Postcolonial Green 2010-08-20 Bonnie Roos Postcolonial Green brings together scholarship bridging ecocriticism and postcolonialism. Since its inception, ecocriticism has been accused of being inattentive to the complexities that colonialism poses for ideas of nature and environmentalism. Postcolonial discourse, on the other hand, has been so immersed in theoretical questions of nationalism and identity that it has been seen as ignoring environmental or ecological concerns. This collection demonstrates that ecocriticism and postcolonialism must be understood as parallel projects if not facets of the very same project--a struggle for global justice and sustainability. The essays in this collection span the globe, and cover such issues as international environmental policy, land and water rights, food production, poverty, women's rights, indigenous activism, and ecotourism. They consider all manner of texts, from oral tradition to literary fiction to web discourse. Contributors bring postcolonial theory to literary traditions, such as that of the United States, not typically seen in this light, and, conversely, bring ecocriticism to literary traditions, such as those of India and China, that have seen little ecological analysis. Postcolonial Green boasts a global geographical breadth, diversity of critical approach, and increasing relevance to the issues we face on a world stage. Handbook of Dynamic System Modeling 2007-06-01 Paul A. Fishwick The topic of dynamic models tends to be splintered across various disciplines, making it difficult to uniformly study the subject. Moreover, the models have a variety of representations, from traditional mathematical notations to diagrammatic and immersive depictions. Collecting all of these expressions of dynamic models, the Handbook of Dynamic System Modeling explores a panoply of different types of modeling methods available for dynamical systems. Featuring an interdisciplinary, balanced approach, the handbook focuses on both generalized dynamic knowledge and specific models. It first introduces the general concepts, representations, and philosophy of dynamic models, followed by a section on modeling methodologies that explains how to portray designed models on a computer. After addressing scale, heterogeneity, and composition issues, the book covers specific model types that are often characterized by specific visual- or text-based grammars. It concludes with case studies that employ two well-known commercial packages to construct, simulate, and analyze dynamic models. A complete guide to the fundamentals, types, and applications of dynamic models, this handbook shows how systems function and are represented over time and space and illustrates how to select a particular model based on a specific area of interest.

Protecting All 2019-10-04 Truman Packard "Socially inclusive growth is the talk of the town in developing countries. But to go from talk to walk these countries face a critical task: reconstructing their welfare states given the failures of the standard Bismarckian model and the challenges posed by rapid technological change. This book—known to many as the White Paper—is indispensable for tackling this task. It develops a clear conceptual framework to help policy makers understand this complex issue, set clear objectives, evaluate trade-offs, and chart a coherent path of reform. A much-needed and very welcome contribution." --Santiago Levy, Senior Fellow—Global Economy and Development, Brookings Economic and Social Policy in Latin America Initiative, Brookings Institution "Most countries have failed to support people adequately as the combination of globalization and technology changes the structure of their economies and their jobs. This has fostered a backlash in which economic insecurity is widespread and support for populist policies is on the rise. We can do much better than this by sharing risks and providing a guaranteed minimum to everyone. This important book lays out a set of policies that strikes a new balance between economic flexibility and individual security that is relevant to both advanced and developing countries." --Minouche Shafik, Director, London School of Economics and Political Science "Economic insecurity confronts working people around the world today. To overcome this insecurity through suitable risk-sharing interventions is a policy challenge of the first order. This exceptionally thoughtful and clearly written book charts a course for replacing employment-based risk-sharing policies with social insurance†-based ones, financed by general revenues with the broadest possible base. The resultant Flexicurity model promises 'a more robust and resilient policy response to a diverse and fluid world of work.' " --Gary Fields, Professor of International and Comparative Labor and Professor of Economics, Cornell University "Protecting All presents thoughtful, thorough, and bold proposals to achieve universal social protection in a modern welfare state. This lucid document identifies implementable policies for poverty prevention, coping with livelihood shocks, and managing labor market risks that range from state-guaranteed publicly funded income floors to mandated consumption-smoothing mechanisms funded by individual contributions to privately financed incentivized and purely voluntary consumption-smoothing schemes. Clearly written, rich with ideas, and relevant for countries at all income levels, Protecting All is bound to become an essential reference for policy makers and policy analysts focused on (re)designing social protection systems that achieve key social goals in ways consistent with fast-changing labor markets, fiscal sustainability, and economic efficiency and growth." --Nora Lustig, Professor of Latin American Economics and Director of the Commitment to Equity Institute, Tulane University

Slow Violence and the Environmentalism of the Poor 2011-06-01 Rob Nixon The violence wrought by climate change, toxic drift, deforestation, oil spills, and the environmental aftermath of war takes place gradually and often invisibly. Using the innovative concept of "slow violence" to describe these threats, Rob Nixon focuses on the inattention we have paid to the attritional lethality of many environmental crises, in contrast with the sensational, spectacle-driven messaging that impels public activism today. Slow violence, because it is so readily ignored by a hard-charging capitalism, exacerbates the vulnerability of ecosystems and of people who are poor, disempowered, and often involuntarily displaced, while fueling social conflicts that arise from desperation as life-sustaining conditions erode. In a book of extraordinary scope, Nixon examines a cluster of writer-activists affiliated with the environmentalism of the poor in the global South. By approaching environmental justice literature from this transnational perspective, he exposes the limitations of the national and local frames that dominate environmental writing. And by skillfully illuminating the strategies these writer-activists deploy to give dramatic visibility to environmental emergencies, Nixon invites his readers to engage with some of the most pressing challenges of our time.

How People Learn II 2018-09-27 National Academies of Sciences, Engineering, and Medicine There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, How People Learn: Brain, Mind, Experience, and School: Expanded Edition was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. How People Learn II: Learners, Contexts, and Cultures provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. How People Learn II will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

John Warwick Montgomery's Legal Apologetic 2016-01-22 Ross Clifford Dr Montgomery is one of our leading Christian apologists. His writings have influenced several generations of apologists from around the globe. His debates are legendary. This book purports to break new ground apologetically as it assesses Dr Montgomery's work. It focuses on his legal/historical apo- logetic and in the process reframes it for both for the 'tough minded' and the 'tender hearted'. It shows not only the rationality of Montgomery's work but also that his writings pave the way for an apologetic to New Age follo- wers and to those who place experience before reason. A special feature of this analysis concerns Montgomery's apologetic insights on the occult and paganism. This book also breaks new ground as the legal apologetic model has not been previously assessed; it illustrates that a juridical apologetic style has a rich history dating back to the Gospels themselves. The present work should thus be of particular interest to apologists, theologians, philosophers of religion, pastors, and all who are concerned to share the legal/ historical fact of the Resurrection of Jesus - together with its relevance - in a secular age.

Brands of Faith 2007-09-14 Mara Einstein In a society overrun by commercial clutter, religion has become yet another product sold in the consumer marketplace, and faiths of all kinds must compete with a myriad of more entertaining and more convenient leisure activities. Brands of Faith argues that in order to compete effectively faiths have had to become brands – easily recognizable symbols and spokespeople with whom religious prospects can make immediate connections. Mara Einstein shows how religious branding has expanded over the past twenty years to create a blended world of commerce and faith where the sacred becomes secular and the secular sacred. In a series of fascinating case studies of faith brands, she explores the significance of branded church courses, such as Alpha and The Purpose Driven Life, mega-churches, and the popularity of the televangelist Joel Olsteen and television presenter Oprah Winfrey, as well as the rise of Kaballah. She asks what the consequences of this religious marketing will be, and outlines the possible results of religious commercialism – good and bad. Repackaging religion – updating music, creating teen-targeted bibles – is justifiable and necessary. However, when the content becomes obscured, religion may lose its unique selling proposition – the very ability to raise us above the market.

The Mathematics of Life 2011-06-07 Ian Stewart Biologists have long dismissed mathematics as being unable to meaningfully contribute to our understanding of living beings. Within the past ten years, however, mathematicians have proven that they hold the key to unlocking the mysteries of our world -- and ourselves. In The Mathematics of Life, Ian Stewart provides a fascinating overview of the vital but little-recognized role mathematics has played in pulling back the curtain on the hidden complexities of the natural world -- and how its contribution will be even more vital in the years ahead. In his characteristically clear and entertaining fashion, Stewart explains how mathematicians and biologists have come to work together on some of the most difficult scientific problems that the human race has ever tackled, including the nature and origin of life itself.

How People Learn 2000-08-11 National Research Council First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Paradise Discourse, Imperialism, and Globalization 2009-12-04 Sharae Deckard This comparative study, the first of its kind, discusses paradise discourse in a wide range of writing from Mexico, Zanzibar, and Sri Lanka, including novels by authors such as Malcolm Lowry, Leonard Woolf, Juan Rulfo, Wilson Harris, Abdulrazak Gurnah, and Romesh Gunsekera. Tracing dialectical tropes of paradise across the "long modernity" of the capitalist world-system, Deckard reads literature from postcolonial nations in context with colonial discourse in order to demonstrate how paradise begins as a topos motivating European exploration and colonization, shifts into an ideological myth justifying imperial exploitation, and finally becomes a literary motif used by contemporary writers to critique neocolonial representations and conditions in the age of globalization. Combining a range of critical perspectives--cultural materialist, ecocritical, and postcolonial--the volume opens up a deeper understanding of the relation between paradise discourse and the destructive dynamics of plantation, tourism, and global capital. Deckard uncovers literature from East Africa and South Asia which has been previously overlooked in mainstream postcolonial criticism, and gestures to how the utopian dimensions of the paradise myth might be reclaimed to promote cultural resistance.

Plunder 2008-03-17 Ugo Mattei Plunder examines the dark side of the Rule of Law and explores how it has been used as a powerful political weapon by Western countries in order to legitimize plunder -- the practice of violent extraction by stronger political actors victimizing weaker ones.
