**Deep Learning** Ian Goodfellow 2016-11-10 An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives.

“Written by three experts in the field, Deep Learning is the only comprehensive book on the subject.” —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator

to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.

**A Long Walk to Water** Linda Sue Park 2010 When the Sudanese civil war reaches his village in 1985, 11-year-old Salva becomes separated from his family and must walk with other Dinka tribe members through southern Sudan, Ethiopia and Kenya in search of safe haven. Based on the life of Salva Dut, who, after emigrating to America in 1996, began a project to dig water wells in Sudan. By a Newbery Medal-winning author.

**Programming Erlang** Joe Armstrong 2013-09-23 A multi-user game, web site, cloud application, or networked database can have thousands of users all interacting at the same time. You need a powerful, industrial-strength tool to handle the really hard problems inherent in parallel, concurrent environments. You need Erlang. In this second edition of the bestselling Programming Erlang, you'll learn how to write parallel programs that scale effortlessly on multicore systems. Using Erlang, you'll be surprised at how easy it becomes to deal with parallel problems, and how much faster and more efficiently your programs run. That's because Erlang uses sets of parallel processes—not a single sequential process, as found in most programming languages. Joe Armstrong, creator of Erlang, introduces this powerful language in small steps, giving you a complete overview of Erlang and how to use it in common scenarios. You'll start with sequential programming, move to parallel programming and handling errors in parallel programs, and learn to work confidently with distributed programming and the standard Erlang/Open Telecom Platform (OTP) frameworks. You need no previous knowledge of functional or parallel programming. The chapters are packed with hands-on, real-world tutorial examples and insider tips and advice, and finish with exercises for both beginning and advanced users. The second edition has been extensively rewritten. New to this edition are seven chapters covering the latest Erlang features: maps, the type system and the Dialyzer, WebSockets, programming idioms, and a new stand-alone execution environment. You'll write programs that dynamically detect and correct errors, and that can be upgraded without stopping the system. There's also coverage of rebar (the de facto Erlang build system), and information on how to share and use Erlang projects on github, illustrated with examples from cowboy and bitcask. Erlang will change your view of the world, and of how you program. What You Need The Erlang/OTP system. Download it from erlang.org.

**Trusting Ourselves** Karen Johnson 1991 Definitive and comprehensive, *Trusting Ourselves* is the only book to cover every aspect of psychology as it applies to women. This groundbreaking work will empower its readers to understand and make decisions about their psychological well-being and treatment in much the same way *Our Bodies, Ourselves* redefined women's health care. In a radical reversal of the usual approach to psychological care, which assumes that only the professional understands the problem. Johnson strongly believes that women and their values, perspectives, and biases have merit, and that most patients understand why they're not happy with their lives. Trusting this self-knowledge and taking action on one's own behalf provide a foundation for all the information in this book. It is time to revise psychotherapy to incorporate a woman's perspective.

**Tolstoi, the Teacher (Classic Reprint)** Charles-Baudouin Charles-Baudouin 2018-08-08 Excerpt from Tolstoi, the Teacher T is with a certain degree of suspicion and mistrust that men of science extend the hand of welcome to those who are outside their own circle. They are right in adopting this attitude. Their mistrust increases when directed against a man who has given proof of his powers in the realms of imagination, impulse and passion. This also is justified. All the same, the domains of the human mind are not separated from one another by water tight compartments; everything interpenetrates and overlaps. The trinity of eclectics sensibility, intelligence and will, has long ago become antiquated; no' longer is it necessary to prove the inadequacy of this method. Too frequently, however, do we still reason as though the mind were made up of separate partitions. Now this is a grave error. **Goodnight Moon** Margaret Wise Brown 2016-11-08 In this classic of children's literature, beloved by generations of readers and listeners, the quiet poetry of the words and the gentle, lulling illustrations combine to make a perfect book for the end of the day. In a great green room, tucked away in bed, is a little bunny. "Goodnight room, goodnight moon." And to all the familiar things in the softly lit room—to the picture of the three little bears sitting on chairs, to the clocks and his socks, to the mittens and the kittens, to everything one by one—the little bunny says goodnight. One of the most beloved books of all time, *Goodnight Moon* is a must for every bookshelf and a time-honored gift for baby showers and other special events.

**Alice in Wonderland** Lewis Carroll 2009-01-01 *Alice in Wonderland* (also known as *Alice's Adventures in Wonderland*), from 1865, is the peculiar and imaginative tale of a girl who falls down a rabbit-hole into a bizarre world of eccentric and unusual creatures. Lewis Carroll's prominent example of the genre of "literary nonsense" has endured in popularity with its clever way of playing with logic and a narrative structure that has influence generations of fiction writing.

**First Book in Astronomy** John Lauris Blake 2015-06-11 Excerpt from *First Book in Astronomy: Adapted to the Use of Common Schools* Two objects are to be continually kept in view by every person engaged in communicating literary and scientific knowledge. One of these objects is, to make a judicious selection of topics; and the other is, to present them in a form most likely to

interest the attention, and thereby produce distinct and deep impressions on the understanding and the memory. These objects are too much neglected both by teachers and the authors of elementary works on education. A teacher may possess an abundance of erudition in the branches to be taught; but completely fail in rendering his instructions of much value to his pupils hf an Inattention to the particulars named. And a book, on elementary education, may excel in the accuracy of its details, as well as in relation to the ability with which the general plan is executed; but still be most defective in answering the purpose for which it was designed. To answer the purpose contemplated in such a work, it must be suited to the taste and the mental capacity of the persons to be benefited by it. It sometimes happens, and not very infrequently, that an author will crowd into a book, whether needed or not, everything he knows on the subject of which It treats. Hence, we see in school books for the use of quite young scholars, matters altogether above their comprehension. The evil arising from such instances of ostentation is far more extensive than at first imagined. It is not simply a waste of space occupied by the irrelevant matters alluded to, but, if scholars find one half of a book above their comprehension, they will be likely to throw aside the whole of it in disgust. A teacher also may be influenced by a similar desire to excite admiration, and adopt retailer means for securing it. Accordingly, he will bring into school, for the use of mere boys and girls, books which are suited to the highest grade of students in college; but which his own scholars will understand about as well as they would the entire system of Egyptian hieroglyphics. Place before young scholars one book, and another, and another, which they cannot understand, and they will be likely to have an aversion to everything in the form of books. To produce the best possible effects from the use of books, they should contain nothing that children of ordinary capacity, with proper instruction, are unable to comprehend. They should also be filled with what is enticing in its appearance. The very form in which things

suitable for young persons are presented, should be pleasing to the eye. Hence, long paragraphs, long articles on the same subject, a long succession of pages filled precisely in the same manner, presenting an aspect as dull and monotonous, as a sand desert without variation or limits, are alike unfavorable in their effects on the interests of education.
