Chapter four of Holt Chemistry, titled “Periodic Table”, provides a detailed overview of the periodic table and its elements. The chapter opens with a dialogue on the characteristics of groups and

periods, clarifying how Russian chemist Mendeleev ordered elements by their atomic weight in increasing order<sup>1</sup>. It then dives into the notion of outer electrons and levels of energy of atoms, emphasizing the function of these electrons in reactions and changes to atomic structures and molecular structures.

The chapter moreover differentiates between transition elements and main group elements, expounding on their characteristics and traits. It also clarifies the concept of energy of ionization and its tendencies among groupings and periodic groups on the periodic table<sup>1</sup>. The chapter converses about atomic and radii, and how these can be predicted based on an atom's position on the periodic table.
