The Maelstrom

2012-10-23 Henry H. Neff The world is at the brink of ruin . . . or is it salvation? Astaroth has been weakened, and the demon Prusias

is taking full advantage of the situation to create an empire of his own. His formidable armies are on the move, and Rowan is in their sights. Rowan must rely on Max McDaniels and David Menlo and hope that their combined powers can stop Prusias's war machine before it's too late. But even as perils loom, danger stalks their every move. Someone has marked Max for death and no one is above suspicion. Should the assassins succeed, Rowan's fate may depend on little Mina whose abilities are prodigious but largely untested. And where is Astaroth? Has he fled this world or is he biding his time, awaiting his next opportunity? In the Tapestry's fourth book, author-illustrator Henry H. Neff boldly raises the stakes in an epic tale of mankind's struggle to survive in a world now populated by demons and demigods and everything in between!

Using R for Introductory Statistics

2018-10-03 John Verzani The second edition of a bestselling textbook, Using R for Introductory Statistics guides students through the basics of R, helping them overcome the sometimes steep learning curve. The author does this by breaking the material down into small, task-oriented steps. The second edition maintains the features that made the first edition so popular, while updating data, examples, and changes to R in line with the current version. See What's New in the Second Edition: Increased emphasis on more idiomatic R provides a grounding in the functionality of base R. Discussions of the use of RStudio helps new R users avoid as many pitfalls as possible. Use of knitr package makes code easier to read and therefore easier to reason about. Additional information on computer-intensive approaches motivates the traditional approach. Updated examples and data make the information current and topical.

The book has an accompanying package, UsingR, available from CRAN, R's repository of user-contributed packages. The package contains the data sets mentioned in the text (`data(package="UsingR")`), answers to selected problems (`answers()`), a few demonstrations (`demo()`), the errata (`errata()`), and sample code from the text. The topics of this text line up closely with traditional teaching progression; however, the book also highlights computer-intensive approaches to motivate the more traditional approach. The authors emphasize realistic data and examples and rely on visualization techniques to gather insight. They introduce statistics and R seamlessly, giving students the tools they need to use R and the information they need to navigate the sometimes complex world of statistical computing.

Stats: Data and Models, Global Edition

2016-09-29 Paul Velleman Richard De Veaux, Paul Velleman, and David Bock wrote Stats: Data and Models with the goal that students and

instructors have as much fun reading it as they did writing it. Maintaining a conversational, humorous, and informal writing style, this new edition engages students from the first page. The authors focus on statistical thinking throughout the text and rely on technology for calculations. As a result, students can focus on developing their conceptual understanding. Innovative Think/Show/Tell examples give students a problem-solving framework and, more importantly, a way to think through any statistics problem and present their results. Understanding by Design

2005 Grant Wiggins What is understanding and how does it differ from knowledge? How can we determine the big ideas worth understanding? Why is understanding an important teaching goal, and how do we know when students have attained it? How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today's high-stakes, standards-based environment? Authors Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of Understanding by Design. Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998, the authors have greatly revised and expanded their original work to guide educators across the K-16 spectrum in the

design of curriculum, assessment, and instruction. With an improved UbD Template at its core, the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks. Readers will learn why the familiar coverage- and activity-based approaches to curriculum design fall short, and how a focus on the six facets of understanding can enrich student learning. With an expanded array of practical strategies, tools, and examples from all subject areas, the book demonstrates how the research-based principles of Understanding by Design apply to district frameworks as well as to individual units of curriculum. Combining provocative ideas, thoughtful analysis, and tested approaches, this new edition of Understanding by Design offers teacher-designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike.

The Journey of a Thousand Miles

He was tired of his life. He was bored, unhappy, and unfulfilled. He had a job he hated, a boss he despised, and a girlfriend he didn't love. He had no passion, no purpose, no meaning. He felt like he was wasting his time, his potential, his existence. He wanted to change, he wanted to escape, he wanted to live. He decided to quit his job, to break up with his girlfriend, to sell his belongings, and to buy a one-way ticket to the other side of the world. He didn't know where he was going, he didn't know what he was doing, he didn't know what he was looking for. He only knew that he had to go, that he had to explore, that he had to discover. He embarked on a journey of a thousand miles, a journey of adventure, of challenge, of learning, of growth, of transformation.
