The EU as a State-builder in International Affairs Labinot Greiçevci 2021-11-04 This book presents a systematic, in-depth, and comparative analysis of the role of the EU in the process of international state-building and is one of the first comprehensive books to do so at an international level. Taking the case of Kosovo, it examines the EU's role in the birth of a state in comparison to other international actors from 1999 to 2008 and moves on to analyse the EU's role in norm diffusion in the post-independence period (2008–2020). Throughout the book, the author draws parallel analyses with broader debates and scholarly literature regarding the EU's role as a state-builder or norm-diffuser. Combining a liberal peace thesis framework with the normative power Europe (NPE) approach, it analyses how successful the EU and other international actors were in the diffusion of tangible and normative impacts in the process of state-building in Kosovo (1999–2008), along with the EU's diffusion of normative impact from 2008 to 2020. Finally, it scrutinises the role of the EU and other international actors in the processes of state-building through transference tools (funding) and overt tools (political role). This book will be of key interest to scholars and students of EU foreign policy, European politics, peace and conflict studies, the Western Balkans, state-building, international organisations, and more broadly to international relations.

The Headscarf Controversy Hilal Elver 2014 Hilal Elver offers an in-depth study of the escalating controversy over the right of Muslim women to wear headscarves. Examining legal and political debates in Turkey, several European countries including France and Germany, and the United States, Elver shows the troubling exclusion of pious Muslim women from the public sphere in the name of secularism, democracy, liberalism, and women's rights. After evaluating political actions and court decisions from the national level of individual governments to the international sphere of the European Court of Human Rights, Elver concludes that judges and legislators are increasingly influenced by social pressures concerning immigration and multiculturalism, and by issues such as Islamophobia, the "war on terror," and security concerns. She shows how these influences have resulted in a failure on the part of many Western governments to recognize and protect essential individual freedoms. Employing a critical legal theory perspective to the headscarf controversy, Elver argues that law can be used to change underlying social conditions shaping the role of religion, and also the position of women in modern society. The Headscarf Controversy demonstrates how changes in law across nations can be used to restore state commitments to human rights.

Complexity, Security and Civil Society in East Asia Peter Hayes 2015-06-22 Complexity, Security and Civil Society in East Asia offers the latest understanding of complex global problems in the region, including nuclear weapons, urban insecurity, energy, and climate change. Detailed case studies of China, North and South Korea, and Japan demonstrate the importance of civil society and 'civic diplomacy' in reaching shared solutions to these problems in East Asia and beyond. Each chapter describes regional civil society initiatives that tackle complex challenges to East Asia's security. In doing so, the book identifies key pressure points at which civil society can push for constructive changes—especially ones that reduce the North Korean threat to its neighbors. Unusually, this book is both theoretical and practical. Complexity, Security and Civil Society in East Asia presents strategies that can be led by civil society and negotiated by its diplomats to realize peace, security, and sustainability worldwide. It shows that networked civic diplomacy offers solutions to these urgent issues that official 'complex diplomacy' cannot. By providing a new theoretical framework based on empirical observation, this volume is a must read for diplomats, scholars, students, journalists, activists, and individual readers seeking insight into how to solve the crucial issues of our time.

This invaluable guide provides step-by-step instructions for investigating Internet crimes, including locating, interpreting, understanding, collecting, and documenting online electronic evidence to benefit investigations. Cybercrime is the fastest growing area of crime as more criminals seek to exploit the speed, convenience and anonymity that the Internet provides to commit a diverse range of criminal activities. Just Energy Transitions and Coal Bed Methane Theresia Betty Sumarno 2021-10-18 This book discusses how Coal Bed Methane (CBM) could help the acceleration of the energy transition in a 'just' way in Indonesia, due to the country's potential CBM reserves (and current dependence on climate damaging coal). Developing countries face multiple challenges in achieving their energy transitions. CBM in Indonesia could potentially be a catalyst for energy transition and subsequently improve access to energy. However, CBM faces numerous challenges and although Indonesia first developed its domestic CBM sector over more than a decade ago, they are still to implement this successfully. This book exposes the challenges and opportunities of CBM, exploring what lessons other countries could learn from Indonesia to improve the industry with a view to achieving energy transition and climate change targets. This book will be an invaluable reference for researchers and practitioners working in this field.

Fixing American Cybersecurity Larry Clinton 2023-02-01 Advocates a cybersecurity "social contract" between government and business in seven key economic sectors Cybersecurity vulnerabilities in the United States are extensive, affecting everything from national security and democratic elections to critical infrastructure and economy. In the past decade, the number of cyberattacks against American targets has increased exponentially, and their impact has been more costly than ever before. A successful cyber-defense can only be mounted with the cooperation of both the government and the private sector, and only when individual corporate leaders integrate cybersecurity strategy throughout their organizations. A collaborative effort of the Board of Directors of the Internet Security Alliance, Fixing American Cybersecurity is divided into two parts. Part One analyzes why the US approach to cybersecurity has been inadequate and ineffective for decades and shows how it must be transformed to counter the heightened systemic risks that the nation faces today. Part Two explains in detail the cybersecurity strategies that should be pursued by each major sector of the American economy: health, defense, financial services, utilities and energy, retail, telecommunications, and information technology. Fixing American Cybersecurity will benefit industry leaders, policymakers, and business students. This book is essential reading to prepare for the future of American cybersecurity.

The Ecology of the New Economy Jacob Park 2017-09-08 A "revolution" is taking place in the development of global information and communications technologies. In slightly more than a decade, the World Wide Web has gone from the idea of an obscure English scientist to a consumer-oriented technology system with an expected one billion users by 2005. The technologies that enable this to happen are advancing rapidly, which is leading to both an unprecedented number of start-up companies and a host of innovative new alliances between companies. The growth has been so rapid and unexpected that little research and analysis has yet been done on what impact this transformation has had or will have on the ability of companies to meet the global sustainability challenge. As environmental strategy has traditionally been portrayed in terms of risk cutting and resource efficiency, there is a danger that critical business issues such as information technology, R&D and e-commerce development are examined in isolation from the wider sustainable business perspective. An important objective of the book is to explore, document and raise awareness of sustainability concerns arising from the emerging global information economy. The information economy is defined in the broadest sense possible, including software, hardware, telecommunication – traditional and wireless – and advanced communication technologies. Some of the key issues and questions that are examined include: Case studies on how and to what degree sustainability concerns are being integrated into the business model of electronic, telecommunication and dot.com firms. The relationship between the diffusion of information and communication technologies and the energy and resource intensity of companies. The role of information and communication technologies in the shaping of policies for sustainability, its impacts on sustainable or unsustainable lifestyles and its implications for the interaction between companies and other actors. Corporations and the global digital divide. The Ecology of the New Economy will be of interest to academics, governments, businesses, and non-governmental groups who are trying to understand the linkages and relationship between the two of our greatest global challenges: the information revolution and environmental sustainability.

Sustainable Transport Studies in Asia Akimasa Fujiwara 2013-06-04 This book aims to provide a good understanding of and perspective on sustainable transport in Asia by focusing on economic, environmental, and social sustainability. It is widely acknowledged that the current situation and trends in transport are not always sustainable in Asia, due in part to the fast-growing economy and the astounding speed of urbanization as well as least-mature governance. As essential research material, the book provides strong support for policy makers and planners by comprehensively covering three groups of strategies, characterized by the words "avoid" (e.g., urban form design and control of car ownership), "shift" (e.g., establishing comprehensive transportation systems and increasing public transportation systems for both intracity and intercity travel), and "improve" (e.g., redesign of paratransit system, low-emission vehicles, intelligent transportation systems, and eco-life). These are elaborated in the book alongside consideration of the uncertainty of policy effects in the future. The book is also valuable for scholars and scientists because of the diverse methodologies presented and proposed herein. Among those are the four-step model with full feedback mechanisms, the bi-level programming model with sustainability goals, data envelopment analysis and stochastic frontier analysis approaches, structural equation models, discrete and/or continuous choice models, copula-based models, survival models, and driving risk models with short-term memory. Using data collected from more than ten Asian cities, including those in both developed and developing nations, the pathway to sustainable transport in Asia gradually becomes clear.

Cultures and Globalization Helmut K Anheier 2007-04-13 "In the age of globalization we are no longer home alone. Migration brings other worlds into our own just as the global reach of the media transmits our world into the hearts and minds of others. Often incommensurate values are crammed together in the same public square. Increasingly we all today live in the kind of 'edge cultures' we used to see only on the frontiers of civilizations in places like Hong Kong or Istanbul. The resulting frictions and fusions are shaping the soul of the coming world order. I can think of no other project with the ambitious scope of defining this emergent reality than The Cultures and Globalization project. I can think of no more capable minds than Raj Isar and Helmut Anheier who can pull it off." Nathan Gardels, Editor-in-Chief, NPQ, Global Services, Los Angeles Times Syndicate/Tribune Media "This series represents an innovative approach to the central issues of globalization, that phenomenon of such undefined contours."- Lupwishi Mbuyumba, Director of the Observatory of Cultural Policies in Africa The world's cultures and their forms of creation, presentation, and preservation are deeply affected by globalization in ways that are inadequately documented and understood. The Cultures and Globalization Series is designed to fill this void in our knowledge. Analyzing the relationship between globalization and cultures is the aim of the Series. In each volume, leading experts as well as young scholars will track cultural trends connected to globalization throughout the world, covering issues ranging from the role of cultural difference in politics and governance to the evolution of the cultural economy and the changing patterns of creativity and artistic expression. Each volume will also include an innovative presentation of newly developed 'indicator suites' on cultures and globalization that will be presented in a user-friendly form with a high graphics content to facilitate accessibility and understanding Like so many phenomena linked to globalization, conflicts over and within the cultural realms crystallize great anxieties and illusions, through misplaced assumptions, inadequate concepts, unwarranted simplifications and instrumental readings. The aim here is to marshal evidence from different disciplines and perspectives about the culture, conflict and globalization relationships in conceptually sensitive ways.

Crossing Borders Michelle Ann Miller 2017-12-06 This multidisciplinary book examines the diverse ways in which environmental disasters with compounding impacts are being governed as they traverse sovereign territories across rapidly urbanising societies in Asia and the Pacific. Combining theoretical advances with contextually rich studies, the book examines efforts to tackle the complexities of cross-border environmental governance. In an urban age in which disasters are not easily contained within neatly delineated jurisdictions, both in terms of their interconnected causalities and their cascading effects, governance structures and mechanisms are faced with major challenges related to cooperation, collaboration and information sharing. This book helps bridge the gap between theory and practice by offering fresh insights and contrasting explanations for variations in transboundary disaster governance regimes among urbanising populations in the Asia-Pacific.

China's Finance in Africa Evelyn F. Wamboye 2021-03-04 This Element provides a detailed analysis of official finances from China to Africa with special attention to the question of Africa's foreign finances policy. The findings reveal that Africa has an infrastructure gap and Chinese finances are largely used to fund infrastructure projects. However, the majority of the funds are loans, which are mortgaged on Africa's natural resources. In addition, Chinese firms are the ones implementing the projects, and much of the raw material and labor is imported from China. All these calls for Africa to institute a coherent foreign finances policy that ensures African countries fully benefit from these finances.

Handbook of Research on E-Business Standards and Protocols: Documents, Data and Advanced Web Technologies

Kajan, Ejub 2012-02-29 Electronic business is a major force shaping the digital world. Yet, despite of years of research and standardization efforts, many problems persist that prevent e-business from achieving its full potential. Problems arise from different data vocabularies, classification schemas, document names, structures, exchange formats and their varying roles in business processes. Non-standardized business terminology, lack of common acceptable and understandable processes (grammar), and lack of common dialog rules (protocols) create barriers to improving electronic business processes. Handbook of Research on E-Business Standards and Protocols: Documents, Data and Advanced Web Technologies contains an overview of new achievements in the field of e-business standards and protocols, offers in-depth analysis of and research on the development and deployment of cutting-edge applications, and provides insight into future trends. This book unites new research that promotes harmony and agreement in business processes and attempts to choreograph business protocols and orchestrate semantic alignment between their vocabularies and grammar. Additionally, this Handbook of Research discusses new approaches to improving standards and protocols, which include the use of intelligent agents and Semantic Web technology.
