The field of Engineering Economics and Cost Estimation is a vital aspect of any engineering project. It involves present and future economic factors, making it essential to obtain accurate estimates of future costs, benefits, and other economic parameters. Engineers often deal with projects whose scale, complexity, and uncertainty call for complex approaches to planning and budgeting[2][1]. A number of methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates[1][2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Several models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate generally increases as the resources allocated to developing the estimate increase.

The work "Analyzing Casual Conversation" by Suzanne Eggins and Diana Slade, first released in 1997, develops a organized model for the study and description of casual conversation in English. The writers contend that despite its occasionally aimless seeming and apparently unstructured content, casual conversation is a very structured task and has a crucial role in the social building of reality. The book works through authentic samples of casual conversations involving participants differing in age, gender, ethnicity, and socio-economic class[2]. Pulling on insights from sociology, linguistics, and critical semiotics, the book provides readers with the examinative skills to portray the layers of structure and critical interpretive models to explain the 'social work' that goes on through chat.
