Supporting Workplace Learning Rob F. Poell 2011-01-19 During the 1990s, the workplace was rediscovered as a rich source of learning. The issue of workplace learning has since received increasing attention from academics and practitioners alike but is still under-researched empirically. This book brings together a range of state-of-the-art research papers addressing interventions to support learning in the workplace. The authors are experienced international scholars who have an interest in making HRD and workplace learning practices more evidence-based through practical relevant research. Although workplace learning is largely an autonomous process, many organizations want to manage it as part of their broader HRD strategy. There are limits, however, to the extent to which the complex dynamics of learning in the workplace can be guided in pre-determined desirable directions. This tension between the possible strengths of workplace learning and the limits of managing it is at the heart of this volume. The book is broken into three sections. The first section deals with workplace learning interventions, including HRD practitioners' strategies, training and development activities, and e-learning programs. The second section investigates the impact of social support, or lack thereof, in workplace learning, such as mentoring, coaching, and socialization practices. The third section addresses collective learning in the workplace, looking at teams, knowledge productivity, and collaborative capability building.

Perceptions and Practices of Instructors' Training: A Case Study Shiba Bagale 2020-01-29 This research book is about the transfer of training. The main theme of this research is how the training participants perceived training and how they are practicing in their real workplace. The qualitative method was implied where class observations and in-depth interviews were conducted to explore the perceptions and practices of the training participants along with the coping strategies on the challenges they have faced. The findings were that adequate time was not provided for the preparation, though some planning was done. The practice of the training in both the skills and knowledge was seen, where practice of skill is more applied. Some of the knowledge and skills were not practiced. Assessment was done by using both the formative and summative evaluation tools. Finally, this study concluded that there is the need of supervisors and guidance in practicing the skills and knowledge in their workplace.

Comprehensive Advisor Training and Development Karen L. Archambault 2023-07-03 Co-published with NACADAAdvisors are focused on the success of their students. In order to do so, those who serve students must have the knowledge, skills, abilities, and encouragement to do their work. This edited collection provides a practical framework for advisor training and professional development, underpinned by the theoretical rationale for those frameworks. This text is not focused on the “what” of advisor training but is instead intentionally focused on the “how” and the “why,” encouraging those responsible for development and implementation to have a clear means by which to support advisor success. Readers of this text will identify the centrality of the NACADA Core Values and Core Competencies to effective training and development but will also gain a practical suite of tools to be used in various higher educational contexts. Including, but not limited to initial program creation, the authors consider complex concerns such as funding, technology, intercultural competence, and self-care--among others--as components of a comprehensive program to support advising professionals.

Contemporary Apprenticeship Alison Fuller 2014-06-11 Throughout the world, people understand the meaning of 'apprenticeship'. As a model of learning and skill formation, apprenticeship has adapted over the years to reflect changes in work, in technology, and in the types of knowledge that underpin occupational expertise. Apprenticeship serves the needs of government, as well as employers, individuals and society more generally. These needs have always co-existed in dynamic tension. This book explores the contemporary state of apprenticeship in Europe, the United States, Canada, and Ghana. The chapters present perspectives from leading researchers in the field, showing how apprenticeship is evolving and changing in every country (crossing boundaries of age, sector and levels of skill and knowledge) and examining the ability of apprenticeship to facilitate both vertical progression - particularly to higher education - and horizontal progression between jobs and sectors. As such, apprenticeship remains at the core of debates about vocational learning and the nature of expertise. This book was originally published as a special issue of the Journal of Vocational Education and Training.

Elaine Blech, one of the most highly regarded names in talent development, has set out to identify the perfect blend of content mastery and audience insight. Machine Learning for Absolute Beginners Oliver Theobald 2018 "The manner in which computers are now able to mimic human thinking to process information is rapidly exceeding human capabilities in everything from chess to picking the winner of a song contest. In the modern age of machine learning, computers do not strictly need to receive an 'input command' to perform a task, but rather 'input data'. From the input of data they are able to form their own decisions and take actions virtually as a human world. But given it is a machine, it can consider many more scenarios and execute far more complicated calculations to solve complex problems. This is the element that excites data scientists and machine learning engineers the most. The ability to solve complex problems never before attempted. This book will dive in to introduce machine learning, and is ideal for beginners starting out in machine learning."--page 4 of cover.
