Chapter 4 of the Holt Chemistry textbook, titled “Periodic Table”, provides a thorough overview of the periodic table and its elements. The chapter starts with a discussion on the characteristics of groups and periods, explaining how the Russian chemist Dmitri Mendeleev ordered elements by their weight in increasing order¹. It then dives into the concept of outer electrons and levels of energy of atoms, highlighting the function of valence electrons in reactions and transformations to atomic structures and molecules.

The chapter further separates between transition elements and main group elements, elaborating on

their features and characteristics. It also explains the concept of energy of ionization and its tendencies among groupings and periodic groups on the table of elements¹. The chapter converses about atomic and radii, and how these can be anticipated based on an element's location on the table of elements.

Electronegativity, which measures an atom's tendency to pull a bonding pair of electrons, is another key theme covered in this part¹. The chapter finishes with a conversation on the relationship diagonally, metallic character, and boiling point of components.

In terms of practice questions, the chapter provides a variety of practice questions and test preparation materials to strengthen the concepts learned. These questions cover a range of themes, from comprehending the arrangement of elements to investigating the tendencies in the table of elements.
