Six case studies explore the domestic drivers and barriers for policies with climate (co-)benefits in developing countries and show that international support can help to overcome these constraints by providing additional resources for incremental policy costs, technical assistance, and technology cooperation to build local capacity. Cooperation can also contribute to robust institutional frameworks and government policies that facilitate increased private sector investment, which supports low-carbon production and consumption. Any such cooperation has to be anchored in domestic initiatives - building on stakeholder support for policies with climate co-benefits. The studies also examines the important role played by policy indicators in successful policy implementation and how they can be linked to international incentive schemes. The contributions in this volume examine cases from institutional and national perspectives from across the globe and find that, with common but differentiated responsibility for climate policy, developed countries have to contribute more towards technological and financial support in developing countries.
