Re-searching Transitions in Indian History Radhika Seshan 2018-06-27 The idea of transitions in Indian history emerged early when the term 'transition' denoted shifts from one period to another. The notion of transition itself has moved beyond being primarily economic to include dimensions of society, culture and ideology. This volume brings together scholarly works that re-examine and re-define the concept of transition by looking into a range of subjects including religion, culture, gender, caste and community networks, maritime and mercantile modes, ideas of nationalism and historiographies across geographical and temporal settings. With contributions by leading scholars from South Asia, this book will be useful to scholars and researchers of ancient history, modern Indian history, sociology and social anthropology, and South Asian studies.

19th Century Maharashtra Shradha Kumbhojkar 2020-10-27 Maharashtra in the nineteenth century exhibits all the characteristics of a society standing at the crossroads of civilization. Western education, press, industrialisation and material changes in production and consumption patterns resulted in fundamental changes in the thinking of the people. The first half of the nineteenth century witnessed the beginning of the Postal Service in 1837, rise and spread of the native press and rudimentary education. The second half witnessed more dramatic events such as the coming of the Railways and the establishment of the Indian National Congress that changed the destiny of the subcontinent forever. The book takes a fresh look at the various aspects of nineteenth century Maharashtra. It includes the critiques and reviews of literature, language, history writing and women's reforms in this period. It argues that the elite attempts at social reform had their own inherent limitations. They could not reach the level of radicality reached by the subalterns whose lived experience of discrimination was the biggest stimulus for reform. Mahatma Phule stands out from among a range of thinkers in this period for his innovative understanding of the Indian reality. Phule was one

of the rare thinkers who reconciled the Indian reality with its Universal counterpart.

Introduction to Time Series and Forecasting Peter J. Brockwell 2013-03-14 Some of the key mathematical results are stated without proof in order to make the underlying theory accessible to a wider audience. The book assumes a knowledge only of basic calculus, matrix algebra, and elementary statistics. The emphasis is on methods and the analysis of data sets. The logic and tools of model-building for stationary and non-stationary time series are developed in detail and numerous exercises, many of which make use of the included computer package, provide the reader with ample opportunity to develop skills in this area. The core of the book

covers stationary processes, ARMA and ARIMA processes, multivariate time series and state-space models, with an optional chapter on spectral analysis. Additional topics include harmonic regression, the Burg and Hannan-Rissanen algorithms, unit roots, regression with ARMA errors, structural models, the EM algorithm, generalized state-space models with applications to time series of count data, exponential smoothing, the Holt-Winters and ARAR forecasting algorithms, transfer function models and intervention analysis. Brief introductions are also given to cointegration and to non-linear, continuous-time and long-memory models. The time series package included in the back of the book is a slightly modified version of the package ITSM, published separately as ITSM for Windows, by Springer-Verlag, 1994. It does not handle such large data sets as ITSM for Windows, but like the latter, runs on IBM-PC compatible computers under either DOS or Windows (version 3.1 or later). The programs are all menu-driven so that the reader can immediately apply the techniques in the book to time series data, with a minimal investment of time in the computational and algorithmic aspects of the analysis.
