Temporal Logic-based Reactive Mission and Motion Planning

WebAbstract—Given a robot model, a class of admissible environments and a high level task or behavior for the robot, this paper provides a framework for automatically generating a hybrid controller that guarantees the robot can achieve its task.

[Reactive Controller Synthesis for Mobile Robotics](#)

WebOften linear temporal logic is used to describe the desired behaviour of a robot. Once the specification or environment is complex enough, generating a controller based on that specification can be time intensive. In order to approach this problem, Schmuck and Majumdar have introduced a formalism and algo-

A Really Temporal Logic - Stanford University

WebAbstract. We introduce a real-time temporal logic for the specification of reactive systems. The novel feature of our logic, TPTL, is the adoption of temporal operators as quantifiers over time variables; every modality binds a variable to the time(s) it refers to. TPTL is demonstrated to be both a natural specification lan-

WebABSTRACT. We present a counterexample-guided inductive synthesis approach to controller synthesis for cyber-physical systems subject to signal temporal logic (STL) specifications, operating in potentially adversarial nondeterministic environments.

Reactive and Risk-Aware Control for Signal Temporal Logic

WebSignal temporal logic (STL) is a predicate-based temporal logic that offers many appealing advantages [1]. In particular, STL allows to impose quantitative temporal properties, e.g., combinations of surveillance ("visit regions A, B, and C every 10 60 sec"), safety ("always between 5 25 sec

stay at least 1 m away from D"), and many others.
