Gynecologic Endocrinology J.B. Josimovich 2013-11-11 It has been exactly five years since I was privileged to write the foreword for the previous edition of this distinguished book on gynecologic endocrinology. Reproductive endocrinology has been established as a separate respected area in the general field of endocrinology, as well as in obstetrics and gynecology. Years ago the reproductive endocrinologist took long periods of time to answer questions, since most of the studies done then used bioassay methods. These studies were hastened by the work of Berson and Yalow with their development of the radioimmunoassay. They were later awarded the Nobel Prize for this work, since it unlocked many avenues of investigation in the

field of endocrinology. It is now possible to measure small quantities of hormones in various biological tissues. Since that time high-pressure liquid chromatography and mass spectrometry have unlocked further secrets in this field with their capability of measuring ever smaller quantities of substances as well as their metabolites. Giant strides have been made in other diagnostic methods that interface with gynecologic endocrinology, notably in the field of radiology in the arena of tomography and CAT scans, and now nuclear magnetic resonance. Progress will be pushed still further, and this fourth edition again identifies the leading edge of knowledge. Such new areas embrace the physiology of relaxin, the ontogeny of sexual differentiation, diagnostic procedures on the cervix, functional dysmenorrhea and anorexia nervosa, idiopathic edema, and the misunderstood premenstrual tension syndrome.

Clinical Gynecologic Endocrinology and Infertility Leon Speroff 2004-12-01

Frontiers in Reproductive Endocrinology and Infertility C. Ng 2012-12-06 This book presenting the latest thinking on Reproductive Endocrinology and Infertility is truly international as the authors hail from no less than four different continents (North America, Europe, Australia and Asia). The idea for this book was

conceived during the XII World Congress On Fertility and Sterility where the unique confluence of our distinguished authors occurred in Singapore in October 1986. The authors were involved in the Pre And Post Congress Scientific Programmes which we organised. The overwhelming success of the Congress and the Pre And Post Congress Scientific Programmes prompted this book so that those unable to attend the meeting will still be able to benefit from the vast range of topics covered. This book will be a valuable addition to the knowledge in Reproductive Endocrinology and Infertility and will be useful reading for those wishing to pursue this subspecialty. The authors are indebted to Lee Foundation (Singapore) for help in the publication of this book. We would also like to thank Miss Jam Siew Fong and Miss Tang May Mey for their excellent secretarial assistance. Singapore, January 1988 Charles SANg F H Maurine Tsakok S LTan K H Chan ix 1

Essentials of Gynecologic and Obstetric Endocrinology H. Bacchus 2012-12-06 This book concisely presents the essential information in the field of gynecologic endocrinology. Textual material is extensively supplemented by schemes, tables, and diagrams to elucidate etiologies, pathophysiologic mechanisms, and natural histories of the various clinical disorders in the field. The most timely and up-to-date laboratory procedures and physiologic manipulations for diagnosis are presented. Management rationales based on the definitive diagnostic studies and on knowledge of the natural histories are also presented. Special emphasis is placed on the roles of suprahypothalamic as well as extragonadal and peripheral factors in the pathogenesis of many of the disorders of the menstrual cycle. These include the influence of diseases, altered physiologic states, and drugs-areas which are largely neglected in other presentations of this field. The material presented is based on courses in gynecologic endocrinology presented at the Lorna Linda University School of Medicine and at other institutions over the past several years. Extensive use is made of authoritative reviews in this

field, and only highly controversial material is authenticated by specific references. I am deeply grateful to Mrs. Lucille Innes of the Audiovisual Department at Lorna Linda University for the artwork. The loyal secretarial help of Alice Hickman, Carol Guzman, and Robbie Cleek is gratefully acknowledged. Habeeb Bacchus, Ph.D., M.D., F.A.C.P.

Reproductive Endocrinology, An Issue of Obstetrics and Gynecology Clinics, Michelle L. Matthews 2015-02-11 This issue will focus on the most common reproductive endocrine conditions encountered by healthcare providers. This series is timely and will be of interest to readers as there are many recent updates to the recommendations for appropriate evaluation and treatment of several reproductive conditions. Each chapter will address specific anatomic and hormonal conditions and will examine reproductive function from puberty to menopause. A thorough summary of abnormal uterine bleeding including recent 2012 updates for evaluation and management will be emphasized. Individual chapters on anatomic causes of bleeding, such as uterine fibroids and endometriosis, will be included with a focus on new treatment options. Polycystic ovarian syndrome (PCOS), a common hormonal cause of irregular bleeding and infertility, will also be reviewed.

Recent studies provide insight into new fertility treatments for patients with PCOS including the use of aromatase inhibitors for ovulation induction. Other fertility related chapters include the evaluation of the infertile woman, ovulation induction, recurrent pregnancy loss, and age-related infertility. Finally, a transition to premature ovarian insufficiency and menopause will be provided. The Women's Health Initiative publication in 2002 reported an association between hormone replacement therapy and breast cancer. There are several updates since this controversial publication and recent literature will be summarized. Attention will focus on appropriate evaluation and management of these common reproductive endocrine topics reviewing recent recommendations on best practices for clinicians.

Introduction to Clinical Reproductive Endocrinology Gillian C. L. Lachelin 2013-09-11 Introduction to Clinical Reproductive Endocrinology covers the pathophysiological basis and management of clinical conditions related to reproductive endocrinology. The book describes the normal development and physiology of the hypothalamic-pituitary-gonadal axes and the structure and function of the hypothalamic, pituitary and gonadal hormones. The text then discusses the events of ovulation and fertilization and the endometrial changes of the menstrual cycle. The etiology, diagnosis, and management of problems encountered in reproductive medicine, including those of delayed and precocious puberty, primary and secondary amenorrhoea, and oligomenorrhoea are also considered. The book further tackles the premenstrual syndrome; endometriosis; female and male subfertility; problems of early pregnancy; menorrhagia; and the menopause. The text concludes by looking into the indications for, and the side-effects of, drugs used in reproductive medicine. Reproductive endocrinologists, obstetricians, and gynecologists and medical students taking courses related to reproductive endocrinology will find the book useful.
