An indispensable reference for anyone concerned with the future of American colleges and universities. Whether it is advances in information technology, organized social movements, or racial inequality and social class stratification, higher education serves as a lens for examining significant issues within American society. Gender Integration in NATO Military Forces Lana Obradovic 2016-04-15 Numerous states have passed gender integration legislation permanently admitting women into their military forces. As a result, states have dramatically increased women's numbers, and improved gender equality by removing a number of restrictions. Yet despite changes and initiatives on both domestic and international levels to integrate gender perspectives into the military, not all states have improved to the same extent. Some have successfully promoted gender integration in the ranks by erasing all forms of discrimination, but others continue to impede it by setting limitations on equal access to careers, combat, and ranks. Why do states abandon their policies of exclusion and promote gender integration in a way that women's military participation becomes an integral part of military force? By examining twenty-four NATO member states, this book argues that civilian policymakers and military leadership no longer surrender to parochial gendered division of the roles, but rather support integration to meet the recruitment numbers due to military modernization, professionalization and technological advancements. Moreover, it proposes that increased pressure by the United Nations to integrate gender into security and NATO seeking standardization and consistency on the international level, and women's movements on the domestic level,

are contributing to greater gender integration in the military. Winner of the 2015 ERGOMAS "Best Book in Civil-Military Relations" Award.

Economic Analysis of Animal Diseases Food and Agriculture Organization of the United Nations 2018-08-21 Animal health and economics are closely linked. Any decision taken to prevent, control and eliminate an animal disease is based not only on the technical knowledge available about a particular disease but also on the effectiveness and socio-economic aspects associated with interventions and mitigation measures implemented by governments, producers and all the actors along the livestock value chains. Economic rationale drives decisions in assessing particular investments which are likely to result in a benefit for society or for a specific stakeholder, including livestock farmers and communities. These guidelines prepared by FAO will contribute to a better understanding of the importance of economic

analysis when assessing the impact of a particular animal disease in production, trade, market access, food security and livelihoods of rural communities, or when designing or implementing an animal health strategy at national, regional or global level. This framework will provide a good communication tool between animal health technicians, veterinarians and economists in developing countries and will encourage a well informed collaboration between veterinarians, animal health experts, economists and social scientists for livestock and socio-economic development. Economic analysis should be an essential part of animal disease policies and disease management strategies.
