Saddened that they may not be able to go home for Christmas, the girls and Miss Clavel take to their beds. But on Christmas Eve, the adventure begins when there is a knock at the front door. Expecting to see Santa, Madeline meets the Rug Merchant who has brought twelve very special rugs. He reminds Madeline that Christmas is the time of miracles, and that these are not ordinary rugs! Soon everyone wakes up feeling healthy. The Rug Merchant shows them that they each have a magic carpet and that they can fly home to be with their families for Christmas! After saying goodbye to the girls, Miss Clavel finds a present that the girls left for her, befriends a little mouse, and counts her many blessings singing: "Everything Is Right Tonight." Behind the madelines christmas pdf pdf-There are basically two types of diabetes that will affect an adolescent. It is type 1 diabetes and type 2 diabetes. Type 1 diabetes affects the immune system's function as the systems attacks the pancreas' insulin producing cells, also known as the beta cells. Because of this, the pancreas loses the ability to manufacture insulin. This is the reason why people with type 1 diabetes take insulin everyday. The symptoms are weight loss, increase in urination & thirst, blurred vision, tiredness and constant hunger. And if the adolescent isn't treated at the right time, he/she can slip in to diabetic coma which can endanger his/her life. In type2 diabetes, the body is incapable of properly using the insulin produced by the body and requires insulin from an external source, too. The symptoms of type 2 diabetes are similar to type 1 diabetes. The teenager feels sick, tired, nauseated, and thirsty. The wounds will recover very slowly; he/she will get infections frequently, will develop blurred vision and will experience weight loss.

Parents play a vital role in determining the problem. They should constantly observe their child for eating disorders or signs of depression. Although cigarette, drugs and alcohol should be avoided by all adolescents and children, it is even more important that youngster with diabetes should stay away from these things as they can worsen the situation. A person with diabetes, who switches to smoking, is at risk of developing cardiovascular diseases and circulatory problems. Consumption of alcohol can cause hypoglycemia or low blood sugar. It is the duty of the parents to make their child aware of the possible risk they would face if they start to smoke, drink alcohol or take drugs.

Children and adolescents, who have diabetes, face many challenges while trying to lead a normal life. They have to think twice before doing simple things as going to a party, playing sports and even when staying over with friends. This is because they require to intake oral medication or insulin. Their blood sugar level must be checked many times through out the day. Also, at gatherings, they have to avoid many food items. Because of this they will feel different from the crowd and can feel left out. Not only does diabetes pose behavioral challenges, but also emotional challenges.

Acupuncture and Autism

Studies have shown that there is an increase in the number of children that have been diagnosed with autism. Until now, doctors have not yet found a cure to this illness which is why some parents want to experiment with alternative forms of treatment and one example is acupuncture.

Acupuncture is a holistic approach in treating and preventing certain diseases. Its main tool are very thin needles that are inserted to targeted points in the body. The body has about 400 of them linked through a system known as meridians or pathways. Once these are stimulated, these are supposed to create balance in the body.

Autism on the other hand is a brain disorder that is long term. This disease is characterized by deficits in language, social communication and cognition. Children who are diagnosed with this illness may also suffer from secondary problems such as aggression, irritability, stereotypes, hyperactivity, negativism, volatile emotions, temper tantrums, short attention span and obsessive-compulsive behavior.

Fifth, medical doctors do not believe in the potential of alternative medicine. This is not true because there are more doctors these days that are open to the idea that there are other ways to help patients aside from conventional medicine. In fact, some of them even recommend an acupuncturist if they know that what they have done is not effective.

Another myth is that every patient will undergo the four needle technique. This is not true and it will only be used when the specialist feels that the energy of the patient is virtually not moving as a last resort.

The seventh myth is that it is better for a medical doctor to perform acupuncture. This is wrong because the training is much different than that taught in medical school. Students who have an acupuncturist license train for 3,000 hours before they are allowed to practice this profession. So between an acupuncturist and a medical doctor, you should go with someone who has learned about this much longer.

As a result, various schools have been built and those who want to become licensed acupuncturists are now able to practice their profession.

Despite that, there were a lot of people who are not yet convinced on the positive effects of alternative forms of medication. It was only in 1995 that the US Food and Drug Administration decided to classify the needles used for acupuncture as medical instruments and assured the public that they are both safe and effective.

To further promote acupuncture, the NIH or National Institute of Health in 1997 has stated that this technique is very useful in treating various health conditions. These include ear, nose, throat, respiratory, gastrointestinal, eye, nervous system and muscular disorders. In some cases, acupuncture is able to prevent some of them from happening.

Nicotine is the addictive and toxic substance present in a cigarette. This is the same substance that makes quitting a big challenge for most smokers. The nicotine that you get from smoking will attach itself to the pleasure areas in the brain, making it hard for you to stop. Without a steady stream of this substance, a smoker will tend to feel depressed and uncomfortable.

People who have undergone acupuncture treatment reported that they no longer find cigarettes as tempting or as satisfying. Oftentimes, smoking would leave an awful taste in their mouths prompting them to stop their habit for once. Some patients would even resort to eating mints or lozenges to clear to get rid of the terrible aftertaste.

According to skilled practitioners, approximately 7 out of 10 smokers will successfully extricate themselves from their smoking habit after 2 or 3 weeks. While the others are unable to quit totally, these smokers will be able to cut down on their cigarette consumption quite significantly.

Heart pumps out blood, so that oxygen can reach to different parts of the body via blood. The pressure with which heart pumps blood is known as blood pressure. The blood pressure comprises of two measures, the systolic pressure and diastolic pressure. Systolic pressure is the larger figure and represents the pressure within the artery of the heart, when contractions take place which pump blood to different parts of the body. Diastolic pressure is the pressure within the artery of the heart, when the blood is filling in the heart and it is at rest. Both the pressures are measured in millimeters of mercury or mmHg. High blood pressure is abnormal increase in systolic pressure or diastole pressure.

Blood pressure is measured by putting a blood pressure cuff on the arm and placing a stethoscope on the chest. There can be very little variation in blood pressure depending upon the time, emotional moods, age, gender, weight, height, physical activity, stress and other illness such as heart disease and kidney disease. Children and adolescents become anxious when they visit the doctor. This is also an important factor which affects the blood pressure and the readings taken get tampered because of it. That is the reason why many blood pressure readings are taken in order to determine whether the adolescent has high blood pressure or not. The nurse may even ask the adolescent to calm down while taken the readings. Time gap is given between each reading, so as to give time to the adolescent to calm down. Emotions can also affect the blood pressure reading.
