It combines the various business disciplines with quantitative methods to identify optimal solutions to more efficiently achieve a firm's organizational objectives. The topics discussed in this textbook are readily accessible to students with a background in the principles of microeconomics and business mathematics. Benchmarking in Services 2006

Benchmarking is defined as "an improvement process in which a company measures its performance against that of best-in-class companies, determines how those companies achieved their performance levels, and uses the information to improve its own performance." (Bemowski, 1992, p. 20). Under the best of circumstances,

benchmarking can be difficult, time-consuming, and costly. Service benchmarking is made more difficult than benchmarking in manufacturing because it appears that those things which are important to the customer may differ significantly from one service industry to another (Sower, et al., 2001). Because of the question about the universality of the definition of quality in the service industry and the impact on benchmarking activities, the editors obtained as broad a cross-section of papers for this special issue as possible. The industries represented by the nine papers in this issue cover a broad spectrum of service industries from sports to banking; from laboratory services to hospitality and tourism.

Managerial Economics and Strategy

Jeffrey M. Perloff 2014 Intended primarily for Managerial Economics courses, this text also provides practical content to current and aspiring industry professionals.

Economics is a powerful tool that can help managers to manage effectively. In Managerial Economics Jeffrey Perloff and James Brander use real-world issues and examples from actual markets to show future managers how economic principles can be used in business decisions. In text examples and boxed mini-cases use actual data to illustrate how to use basic models. For example, to illustrate rivalry in oligopolistic markets, the authors look at rivalry between United and American Airlines and between Coke and Pepsi. Mini-case examples include why American Apparel is vertically integrated and why upscale manufacturers limit the number of designer hand-bags a customer is allowed to buy. To help future managers learn to solve new problems, Perloff and Brander repeatedly demonstrate problem-solving through in-text Q&As. Each Q&A poses an important managerial or economic issue and demonstrates how to solve it using a step-by-step approach.
