Box Jellyfish Elizabeth Raum 2016-02-02 All of these animals—from the mostly innocent black widow spider to the deadly taipan snake—have one thing in common: they use venom, or poison, for defense. Read about how these poisonous animals survive in their natural habitats and what part they play in the food chains and ecosystems in which they live. The question and answer feature throughout the book promotes reader inquiry, while the list of resources encourages further research and learning. This photo-illustrated book for elementary readers describes the venomous box jellyfish of the Pacific and Indian Oceans. Readers learn how these jellies use venom to kill prey and as a protection against predators. Also explains where they live and what to do when they are encountered.

Coral Reefs (New & Updated Edition) Gail Gibbons 2019-11-12 What is life like in a coral reef? What do corals eat? Why are corals more colorful at nighttime? Learn about some of the most beautiful locations in the natural world Marine biologists believe coral reefs existed 400 million years ago, when dinosaurs roamed the earth. Today this active environment is home to about 20,000 kinds of brilliantly colored corals, plants, and animals--more sea creatures than are found anywhere else in the world. The Great Barrier Reef in Australia is so large that astronauts can see it from outer space! Children in early elementary grades will enjoy Gibbon's informative text and clear, detailed illustrations on this journey into the unique lives of coral reefs.

Weird Sea Creatures Erich Hoyt 2015-03-05 An illustrated look at the weird and wonderful creatures that live in the very deepest parts of the sea. Humans have always wondered, with a mixture of fear and fascination, what lurks beneath the surface in the depths of the ocean. In this book, Erich Hoyt introduces 50 of the oddest creatures you will ever meet in the sea. From the carnivorous comb jelly to the lantern-carrying deep-sea dragonfish, from a vampire squid with giant eyes to dancing jellyfish, Hoyt explores these peculiar conditions and their equally peculiar environment. These creatures have adapted to lack of light and, using sound pulses (echolocation) or light-producing organs and pigment cells (emitting light via bioluminescence), they are able to communicate without giving their location away to predators. These stunning, captivating photographs weren't taken from the portholes of submarines. Photographers David Shale, Solvin Zanki and Jeff Rotman worked with oceanography institutes, museums and the BBC Natural History Unit, taking long cruises across the ocean to record and try to understand these little-studied residents of the deep sea. To capture the creatures for observation, a net was lowered far beneath the surface. As soon as the trawl was hauled aboard, the photographers would race to transfer the most unusual animals to fresh seawater aquariums in a chilled laboratory on board. These pages let readers gaze into strange, wild eyes and study faces with toothless or crooked smiles that witness the fruits of deep-sea evolution. Informative captions explain what the patterns of lights on their bodies are "saying" to others in their absolutely dark world. The wonder and extraordinary weirdness of what lives in the deep seas, so far away from us and yet so close, will become more familiar with this book.

Alien Ocean Animals (L3) (National Geographic Readers) National Geographic Kids 2020-01-09 Are these strange animals the stuff of nightmares or aliens from outer space? Turns out, they're real undersea animals! Find out how deep sea creatures use bizarre and fascinating adaptations to survive in their harsh environments in this Level 3 Reader. Journey through the depths of the ocean into the dark Midnight Zone and discover the mysterious animals that live there. Learn about how their bodies make their own light or adapt to living in low-light areas, how they hunt, what they eat, and how they keep themselves safe from predators. National Geographic Readers' combination of expert-vetted text, along with brilliant images and a fun approach to reading has proved to be a winning formula with kids, parents, and teachers. Level 3 text provides accessible, yet wide-ranging, information for fluent readers. A Place for Fish Melissa Stewart 2018-04-03 For nature lovers, environmentalists, and fans of fresh- and salt-water creatures. Scientists have discovered more than 25,000 species of fish on Earth and estimate there are thousands more to be identified, but the fish population has been steadily declining for decades. Human actions often contribute to the decline. How can we help ensure that there will be a safe place for fish? In simple yet compelling language, veteran science writer Melissa Stewart showcases twelve types of North American fish, from the North Atlantic swordfish to the spotted trunkfish of Florida's coral reefs. Her clear narrative shows the threats these fish face, and informative sidebars describe a wide variety of efforts to save them. Featuring glorious full-color illustrations by Higgins Bond and range maps for each fish, this is a perfect choice for budding young scientists, environmentalists, and nature lovers. This nonfiction picture book is one of the six titles in the prize-winning A Place for... series, a collection that opens readers' minds to a wide range of environmental issues and shows how humans are striving to protect animals and their natural habitats.

Little Monsters of the Ocean Heather L. Montgomery 2019

"Metamorphosis can be found throughout nature beyond just caterpillars and tadpoles. This fresh spin on the highly curricular topic explores some of the ocean's most fascinating creatures while explaining how and why these creatures metamorphose."--

The Extreme Life of the Sea Anthony R. Palumbi 2021-10-26 A thrilling tour of the sea's most extreme species, coauthored by one of the world's leading marine scientists. The ocean teems with life that thrives under difficult situations in unusual environments. *The Extreme Life of the Sea* takes readers to the absolute limits of the ocean world—the fastest and deepest, the hottest and oldest creatures of the oceans. It dives into the icy Arctic and boiling hydrothermal vents—and exposes the eternal darkness of the deepest undersea trenches—to show how marine life thrives against the odds. This thrilling book brings to life the sea's most extreme species, and tells their stories as characters in the drama of the oceans. Coauthored by Stephen Palumbi, one of today's leading marine scientists, *The Extreme Life of the Sea* tells the unforgettable tales of some of the most marvelous life forms on Earth, and the challenges they overcome to survive. Modern science and a fluid narrative style give every reader a deep look at the lives of these species. *The Extreme Life of the Sea* shows you the world's oldest living species. It describes how flying fish strain to escape their predators, how predatory deep-sea fish use red searchlights only they can see to find and attack food, and how, at the end of her life, a mother octopus dedicates herself to raising her batch of young. This wide-ranging and highly accessible book also shows how ocean adaptations can inspire innovative commercial products—such as fan blades modeled on the flippers of humpback whales—and how future extremes created by human changes to the oceans might push some of these amazing species over the edge.
