Women Pilots of Alaska Sandi Sumner 2005-01-06 Since the time of its inception, the field of aviation has rapidly grown in both importance and popularity. The acceptance and recognition of women's participation and achievements in this activity, however, did not develop with nearly the same speed. The first biographical history of women pilots in Alaska, this work explores the challenges faced by women of Alaska as they pursued roles in aviation--something that had long been considered part of "the men's world". Beginning in 1927 with Marvel Crosson and reaching to the present day, 37 adventurous and personal tales are offered, including

that of an ultralight flyer, the first woman to become U.S. Aerobatic Champion, a parachute jumper, the first woman to fly in a small airplane over the North Pole and an Iditarod dog musher. Questions about why these women chose to fly; where they learned; when they soloed; what it meant to them to become a pilot; what challenges they faced in such a non-traditional role; and why they chose the skies of Alaska are addressed as these intriguing stories are told.

Dream So Big Christopher B. Pearman 2014-11-15 With my father, what you see is what you get. He doesn't pretend to be some kind of guru, and he doesn't believe he did everything right (which he didn't, despite how hard he tried). But he's definitely confident about what he knows, and eloquent in the way he puts it across. I urge you to put his lessons to the test with your kid, and see how far they'll take you both. I think, once you start reading, you're going to find my dad's confidence and enthusiasm contagious. When I look back now, I remember my father was always focused. Always firm. Always loving. Always thinking about the future. It was kind of like he was always searching for the right way, the most successful way to do things. Make no mistake about it, he was always making sure I watched my p's and q's. I mean always: morning, noon, and night. Without that love and discipline, I would never have gotten to where I am today. You certainly would not have ever heard of Raven-Symon?. Raven-Symon? January 2010 While so many talented and ambitious kids have become tabloid fodder, Raven-Symon?, beloved star of That's So Raven, has remained grounded and happy as she's created a massive franchise for Disney, won multiple Kids' Choice Awards, and made history as the first African-American woman with her own sitcom. The difference? Her parents' positive-approach plan--which you can now use with your own children. As her father and manager, Christopher B. Pearman worked tirelessly to nurture Raven's dream, while teaching her to believe in herself and, most importantly, never losing sight of their family's core values. Inside, Pearman breaks down his plan into eight "Dream Catchers"--spiritual and practical principles that filter out negativity, and allow only affirming thoughts into your child's consciousness. Make no mistake: This is not a guide to stage parenting, but a doctrine for raising your kids to reach their full potential in any endeavor, simple or grand. As a parent, you know there's nothing more important than making sure your children become all they want to be. Dream So Big shows how commitment, responsibility, and dedication to your children's innermost wishes can catapult them to great success--and happiness.

Aviation's Most Wanted Steven A. Ruffin 2005 Ever since the caveman gazed longingly at the winged creatures above him, mankind has been enamored with the idea of flight—of just taking off and soaring away. Steven A. Ruffin celebrates that spirit, that sense of wonder, with Aviation's Most Wanted™: The Top 10 Book of Winged Wonders, Lucky Landings, and Other Aerial Oddities. With dozens of top-ten lists focusing on notable flights, memorable planes, famous and infamous aviators, aircraft combat, air travel—even space travel—and so much more, Ruffin provides a treasure trove of fun facts and amazing anecdotes celebrating the world's love affair with flight, plus the hurt that accompanies any deep love. Will Rogers died in a plane crash near Point Barrow, Alaska, with aviation legend Wiley Post at the controls. Rogers was writing an article at the time of the crash; eerily, the last word he typed was "death." Isoroku Yamamoto, who masterminded the surprise attack on Pearl Harbor, met his fate in similarly sneaky fashion. U.S. forces intercepted and decoded information on Yamamoto's travel plans and "Pearl Harbored" his plane, shooting it down into the island jungle of Bougainville. The safest seat in a crash depends on if you crash on takeoff or on landing—so flip a coin! You'll read about the first and worst of flight, aces and races, and everything from crimes, sex, and controversy to planes so fast they can outrun the sun. With Aviation's Most Wanted™ you'll get the history of flight from the early balloon adventures of the eighteenth century until the present, laid out with trivia and tales to amuse and amaze!

An Ultralight Helicopter Experience Paul Brydel 2015-10-03 This book was compiled from the knowledge acquired during the engineering, design, part fabrication, and assembly of my full-function ultralight helicopter. Prior to tackling this task my only encounter with a helicopter was being airlifted out of the Atlantic Ocean during Air Force Survival Training. Every aspect of the project is included. The information is presented assuming the reader has limited helicopter background. It does however offer in depth calculations for those interested in the analytical and theoretical areas of this project. All calculations were done using Mathcad an engineering software program. Every stage involved in building the helicopter is covered in detail including - the initial investigation of helicopter history to establish starting parameters, a rigorous discussion on the theory, and a brief summary of how helicopters fly. From there it proceeds to the formal engineering process for the design and build of a functional helicopter. The book continues from that point to list the equipment purchased and a brief explanation of operational techniques to fabricate the designed parts. The material types used are also covered in depth. In the final chapters the flight testing experience is elaborated on. For the reader who would like to delve further into areas beyond the scope of this book, reference books are listed. These include such topics as advanced rotor aerodynamics, rotor planform theory, or training instruction on the various pieces of equipment required to fabricate the parts. This is not necessarily an easy read but there is much to learn and many interesting facets to explore whether just for an understanding or as an actual project to pursue further.

Now Solo Jennifer Murray 2003 In the year of the Millennium, Jennifer Murray businesswoman, artist, housewife and mother of three became the first woman to pilot a helicopter around the world in a record braking solo flight. Escorted all the while by Colin Bodill, several times world microlight champion, she single-handedly chartered the helicopter across the globe. They faced a gruelling 30,000 miles - 8,000 of which covered water - on a trip the aviation world believed could not be done. The helicopter designer gave them one in five chance of making it. Now Solo documents Jennifer and Colin's epic journey. Taken from the audio diaries which Jennifer kept at the end of each exhausting day, the book tells of the planning and endless bureaucracy and of the tempers and tiredness. This extraordinary adventure took them from Brooklands, England to Saudi Arabia, China, Russia, the United States and Canada. En route they persevered through engine failure, emergency landings, problems with fuel supply, chronic tiredness, tropical storms and Chinese fighter jets. This remarkable journey from Paris to the Arabian deserts and from Vietnam to Iceland and back to Britain again is an inspiration to men and woman everywhere.
