The Glycemic Index Elena Philippou 2016-09-19  
In 1981, David Jenkins, Thomas Wolever, and colleagues introduced the concept of the glycemic index (GI) to differentiate carbohydrates based on the rate of blood glucose rise following their consumption. Although GI was first used in diet therapy for diabetes, research evidence has accumulated since then to thousands of publications from all over the world with applications for prevention and/or management of many diseases, as well as effects on physiological states and exercise. The Glycemic Index: Applications in Practice has gathered together, in an unbiased and critical way, all the evidence and research on GI, including diabetes, cardiovascular disease, cancer, obesity, polycystic ovary syndrome, pregnancy outcomes, sports performance, eye health, and cognitive functioning. It provides a detailed explanation on how to correctly measure a food's GI, how the GI of food products can be

altered, as well as the use and misuse of GI labelling around the globe. The contributors are either pioneers or experts in the area of GI from all around the globe, including Australia, Canada, Europe, and the United States. The book is a valuable source of information for healthcare professionals of various disciplines, nutritionists, dietitians, food scientists, medical doctors, sports scientists, psychologists, public health (nutrition) policy makers, and students in these fields, as well as an important addition to university libraries.

*Handbook of Arabian Medicinal Plants* Shahina A. Ghazanfar 1994-08-24 The Handbook of Arabian Medicinal Plants is the first illustrated reference on the uses of plants in the Arabian Peninsula. It documents and preserves the existing knowledge in a region where social patterns are rapidly changing. The book emphasizes the need for preserving social and cultural patterns and examines the close relationship between those patterns and nature. This excellent source

Chocolate Science and Technology Emmanuel Ohene Afoakwa 2011-08-24 This book provides an overview of the science and technology of chocolate manufacture from cocoa production, through the manufacturing processes, to the sensory, nutrition and health aspects of chocolate consumption. It covers cocoa cultivation and production with special attention paid to cocoa bean composition, genotypic variations in the bean, post-harvest pre-treatments, fermentation and drying processes, and the biochemical basis of these operations. The scientific principles behind industrial chocolate manufacture are outlined with detailed explanations of the various stages of chocolate manufacturing including mixing, refining, conching and tempering. Other topics covered include the chemistry of flavour formation and

development during cocoa processing and chocolate manufacture; volatile flavour compounds and their characteristics and identification; sensory descriptions and character; and flavour release and perception in chocolate. The nutritional and health benefits of cocoa and chocolate consumption are also addressed. There is a focus throughout on those factors that influence the flavour and quality characteristics of the finished chocolate and that provide scope for process optimization and improvement. The book is designed to be a desk reference for all those engaged in the business of making and using chocolate worldwide; confectionery and chocolate scientists in industry and academia; students and practising food scientists and technologists; nutritionists and other health professionals; and libraries of institutions where food science is studied and researched. an overview of the science behind chocolate manufacture covers the whole process from cocoa production, through manufacturing,

### **Eriophyoid Mites: Progress and Prognoses**

Edward A. Ueckermann 2010-09-23 Fourteen informative papers dealing with their DNA, species interactions, adventiveness, host specificity, potential as bio-control agents of weeds, chemical control, behaviour, their role in fungal pathogen epidemiology, influence in forests and on ornamentals, collecting and mounting techniques and their interaction with crops are presented here. This is an extensive and valuable contribution to eriophyoid science and a must for present and future researchers in this field.

Traveling Cultures and Plants Andrea Pieroni 2009-10 The tremendous increase in migrations and diasporas of human groups in the last decades are not only bringing along challenging issues for society, especially related to the

economic and political management of multiculturalism and culturally effective health care, but they are also creating dramatic changes in traditional knowledge, beliefs and practices (KBP) related to (medicinal) plant use. The contributors to this volume – all internationally recognized scholars in the field of ethnobiology, transcultural pharmacy, and medical anthropology – analyze these dynamics of traditional knowledge in especially 12 selected case studies. Ina Vandebroek, features in Nova's "Secret Life of Scientists", answering the question: just what is ethnobotany? *Zulu Medicinal Plants* Anne Hutchings 1996 "The work should be of use to botanists, chemists, ethnopharmacologists, medical workers and anthropologists. Recent research indicates that Zulu traditional medicine is a working, adaptive and self-monitoring system, eminently worthy of further research. With the flora from which it comes, it is a heritage to be highly valued and conserved."--BOOK JACKET.

*Dying on the Vine* George D. Gale 2011-07-05  
Dying on the Vine chronicles 150 years of scientific warfare against the grapevine's worst enemy: phylloxera. In a book that is highly relevant for the wine industry today, George Gale describes the biological and economic disaster that unfolded when a tiny, root-sucking insect invaded the south of France in the 1860s, spread throughout Europe, and journeyed across oceans to Africa, South America, Australia, and California—laying waste to vineyards wherever it landed. He tells how scientists, viticulturalists, researchers, and others came together to save the world's vineyards and, with years of observation and research, developed a strategy of resistance. Among other topics, the book discusses phylloxera as an important case study of how one invasive species can colonize new habitats and examines California's past and present problems with it.

**Textbook of Chemical Peels** Philippe Deprez  
2018-10-08 Chemical peels have returned to the  
forefront of the practitioner's armamentarium  
and are popular because they offer nearly  
immediate results. The Textbook of Chemical  
Peels is the definitive guide to all types of  
chemical peel treatments. It covers the practical  
application and scientific background for a wide

variety of chemical peels. The book reflects the  
new classification of peels as a medical, rather  
than cosmetic, treatment and helps providers by  
making chemical peel formulas easier, safer, and  
quicker to use. The book covers the appropriate  
selection of peels to treat the face, scalp, neck,  
hands, body, and forearms. It also discusses the  
use of peels to treat aging skin, stretch marks,  
scars, melasma, chloasma, acne,  
postinflammatory hyperpigmentation, and scalp  
keratoses. The mechanism of action, indication,  
application, and results are discussed for a  
variety of chemical peels including alpha hydroxy  
acids, trichloroacetic acid, salicylic acid,  
resorcine, and phenols. Also covered are any  
contraindications, precautions, and safety issues.  
This edition includes new material on adjunctive  
procedures such as microneedling and  
mesotherapy as well as new information on  
mosaic peels. Treatment prior to and following  
the peel are also discussed in detail, and a full  
chapter is devoted to discussing complications

*Arthropod Management in Vineyards*: Noubar J. Bostanian 2012-06-26 Provides a state-of-the-science overview of arthropods affecting grape production around the world. Vineyard pest management is a dynamic and evolving field, and the contributed chapters provide insights into arthropods that limit this important crop and

its products. Written by international experts from the major grape-growing regions, it provides a global overview of arthropods affecting vines and the novel strategies being used to prevent economic losses, including invasive pests affecting viticulture. The book contains reviews of the theoretical basis of integrated pest management, multiple chapters on biological control, current status of chemical control, as well as in-depth and well-illustrated reviews of the major arthropod pests affecting grape production and how they are being managed worldwide. This text will serve as a primary resource for applied entomologists, students, growers, and consultants with interests at the intersection of viticulture and applied entomology.

observations of the pupil. Advances in the past few decades have been nothing short of explosive. How can the student, physician, or basic research scientist stay in touch with these electrifying studies? To help with the answer to this question, the authors set as their goal the development of increased understanding so that the student, research scientist, and ophthalmologist can cope with the latest discoveries. The authors want to narrow what appears to be an ever-increasing gap between basic science and ophthalmology. The basic aspects of pharmacology have been presented in light of the natural physiology. In this regard, while distinctions among endogenous mechanisms, drug effects, and the pathogenesis of disease are to be separately recognized, appreciation must be given to the concept that both the desirable and unwanted manifestations or functions caused by either disease or drugs must very often represent a quantitative change in normal metabolic pathways.

Chemical and Process Industries Osei-Wusu Achaw 2021-08-09 This textbook presents a thorough overview of chemical and process industries. It describes the standard technologies and the state of the industries and the manufacturing processes of specific chemical and allied products. It includes examples of industries in Ghana, highlighting the real-world applications of these technologies. The book introduces new developments in the processes in chemical industry, focuses on the technology and methodology of the processes and the chemistry underlying them. It offers guidance on operating of processing units. Furthermore, it includes sections on safety and environmental pollution control in industry. With a pedagogical and comprehensive approach, utilizing illustrations and tables, this book provides students in chemical engineering and industrial chemistry with a concise and up-to-date overview of this diverse subject.

In particular, this work describes prevailing concepts and theories based on historical and current literature and identifies what new technologies and approaches are available to researchers in the field. Chapters address how root herbivore behavior and physiology is affected by the biotic and abiotic soil environment, cover case studies of globally significant pests and discuss advances

in molecular techniques. Covering all aspects of behavioral and physiological responses of root herbivores to their environment, this will be valuable reading for researchers and professionals in agricultural entomology, plant science, ecology and soil science.
