**Japan's Nuclear Disaster and the Politics of Safety Governance** Florentine Koppenborg 2023-06-15 In Japan's Nuclear Disaster and the Politics of Safety Governance, Florentine Koppenborg argues that the regulatory reforms taken up in the wake of the Fukushima disaster on March 11, 2011, directly and indirectly raised the costs of nuclear power in Japan. The Nuclear Regulation Authority resisted capture by the nuclear industry and fundamentally altered the environment for nuclear policy implementation. Independent safety regulation changed state-business relations in the nuclear power domain from regulatory capture to top-down safety regulation, which raised technical safety costs for electric utilities. Furthermore, the safety agency's extended emergency preparedness regulations expanded the allegorical backyard of NIMBY demonstrations. Antinuclear protests, mainly lawsuits challenging restarts, incurred additional social acceptance costs. Increasing costs undermined pronuclear actors' ability to implement nuclear power policy and caused a rift inside the "nuclear village." Small nuclear safety administration reforms were, in fact, game changers for nuclear power politics in Japan. Koppenborg's findings contribute to the vibrant conversations about the rise of independent regulatory agencies, crisis as a mechanism for change, and the role of nuclear power amid global interest in decarbonizing our energy supply.

**Poland in the Single Market** Anna Visvizi 2020-10-21 By all accounts, the case of Poland and its segue to market economy and democracy is a success story: 30 years of uninterrupted growth and development, infrastructure expansion, and modernization of the economy and society. Epochal changes have unfolded in a timespan of merely three decades. Change has taken place so fast that children born in late 1980s and onwards cannot remember what life in Poland under communism was like and cannot relate to it. Also, many elderly people, easy victims of romanticizing their own youth, tend to forget. As a result, the uniqueness of Polish transition and transformation, the boldness and efficiency of reforms, and the success that Polish society mastered together, tend to be undermined today both domestically and internationally. Poland has now been a member of the EU for more than 15 years. During that time, Poland's image on the EU scene evolved from newcomer, through 'model child', champion of growth, to – in some respects – a maverick. This volume's objective is to remind society, old and young, researchers, scholars and practitioners, that Poland's success is an outcome of well-thought out and bold structural reforms implemented in a swift and timely manner, of society's support for these reforms, and of third actors' benign assistance. Looking back on the 30 years since the collapse of communism, and at the over 15 years of EU membership, this book offers an interdisciplinary, comprehensive and critical insight into factors and processes that have led to today's Poland.

**Spatial Planning Systems and Practices in Europe** Mario Reimer 2014-02-05 Ideal for students and practitioners working in spatial planning, the Europeanization of planning agendas and regional policy in general Spatial Planning Systems and Practices in Europe develops a systematic methodological framework to analyze changes in planning systems throughout Europe. The main aim of the book is to delineate the coexistence of continuity and change and of convergence and divergence with regard to planning practices across Europe. Based on the work of experts on spatial planning from twelve European countries the authors underline the specific and context-dependent variety and disparateness of planning transformation, focusing on the main objectives of the changes, the driving forces behind them and the main phases and turning points, the main agenda setting actors, and the different planning modes and tools reflected in the different "policy and planning styles". Along with a methodological framework the book includes twelve country case studies and the comparative conclusions covering a variety of planning systems of EU member states. According to the four "ideal types" of planning systems identified in the EU Compendium, at least two countries have been selected from each of the four different planning traditions: regional-economic (France, Germany), Urbanism (Greece, Italy), comprehensive/integrated (Denmark, Finland, Netherlands, Germany), "land use planning" (UK, Czech Republic, Belgium/Flanders), along with two additional case studies focusing on the recent developments in eastern European countries by looking at Poland and in southern Europe looking at Turkey.

**The Politics of English Second Language Writing Assessment in Global Contexts** Todd Ruecker 2018-04-17 Reflecting the internationalization of the field of second language writing, this book focuses on political aspects and pedagogical issues of writing instruction and testing in a global context. High-stakes assessment impacts the lives of second language (L2) writers and their teachers around the world, be it the College English Test in China, Common Core-aligned assessments in the U.S., English proficiency tests in Poland, or the material conditions (such as access to technology, training, and other resources) affecting a classroom. With contributions from authors working in ten different countries in a variety of institutional contexts, the chapters examine the uses and abuses of various writing-related assessments, and the policies that determine their form and use. Representing a diverse range of contexts, methods, and disciplines, the authors jointly call for more equitable testing systems that consider the socioeconomic, psychometric, affective, institutional, and needs of all students who strive to gain access to education and employment opportunities related to English language proficiency.
