dynamic, living product, food creates social bonds as it simultaneously marks off and maintains cultural difference. In bringing together anthropologists, historians and other scholars of food and heritage, this volume closely examines the ways in which the cultivation, preparation, and consumption of food is used to create identity claims of 'cultural heritage' on local, regional, national and international scales. Contributors explore a range of themes, including how food is used to mark insiders and outsiders within an ethnic group; how the same food's meanings

change within a particular society based on class, gender or taste; and how traditions are 'invented' for the revitalization of a community during periods of cultural pressure. Featuring case studies from Europe, Asia and the Americas, this timely volume also addresses the complex processes of classifying, designating, and valorizing food as 'terroir,' 'slow food,' or as intangible cultural heritage through UNESCO. By effectively analyzing food and foodways through the perspectives of critical heritage studies, this collection productively brings two overlapping but frequently separate theoretical frameworks into

conversation.

The Early Neolithic in Greece Catherine Perlès

2001-10-04 Farmers made a sudden and dramatic appearance in Greece around 7000 BC, bringing with them new ceramics and crafts, and establishing settled villages. They were Europe's first farmers, and their settlements provide the link between the first agricultural communities in the

Near East and the subsequent spread of the new technologies to the Balkans and on to Western Europe. In this 2001 book, Catherine Perlès argues that the stimulus for the spread of agriculture to Europe was a colonisation movement involving small groups of maritime peoples. Drawing evidence from a wide range of archaeological sources, including often neglected 'small finds', and introducing daring new perspectives on funerary rituals and the distribution of figurines, she constructs a complex and subtle picture of early Neolithic societies, overturning the traditional view that these

societies were simple and self-sufficient.

The American Revolution and the Habsburg Monarchy Jonathan Singerton 2022 "This book presents the American Revolution from the perspective of the Habsburg monarchy. It reveals how, despite seeming antithetical to the American cause, the Habsburg dynasty and people in the Habsburg lands realized the opportunity unleashed by the creation of the thirteen United States of America, demonstrating the wider

effects of the American Revolution beyond the standard Atlantic World and portraying the Habsburg Monarchy in a new, oceanic light"--

The Consolations of Philosophy Alain De Botton
2013-01-23 From the author of *How Proust Can Change Your Life*, a delightful, truly consoling work that proves that philosophy can be a supreme source of help for our most painful everyday problems. Perhaps only Alain de Botton could uncover practical wisdom in the writings of some of the greatest thinkers of all time. But uncover he does, and the result is an unexpected book of both solace and humor. Dividing his work into six sections -- each highlighting a different psychic ailment and the appropriate philosopher --

de Botton offers consolation for unpopularity from Socrates, for not having enough money from Epicurus, for frustration from Seneca, for inadequacy from Montaigne, and for a broken heart from Schopenhauer (the darkest of thinkers and yet, paradoxically, the most cheering).

Consolation for envy -- and, of course, the final word on consolation -- comes from Nietzsche:

"Not everything which makes us feel better is good for us." This wonderfully engaging book will, however, make us feel better in a good way, with equal measures of wit and wisdom.

Building in France, Building in Iron, Building in

Ferroconcrete Sigfried Giedion 1995-09-01 With Building in France, Building in Iron, Building in Ferroconcrete (1928)—published now for the first time in English—Siegfried Giedion positioned himself as an eloquent advocate of modern architecture. This was the first book to exalt Le Corbusier as the artistic champion of the new movement. It also spelled out many of the tenets of Modernism that are now regarded as myths, among them the impoverishment of nineteenth-century architectural thinking and practice, the contrasting vigor of engineering innovations, and the notion of Modernism as technologically

preordained.

Evolving IP Marketplace Suzanne Michael

2011-05-01 This report recommends improvements to two areas of patent law policies

affecting how well a patent gives notice to the public of what technology is protected and remedies for patent infringement. The report provides valuable insights on how courts can reform the patent system to best serve consumers. It recognizes that patents play a critical role in encouraging innovation, but it also observes that some strategies by patent holders risk distorting competition and deterring innovation. This is especially true for activity driven by poor patent notice, and by remedies that do not align the compensation received by patent holders for infringement with the economic

value of their patented inventions. This is a print on demand report.

Modernity's Ear Roshanak Kheshti 2015-10-23

Inside the global music industry and the racialized and gendered assumptions we make about what we hear Fearing the rapid disappearance of indigenous cultures, twentieth-century American ethnographers turned to the phonograph to salvage native languages and musical practices. Prominent among these early “songcatchers” were white women of comfortable class standing, similar to the female consumers targeted by the music industry as the gramophone became increasingly present in bourgeois homes. Through these simultaneous movements, listening became

constructed as a feminized practice, one that craved exotic sounds and mythologized the ‘other’ that made them. In *Modernity’s Ear*, Roshanak Kheshti examines the ways in which racialized and gendered sounds became fetishized and, in turn, capitalized on by an emergent American world music industry through the promotion of an economy of desire. Taking a mixed-methods approach that draws on anthropology and sound studies, Kheshti locates sound as both representative and constitutive of culture and power. Through analyses of film, photography, recordings, and radio, as well as

ethnographic fieldwork at a San Francisco-based world music company, Kheshti politicizes the feminine in the contemporary world music industry. Deploying critical theory to read the fantasy of the feminized listener and feminized organ of the ear, *Modernity's Ear* ultimately explores the importance of pleasure in constituting the listening self.

The Complete Indian Housekeeper and Cook Flora Annie Steel 2011-10-13 'an Indian household can no more be governed peacefully, without dignity and prestige, than an Indian Empire' In *The Complete Indian Housekeeper and Cook* (1888)

Flora Annie Steel and her co-author Grace Gardiner provide practical, and often highly opinionated, advice to young memsahibs in India. They explain how to 'make a hold' over servants, how to establish and stock a storeroom, how to plan a menu, manage young children, treat bites from 'mad, or even doubtful dogs', and teach an Indian cook how to make fish quenelles. *The Complete Indian Housekeeper and Cook* promised its reader a comprehensive guide to domesticity in India, even if she found herself living in camps or in the jungle, on the hills or in the plains, whether she was the wife of an

influential Indian Civil Servant or a missionary. This new edition, complete with its stimulating introduction and substantial notes, makes available a classic domestic work that in detailing the memsahib's role in the household sheds light on the entire imperial experience. ABOUT THE SERIES: For over 100 years Oxford World's Classics has made available the widest range of literature from around the globe. Each affordable volume reflects Oxford's commitment to scholarship, providing the most accurate text plus a wealth of other valuable features, including expert introductions by leading authorities, helpful

notes to clarify the text, up-to-date bibliographies for further study, and much more.

Cataloging Cultural Objects Project Manager Standards and Research Databases Murtha Baca, PhD 2006-06-12 In a visual and artifact-filled world, cataloging one-of-a-kind cultural objects without published guidelines and standards has been a challenge. Now for the first time, under the leadership of the Visual Resources Association, a cross-section of five visual and cultural heritage experts, along with scores of reviewers from varied institutions, have

created a new data content standard focused on cultural materials. This cutting-edge reference offers practical resources for cataloging and flexibility to meet the needs of a wide range of institutions—from libraries to museums to archives. Consistently following these guidelines for selecting, ordering, and formatting data used to populate metadata elements in cultural materials' catalog records: Promotes good descriptive cataloging and reduces redundancy Builds a foundation of shared documentation Creates data sharing opportunities Enhances end-user access across institutional boundaries

Complements existing standards (AACR) This is a must-have reference for museum professionals, visual resources curators, archivists, librarians and anyone who documents cultural objects (including architecture, paintings, sculpture, prints, manuscripts, photographs, visual media, performance art, archaeological sites, and artifacts) and their images.

Adhesives and Adhesive Tapes Gerhard Gierenz

2008-09-26 Adhesion is among the oldest technologies known to mankind, but the technology of adhesives began to boom with the developments in chemistry in the early 1900s.

The last few years have seen tremendous progress in the performance of adhesives, allowing two pieces to be connected inseparably.

Modern adhesives perform so well that more sophisticated joining methods, e.g. welding, can often be replaced by adhesion, meaning that

adhesives have found new areas of application.

This book allows readers to quickly gain an overview of the adhesives available and to select the best adhesive for each purpose.

Industrially Important Fungi for Sustainable Development Ahmed M. Abdel-Azeem 2021-06-18

Fungi are an understudied, biotechnologically valuable group of organisms. Due to their immense range of habitats, and the consequent need to compete against a diverse array of other fungi, bacteria, and animals, fungi have developed numerous survival mechanisms.

However, besides their major basic positive role in the cycling of minerals, organic matter and mobilizing insoluble nutrients, fungi have other

beneficial impacts: they are considered good sources of food and active agents for a number of industrial processes involving fermentation mechanisms as in the bread, wine and beer industry. A number of fungi also produce biologically important metabolites such as enzymes, vitamins, antibiotics and several products of important pharmaceutical use; still others are involved in the production of single cell proteins. The economic value of these marked positive activities has been estimated as approximating to trillions of US dollars. The unique attributes of fungi thus herald great

promise for their application in biotechnology and industry. Since ancient Egyptians mentioned in their medical prescriptions how they can use green molds in curing wounds as the obvious historical uses of penicillin, fungi can be grown with relative ease, making production at scale viable. The search for fungal biodiversity, and the construction of a living fungi collection, both have incredible economic potential in locating organisms with novel industrial uses that will lead to novel products. Fungi have provided the world with penicillin, lovastatin, and other globally significant medicines, and they remain an

untapped resource with enormous industrial potential. Volume 1 of Industrially Important Fungi for Sustainable Development provides an overview to understanding fungal diversity from diverse habitats and their industrial application for future sustainability. It encompasses current advanced knowledge of fungal communities and their potential biotechnological applications in industry and allied sectors. The book will be useful to scientists, researchers, and students of microbiology, biotechnology, agriculture, molecular biology, and environmental biology.

Phonetic Interpretation John Local 2004-02-12

First published in 2003, *Phonetic Interpretation* presents innovative work from four core areas: phonological representations and the lexicon, phonetic interpretation and phrasal structure, phonetic interpretation and syllable structure, and phonology and natural speech production. Written by major figures in the fields of phonetics, phonology and speech perception, the chapters in this volume use a wide range of laboratory and instrumental techniques to analyse the production and perception of speech, their aim being to explore the relationship between the sounds of speech and the linguistic organisation that lies

behind that. The chapters present evidence of the lively intellectual engagement of laboratory phonology practitioners with the complexities and richness of human language. The book continues the tradition of the series, *Papers in Laboratory Phonology*, by bringing linguistic theory to bear on an essential problem of linguistics: the relationship between mental models and the physical nature of speech.

global warming, outlining a detailed survival strategy for the civilization of the future.

The Ecology of Building Materials Bjorn Berge

2009-06-04 The Ecology of Building Materials

explores key questions surrounding sustainability of building materials. It provides technical data to enable design and building professionals to choose the most appropriate materials for a project: those that are least polluting, most energy efficient, and from sustainable sources. The book also gives information and guidance on a wide range of issues such as recycling, detailing for increased durability and Life Cycle Analysis.

Berge's book, translated from the Norwegian by Chris Butters and Filip Henley, offers safe and environmentally friendly material options. It

provides an essential and easy-to-use reference guide to this complex subject for the building industry professional. New to this edition: •

• Thorough exploration of building materials in relation to climate change issues • Extensive updating of basic data, as well as the introduction of a wide range of new materials • Methods for recycling and reuse of materials • More information on the interaction between materials and the indoor environment, ventilation and

energy use • Full colour text and user-friendly larger format Bjørn Berge is a practicing architect, researcher and lecturer. Since the 1970s, he has written several books on building ecology for the

Scandinavian public. He is one of the founders of Gaia Architects who have developed a wide range of pioneering techniques in sustainable building.
