*Effective Implementation of an ISO 50001 Energy Management System (EnMS)*

2013-10-07 Marvin T. Howell You may wonder, "Why do we need ISO 50001 EnMS when we have already implemented ISO 14001 Environmental Management (EMS)?" Energy is part of an EMS. Energy is an aspect that is nonrenewable and a must for every organization to have. In ISO 14001 EMS, it is easy to focus on hazardous materials and aspects that have considerable risk in the workplace. Energy use can be easily overlooked, and even when it is considered for an objective and target (O&T), important questions such as what are the significant energy users (SEUs), what can we do to reduce their impact, and what are the variables that affect energy use are not answered. An ISO 50001 Energy Management System (EnMS) allows an organization to focus on reducing energy consumption through establishing a compelling energy policy, establishing legal and other requirements and ensuring that they are being met, and conducting a comprehensive energy review that identifies energy efficiencies, energy conservation efforts implemented, and O&Ts with energy action plans that, when achieved, moves the organization toward meeting its energy policy. For manufacturing

companies, energy costs impact both the cost to produce the product and the product price. For government organizations, energy reduction is mandated by executive orders. Everyone benefits from reducing energy consumption, from the environment to the economic health of companies. ISO 50001 EnMS can be implemented by itself or with other ISO standards such as 9001, and 14001 or with OHSMS 18000. The choice is yours—let's make this a better place to live and work and with less cost.

*Competing for the Internet*

2017-03-15 Flip Petillion The Internet Corporation for Assigned Names and Numbers (ICANN), founded in 1998, is a not-for-profit public-benefit corporation established to ensure a stable and secure global Internet. As the custodian of the Domain Name System (DNS), one of its key responsibilities is the introduction and promotion of competition in Internet-related markets, an aim which ICANN has tried to achieve through the delegation of generic top-level domains (gTLDs). This book investigates how successful ICANN has been in achieving this goal. Over the years, ICANN has been required to decide on a substantial number of complaints from applicants for gTLDs related to capture, arbitrariness, discrimination, and unwarranted restriction of competition. This book is the first detailed study of complaints related to ICANN decisions that have been brought using ICANN's Independent Review Process (IRP).

*Sample Letter Requesting Iso Documents Pdf Pdf upload Mia j Hayda*

The authors - preeminent expert practitioners in international litigation and arbitration related to Internet governance - take a close look at how ICANN has handled the major issues raised and how ICANN has shaped its own accountability mechanisms. The book also weighs the influence of external accountability on ICANN's decision-making process and considers the implications of third-party decisions (such as IRP decisions) for the ongoing development of the Internet. This authoritative analysis covers: • the regulatory framework governing ICANN and the introduction of new gTLDs in a historic perspective; • ICANN's accountability framework; • all the IRP cases that have been decided to date, with an in-depth analysis of those cases that have become reference decisions in the latest application round; and • the 2016 amendments to ICANN's articles of incorporation and bylaws, concentrating on the problems that remain unresolved. This work is a welcome addition to the debate on how to address the shortcomings in ICANN's accountability in the interests of the global Internet community. The authors make concrete proposals and recommendations, suggesting changes to ICANN's regulatory framework in the light of the lessons learned and with a view to preventing similar problems arising in a next round of gTLD applications. This book has the potential to become the Green Book for fundamental changes to ICANN's accountability framework.

Mystery of the Missing Diamond

It was a gloomy and tempestuous night. The rain was pouring down, and the wind was howling. In the center of the city, there was a exhibition, where a priceless diamond was on display. The diamond was called the African Star, and it was the biggest and most stunning diamond in the world. It was protected by a high-tech security system, and a squad of weaponized guards. No one could steal it, or so they believed. But somebody did. Someone managed to circumvent the security, to avoid the guards, to shatter the pane, and to grab the diamond. And no one saw them, no one overheard them, no one recognized who they were. They exited no mark, no hint, no evidence. They faded into the night, with the African Star.
