Transportation Management with SAP TM 9 2014-08-07 Jayant Daithankar The implementation of a TMS solution is a highly complex and mission critical project. If executed correctly a good TMS can deliver a number of benefits to the organization in terms of optimization, greater efficiency, reduced errors and improved revenue through accurate invoicing. However a number of projects fail to realize these benefits for a host of reasons such as an incorrect product selection, over customization of the system and lack of detailed processes. The evaluation

and selection of the right transportation management system is a very critical step in the successful implementation of a TMS product as well as ensuring that the organization is able to realize the benefits expected from the system. Transportation Management with SAP TM 9 is a guide for CIO/CXOs evaluating options for various transportation management solutions available in the market and helps inappropriate decision making before committing investment. A proven evaluation framework and guidance provided in the book can help decision makers with product selection and help to create a business case for management approval and design a future roadmap for the organization. The book provides a comprehensive understanding of what SAP transportation management is and is useful for teams involved in TM Implementation and roll outs to ensure preparation. The

book explains end-to-end freight life cycle processes, functional system landscape, implementation challenges and post go-live precautions required to optimize investments in SAP TM. Transportation Management with SAP TM 9 also acts as a step by step implementation guide with details of configuration required to set up a TM9 system. This book also covers the upgrade of SAP TM8 to SAP TM9 which will be useful for existing clients who are on TM 8. Nonavailability of SAP TM skilled resources is a major challenge faced by organizations and the book provides a detailed competency building plan along with skill set requirements to create a competent and trained workforce to manage-transformation. The current book available in the market on SAP TM is based on Version 6 release which does not cover air freight processes. Our book covers

end-to-end air freight configuration scenarios for logistic companies.

Global Risk-Based Management of Chemical Additives II 2012-11-27  
Bernd Bilitewski Chemical additives are used to enhance the properties of many industrial products. Since their release into the environment is a potential risk for man and nature, their fate and behavior have been investigated in the framework of the European

Union-funded project RISKCYCLE. The results are presented in two volumes, Global Risk-Based Management of Chemical Additives I: Production, Usage and Environmental Occurrence and Global Risk-Based Management of Chemical Additives II: Risk-Based Assessment and Management Strategies. This book is the second of the two volumes and features two main parts. In the first part, experts in the field discuss different models related to the assessment of the potential risks posed by chemical additives and analyze their benefits and drawbacks. In the second part, specific case studies in which the models have been applied are presented and the reliability of the models is evaluated. This volume is an invaluable source of information for scientists and governmental agencies dealing with the risk assessment of chemicals on a global scale.

Enterprise Resource Planning for Global Economies: Managerial Issues and Challenges 2008-04-30 Ferran, Carlos

Local functional systems that create inefficient islands of information are being replaced by expensive enterprise-wide applications that unify the functional areas; however, while we have not yet been able to completely and seamlessly integrate across functions, we find that the new islands of information are no longer functional but political, cultural, linguistic, and geographical. The global village is a reality and enterprise resource planning (ERP) implementations face new issues and challenges.

Enterprise Resource Planning for Global Economies: Managerial Issues and Challenges provides authoritative research on the theoretical frameworks and pragmatic discussions on global implementations of information systems,

particularly ERP systems. This book offers professionals, managers, and researchers, who want to improve their understanding of the issues and challenges that arise when information systems cross national boundaries, with an authoritative, essential research resource.

Tax Law and Digitization  
2022-07-04 Michael Lang  
Tax tech companies are rapidly gaining ground as global tax advisory firms, and are set to fundamentally change and revolutionize the way tax administrations, taxpayers, and their advisers interact, ushering in a much more efficient and effective

integration of tax services into the processes used by both taxpayers and tax authorities. The distinguished contributors to this book clearly explain not only how tax law can be revised to promote digitization and speed up its implementation but also how to achieve better tax compliance and administration at a lower cost. The authors cover such aspects of this veritable paradigm shift in tax management as the following: how new technologies improve existing VAT/GST systems; uses of artificial intelligence; secured certification of taxpayers; electronic invoices; securing real-time reporting with cryptography; taxing virtual currencies; enhanced personal data protection; fewer opportunities to engage in aggressive tax practices; competitive advantage in attracting investment; workflow assessment; and more opportunities for information

flows and collaboration. Because the perspective as to what is meant by tax compliance is already overlaid by technological pressure—as indicated especially by BEPS 1.0’s domestic tax law initiatives and its recommendations of newly developed options to secure full transparency of tax processes—it is clear that controls and tax risk management are on the rise and that systems will become more digitized. For these reasons, professionals in the tax advisory industry and tax authority officials will welcome this book’s sound and practical measures leading to progress and revitalization through digital transformation.

### Limiting Base Erosion

2017-08-30 Erik Pinetz

Limiting base erosion from different viewpoints Hybrid mismatch arrangements, CFC rules, transfer pricing rules: "Limiting Base Erosion", the general topic for the master theses of the part-time LL.M. program 2015-2017, has been one of the most controversial topics in international tax law ever since the initiation of the OECD BEPS Project in 2013. Even though the final reports of the 15 BEPS Actions were released by the OECD in as early as October 2015, the question how to effectively target base erosion practices still has not lost any of its topicality. Following the efforts of the OECD in developing a new international tax environment, the focus of attention has now partly

shifted to the OECD Member countries that have to properly implement the OECD recommendations in their domestic laws as well as in their tax treaty practice. In this respect, a comprehensive analysis in the literature of all the issues related to base erosion proves to be of the utmost importance in order to provide practical guidance to the Member countries during that the process of implementation. This book deals especially with four key areas of interest: Limiting base erosion by neutralizing the effects of hybrid mismatch arrangements Limiting base erosion by strengthening CFC rules Measures against base erosion via interest deductions and other financial payments Limiting base erosion by improving transfer pricing rules. On that basis, 27 concrete topics were chosen in order to address the four key areas of interest from different viewpoints. Base erosion from
