The Adventure of the Retired Colourman Arthur Conan Doyle 2020-09-28 Whilst the retired art supplier Josiah Amberley was at the theatre, his wife ran away with a young man and a good deal of their money. Amberley wants Holmes to track her down but the latter is too busy and sends Watson in his stead. But it soon turns out that Holmes is not the only one who has been asked to solve this case. So now the question is: will the pair be able to track the runaway wife down first? And is there more to the story than they have been told? "The Adventure of the Retired Colourman" is part of "The Case-Book of Sherlock Holmes". Sir Arthur Conan Doyle (1859-1930) was born in Scotland and studied medicine at the University of Edinburgh. After his studies, he worked as a ship's surgeon on various boats. During the Second Boer War, he was an army doctor in South Africa. When he came back to the United Kingdom, he opened his own practice and started writing crime books. He is best known for his thrilling stories about the adventures of Sherlock Holmes. He published four novels and more than 50 short-stories starring the detective and Dr Watson, and they play an important role in the history of crime fiction. Other than the Sherlock Holmes series, Doyle wrote around thirty more books, in genres such as science-fiction, fantasy, historical novels, but also poetry, plays, and non-fiction.

Scars Like Wings Erin Stewart 2019-10-01 Relatable, heartbreaking, and real, this is a story of resilience--the perfect novel for readers of powerful contemporary fiction like *Girl in Pieces* and *Every Last Word*. Before, I was a million things. Now I'm only one. The Burned Girl. Ava Lee has lost everything there is to lose: Her parents. Her best friend. Her home. Even her face. She doesn't need a mirror to know what she looks like--she can see her reflection in the eyes of everyone

around her. A year after the fire that destroyed her world, her aunt and uncle have decided she should go back to high school. Be "normal" again. Whatever that is. Ava knows better. There is no normal for someone like her. And forget making friends--no one wants to be seen with the Burned Girl, now or ever. But when Ava meets a fellow survivor named Piper, she begins to feel like maybe she doesn't have to face the nightmare alone. Sarcastic and blunt, Piper isn't afraid to push Ava out of her comfort zone. Piper introduces Ava to Asad, a boy who loves theater just as much as she does, and slowly, Ava tries to create a life again. Yet Piper is fighting her own battle, and soon Ava must decide if she's going to fade back into her scars . . . or let the people by her side help her fly. "A heartfelt and unflinching look at the reality of being a burn survivor and at the scars we all carry. This book is for everyone, burned or not, who has ever searched for a light in the darkness." --Stephanie Nielson, New York Times bestselling author of *Heaven Is Here* and a burn survivor

Concepts of Biology Samantha Fowler 2018-01-07 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical

thinking and clicker questions to help students understand--and apply--key concepts.

The Metamorphosis Franz Kafka 2019-06-18 New translation of The Metamorphosis by Franz Kafka. Poor Gregor Samsa! This guy wakes up one morning to discover that he's become a "monstrous vermin". The first pages of The Metamorphosis where Gregor tries to communicate through the bedroom door with his family, who think he's merely being lazy, is vintage screwball comedy. Indeed, scholars and readers alike have delighted in Kafka's gallows humor and matter-of-fact handling of the absurd and the terrifying. But it is one of the most enigmatic stories of all time, with an opening sentence that's unparalleled in all of literature.

Energy from Biomass Willeke Palz 2012-12-06 This book comes as part of a new series on Solar Energy R+D, including Biomass which is carried out by the European Community. The commission of the European Communities' Directorate General (XII) for Science, Research and Development is currently implementing, on a cost-sharing basis, a solar energy R+D programme through contracts with European industry, research institutions and universities. This programme includes a very strong activity on Biomass. Besides general R+D work on all aspects of Biomass growth and utilization which is reported elsewhere in this series, the Commission is currently starting a new activity on Pilot Plants based on the use of Biomass for energy purposes, and in particular on methanol production from wood. The commission considers that the subject of methanol production from wood offers important prospects for application within the European Community and in other parts of the world, in particular some of the developing countries & The state of art in Europe In this field is still considered to be very high as a result of related work which was performed in Europe during ~world War II and the time before.

The WEIRDest People in the World Joseph Henrich 2020-09-08 A New York Times Notable Book of 2020 A Bloomberg Best Non-Fiction Book of 2020 A Behavioral Scientist Notable Book of 2020 A Human Behavior & Evolution Society Must-Read Popular Evolution Book of 2020 A bold, epic account of how the co-evolution of psychology and culture created the peculiar Western mind that has profoundly shaped the modern world. Perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich, and Democratic. If so, you're rather psychologically peculiar. Unlike much of the world today, and most people who have ever lived, WEIRD people are highly individualistic, self-obsessed, control-oriented, nonconformist, and analytical. They focus on themselves—their attributes, accomplishments, and aspirations—over their relationships and social roles. How did WEIRD populations become so psychologically distinct? What role did these psychological differences play in the industrial revolution and the global expansion of Europe during the last few centuries? In *The WEIRDest People in the World*, Joseph Henrich draws on cutting-edge research in anthropology, psychology, economics, and evolutionary biology to explore these questions and more. He illuminates the origins and evolution of family structures, marriage, and religion, and the profound impact these cultural transformations had on human

psychology. Mapping these shifts through ancient history and late antiquity, Henrich reveals that the most fundamental institutions of kinship and marriage changed dramatically under pressure from the Roman Catholic Church. It was these changes that gave rise to the WEIRD psychology that would coevolve with impersonal markets, occupational specialization, and free competition—laying the foundation for the modern world. Provocative and engaging in both its broad scope and its surprising details, *The WEIRDest People in the World* explores how culture, institutions, and psychology shape one another, and explains what this means for both our most personal sense of who we are as individuals and also the large-scale social, political, and economic forces that drive human history. Includes black-and-white illustrations.

Understanding our Environment R M Harrison 2007-10-31 This 2nd edition of *Understanding Our Environment* has been reworked and greatly updated, providing a modern introductory level text for students of pollution and environmental chemistry. The book describes the basic concepts in relation to the chemistry of the atmosphere, freshwaters, oceans and soils, as well as the ways in which pollutants behave in these media (exemplified by case studies based upon topical environmental problems). It also examines the transfer of pollutants between different environmental compartments, the monitoring of the environment, the ecological and human health effects of chemical pollution, economics and regulatory control. Again case studies are used throughout. This unique

introductory text is essential reading for students on undergraduate and first year postgraduate courses dealing with pollution and environmental chemistry, as well as for scientists and engineers in industry, public service and consultancy who require a basic understanding of environmental processes.

Visible Learning John Hattie 2008-11-19 This unique and ground-breaking book is the result of 15 years research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers – an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

Next Generation Earth Systems Science at the National Science Foundation National Academies of Sciences Engineering and Medicine 2022-06-22 The National Science Foundation (NSF) has played a key role over the past several decades in advancing understanding of Earth's systems by funding research on atmospheric, ocean, hydrologic, geologic, polar, ecosystem, social, and engineering-related processes. Today, however, those systems are being driven like never before by human technologies and activities. Our understanding has struggled to keep pace with the rapidity and magnitude of human-driven changes, their impacts on human and ecosystem sustainability and resilience, and the effectiveness of different pathways to address those challenges. Given the urgency of understanding human-driven changes, NSF will need to sustain and expand its efforts to achieve greater impact. The time is ripe to create a next-generation Earth systems science initiative that emphasizes research on complex interconnections and feedbacks between natural and social processes. This will require NSF to place an increased emphasis on research inspired by real-world problems while maintaining their strong legacy of curiosity driven research across many disciplines ? as well as enhance the participation of social, engineering, and data scientists, and strengthen efforts to include diverse perspectives in research.

History Textbooks American Textbook Council 1994 Based on expert review and research, this book provides an innovative standard and guide to social studies textbooks used in kindergarten through 12th grade classrooms for content, style, and design. The standards provide a foundation for individuals to select satisfactory textbooks and to help educators and school boards in the adoption of instructional materials. Chapter 1 addresses the problems of textbook content and style. Chapter 2 discusses the vast business of social studies publishing and the increased complexity of textbook packaging with the movement away from state-level adoption of textbooks. Chapter 3 focuses on the content of social studies textbooks with a comparison of past and present textbooks, a discussion of revisionism and reality, and a look at religion in textbooks. Chapter 4 examines the style and story of textbooks and finds that although the content of past textbooks may be flawed, the prose is superior to recent textbooks. Ideas on narrative, readability, vocabulary, instructional design, history, and style provide ways for textbooks to improve. Chapter 5 addresses the issue of format and proposes clarity and simplicity in technical design of books. Chapter 6 provides an outline to review textbooks for content and style and instructional activities and teacher guidance materials for usefulness. Chapter 7 includes an annotated list of the major U.S. and world history textbooks. (CK)
