Airline Safety John J. Miletich 1990-11-26 Increased demand for efficient travel has resulted in more airplanes, more flights and, concurrently, increased public apprehension concerning airline travel safety. This volume primarily addresses air piracy, deregulation, and metal fatigue, the three major targets of airline safety efforts on major airlines worldwide from 1960 to the present. After a lengthy listing of acronyms common to the industry, the text focuses on entries from periodicals, books, government publications, dissertations, and conference reports, selected for their relevance and categorized under topics which cover airports and airport personnel, weather, aircraft, collision avoidance, emergencies, and security. Each selection is a thoroughly documented and succinct summary, resulting in a manual which can provide airline, legal, medical, and security personnel, as well as the travelling public, with both an overview of available information on airline safety and a reference guide to further investigation of this important topic. Author and subject indexes complete the work.

Stress and the Police Officer Katherine W. Ellison 2004 "Good policing is not impossible. The reactions that have been associated with stressors are not inevitable. Many officers retire in good physical and emotional health and 100 back on their careers with pleasure. In a situation where stressers have led to maladaptive behavior on the part of individuals or organizations, change is called for. Change must be constant, as social conditions in the world around us vary. The police represent a force for the order necessary for society to function. It is not an easy job, but it is one that is worth doing well."

Police, Firefighter, and Paramedic Stress 1990-01-16 Public safety professionals work together in life-and-death situations. During natural or transportation disasters, industrial accidents, shootings, suicides or dozens of other instances, police officers, firefighters, and paramedics are called upon to assist both injured and uninjured people. Although often romanticized in television series and in films, the real-life tasks of public safety professionals are usually unpleasant--restraining violent individuals and removing accident, homicide, and suicide victims from death scenes--and always highly stressful. They are frequently subjected to additional stress when their efforts are criticized by family members of the injured or deceased. Although stress can be harmful, even fatal, police officers, firefighters, and paramedics can have more productive and satisfying lives when they learn to positively control stress, rather than be controlled by it. This English language bibliography consisting of more than 700 references, covering the time period 1945 to early 1989, can help these and other professionals manage stress more effectively. Source publications, all of which are annotated, include books, articles, conference proceedings, theses, government publications, and dissertations. The bibliography section is composed of six chapters addressing psychological and physiological factors, the family, substance abuse, accidents, and suicide, with references arranged alphabetically by author surname. A list of acronyms and author and subject indexes complete the work. Of paramount importance to police officers, firefighters, and paramedics as well as their families, this bibliography will provide legislators, physicians, nurses, social workers, psychiatrists, psychologists, and sociologists with extensive and substantial documentation on the stress-filled work lives of these public safety professionals.

Implementation of a First Responder Operational Stress Injury Clinic Using the TDF-II and CFIR Frameworks Valerie Testa 2021 Background: First responders (firefighters, paramedics, and police officers) are often exposed to potentially psychologically traumatic events. When combined with insufficient social support and reduced help-seeking behaviours, such exposures may increase the risk of mental health challenges, particularly among paramedics who report the highest rates of mental disorders. Objective: The current study used the Theoretical Domains Framework (TDF) and the Consolidated Framework for Implementation Research (CFIR) to identify critical barriers and facilitators to help-seeking and accessing mental health care, and the feasibility and sustainability of a first responder clinic. Methods: Semi-structured qualitative interviews included 11 paramedics (frontline, mid-and-senior management, and union), recruited using purposive and snowball sampling. Interviews were analyzed using content and thematic analyses. The TDF and CFIR guided study design, interview content, data collection, and analysis. Results: Barriers included the complexities of stigma, confidentiality, cultural competency, and trust. Conclusions: The findings will be instrumental in developing evidence-based approaches to mental health care for paramedics.

Under Fire Thomas Wills 2020-06-13 My career in the fire service spanned 40 years. This book is my story of the harsh realities I and other first responders dealt with daily. When I entered the fire service, I was twenty years old. When I left, I was sixty. My career included tours of duty with four different fire departments. Some were small and some were large. Some were busy and some were slow. As for the victims I was called upon to help, they were all the same. Scared, confused, and in severe pain. I started as a Firefighter and climbed my way through the ranks to Fire Chief. During my journey I served twenty years as a Paramedic as well. My customers were the public. And the public calls 911 when their problems escalate beyond their ability to manage them. It was a career that demanded never-ending training, testing and the stress that goes with it. Combine this with the fact Firefighters, Paramedics, and Police Officers are exposed to and witness some of the most graphic and horrific scenes imaginable. The toxic mixture of career stress and mutilated bodies sometimes unknowingly leave deep scars. The kind of scars that over the years go undetected until something triggers the buried emotion. Most people are rarely allowed to look behind the curtain. The stories in this book are all true, they capture just some of those horrific events and the people who put their lives in my hands. When our customers call 911, it's their worst day. For us? It's every day.

Handbook of Posttraumatic Stress Rosemary Ricciardelli 2021-09-30 The Handbook of Posttraumatic Stress provides a comprehensive review of posttraumatic stress in its multiple dimensions, analyzing causation and epidemiology through prevention and treatment. Together, the contributions provide an in-depth examination of the current understood causes, impacts, and treatments of and for posttraumatic stress, mobilizing academic, administrative, and clinical knowledge, and lived experience to inform ongoing and future work in the field. Drawing from range of different topics, fields of study, and research methods, this text will appeal to readers across medical, mental health, and academic disciplines.

Handbook of Stress in the Occupations Janice Langan-Fox 2011-01-01 The Handbook of Stress in the Occupations sets a new agenda for stress research and gives fresh impetus to scholars who wish to focus on issues and problems associated with specific jobs, some of which have received little attention in the past. Written by researchers who are true experts in the field of each occupation, this comprehensive Handbook reviews stress in a wide range of jobs including transport, education, farming, fishing, oil rig drilling, finance, law enforcement, fire fighting, entrepreneurship, music, social

services, prisons, sport, and health including surgery, internship, dentistry, nursing, paramedics, psychiatry and social work. Several occupations such as oil rig drilling are reviewed; these jobs have always been stressful but have received little attention by researchers, and only now receive more focus due to the Bay of Mexico accident. Other occupations demand more of our attention because there have been substantial technological changes in particular jobs, such as in dentistry, nursing, and surgery. This lucid and insightful compendium will be a source of inspiration for those in the helping professions and all those individuals working in the industries described in the book. More specifically, the Handbook will strongly appeal to human resource specialists, psychologists, occupational health and safety professionals, managers, nurses and therapists. Written in highly accessible language, it will also provide rich reading to lay audiences including job incumbents themselves, as well as specialists in industry and academia. Academics and postgraduate students of business, management, and psychology will find plenty of detailed information regarding stress associated with occupations. *Police, Firefighter, and Paramedic Stress* John J. The IQ Debate Stephen H. Aby 1990-11-30 Over the past twenty years, one of the most bitter debates within the social sciences has centered on Arthur Jensen's contention that American blacks are, on average, less intelligent than whites and that this alleged difference is genetic in origin. Aby's selective, annotated bibliography offers scholars a concise guide to the storm of argument and counterargument over Jensen's suggestion and to the scientific, legal, educational, philosophic, and social issues it has raised. Aby has catalogued and described more than 400 books, book chapters, professional journal articles, newspaper and magazine articles, source documents, media materials, and reference sources relating to the controversy. He begins with an overview of the IQ debate, its history, and the principal participants. He then arranges bibliographic entries in chapters according to the type of source; each entry includes descriptive annotations of up to 300 words. A glossary explains technical terms that are used in the annotations and in the debate itself. This bibliography will be an important addition to collections in education, sociology, and psychology, as well as a resource for courses on educational testing and measurement, racism, sociology of education, and black education.
