WebOur thesis in this paper is that the pursuit of a general theory of vector elds is rightful, and to support this thesis we propose a general theory of equilibrium behavior. The formalization of such a theory may sound at rst to be a formidable and copious task considering that the concept of vector

WebThis chapter contributes to the vast literature on FTAs and customs unions by considering FTAs’ network formation games and applications of graph theory in explaining the adjustment process towards global free trade. The farsightedness of countries affects dynamic global general equilibrium outcomes.
